

HIGH PERFORMANCE & EASE OF USE

Compact Size : $\phi 5.4\text{mm}$ $\phi .213\text{inch}$

The **UZQ26** is just 5.4mm .213inch in diameter, the smallest in existing DC two-wire sensors. It saves you space.

Long Sensing Range

UZQ2 series makes possible long sensing ranges. This decreases the likelihood of a workpiece and sensor hitting each other.

UZQ2210

Two-color indicator

Approach ON type has a Two-color indicator. (Leave ON type has Operation indicator.) Also, it is possible to confirm the operation from any angle because the indicator is built into the cable strain relief.

Increased Tightening Torque

Higher tightening torque is allowed because of the thick case. Higher torque can prevent loosening from vibration or shock.

UZQ2300

80N·m max.

Wire-saving

The wiring cost is considerably reduced as it has only two wires.

Additionally, each of the **UZQ22**, **UZQ23**, **UZQ24** is available as the pig-tailed model (300mm 11.811inch-long cable attached with the connector) that makes replacement easier and quicker.

Low current consumption

Current consumption is reduced to Max. 0.8mA. When connecting to PLC, it is not necessary to use a separate power supply for the sensor.

Separate power supply is not required.

APPLICATIONS

Pass sensing of aluminum pallets

It can reliably detect even aluminum pallets because of the long sensing range.

Positioning of working machines

By detecting dog-clutch, the sensor finds the depth of working holes

Presence sensing of workpieces

It can be used in oil mist.

ORDER GUIDE

Type	Appearance (mm inch)	Sensing range (*1)	Model No.	Output operation
Shielded type	Cylindrical type 	(1.5mm) (.059inch) Rated sensing range	UZQ2600	Approach ON
		1.2mm .047inch Normal sensing range	UZQ2601	Leave ON
	Threaded type 	(2mm) (.079inch)	UZQ2100	Approach ON
		1.6mm .063inch	UZQ2101	Leave ON
		(3mm) (.118inch)	UZQ2200	Approach ON
		2.4mm .094inch	UZQ2201	Leave ON
		(7mm) (.276inch)	UZQ2300	Approach ON
		5.6mm .220inch	UZQ2301	Leave ON
		(10mm) (.394inch)	UZQ2400	Approach ON
		8mm .315inch	UZQ2401	Leave ON
Non-shielded type	Threaded type 	(4mm) (.157inch)	UZQ2110	Approach ON
		3.2mm .126inch	UZQ2111	Leave ON
		(8mm) (.315inch)	UZQ2210	Approach ON
		6.4mm .252inch	UZQ2211	Leave ON
		(15mm) (.591inch)	UZQ2310	Approach ON
		12mm .472inch	UZQ2311	Leave ON
		(22mm) (.866inch)	UZQ2410	Approach ON
		17.6mm .693inch	UZQ2411	Leave ON

(*1): The rated sensing range is indicated as the maximum sensing range for a standard target.

The normal setting range is indicated as the sensing range at which the sensor can stably detect the standard target even if there is an ambient temperature drift or supply voltage fluctuations (within specified ranges).

Pigtailed type

The pigtailed sensors are optionally available, that 300mm 11.811inch long cable intermediates between the sensor and the connector. (Standard type is attached with the cable 2m 6.562ft. long. No pigtail option with the **UZQ26**, **UZQ21**.)

When ordering this type, add suffix. "A" at the end of the model No.

(e.g.) The model **UZQ2200** with pigtailed is identified as "**UZQ2200A**".

• Mating cable

Model No.	Description	
UZC8231	Length 2m 6.562ft.	Two of four wires are used. The arrangement of wires varies in types, Approach ON or Leave ON.
UZC8232	Length 5m 16.404ft.	

OPTION

Component	Model No.	Description	
Sensor mounting bracket	UZQ841	For UZQ260	The sensor is simply mountable with it.
	UZQ821	For UZQ220	It protects the sensing surface from welding sparks (spatter), etc.
Protective cover	UZQ822	For UZQ230	
	UZQ823	For UZQ240

(*1): The rated sensing range is indicated as the maximum sensing range for a standard target.

The normal setting range is indicated as the sensing range at which the sensor can stably detect the standard target even if there is an ambient temperature drift or supply voltage fluctuations (within specified ranges).

(*2): It is the leakage current when the output is in the OFF state.

(*3): Maximum load current varies depending on the ambient temperature. Refer to **TYPICAL WIRING DIAGRAMS** for more details.

(*4): When the cable is extended, the residual voltage becomes larger depending on the type of cable.

(*5): The weight is the value including the nut and toothed lock washer.

TYPICAL WIRING DIAGRAMS

UZQ2□□□

Symbol ... Zd: Surge absorption zener diode
Tr: PNP output transistor

(*1): Maximum load current varies depending on the ambient temperature.

Conditions for the load

- 1) Load should not be actuated by the leakage current in the OFF state (0.8mA).
- 2) Load should be actuated by (supply voltage-3V) in the ON state.
- 3) Current in the ON state should be between 3 to 70mA DC.
[Bleeder resistance must be connected so that the current can be 3mA or more if it is less than 3mA.]

TYPICAL WIRING DIAGRAMS

(*2): The 0V wire is identified as White/2 with the UZQ2□□1A Approach ON sensor.

Wiring diagram

Conditions for the load

- 1) A load should not be actuated by the leak current (0.8mA) in the OFF state.
- 2) A load should be actuated at (supply voltage-3V) in the ON state.
- 3) The current in the ON state should be between 3 to 70mA DC.
[In case the current is less than 3mA, connect a bleeder resistance in parallel to the load so that the current flows at 3mA or more.]

SENSING FIELDS

These are typical sensing fields, which may vary slightly from unit to unit.

UZQ2600 UZQ2601

Sensing field

Target size - Sensing range correlation

Note that the sensing range decreases if the target is smaller than the standard size (iron steel 6×6×1mm .236×.236×t.039inch) as shown in the graph on the left.

SENSING FIELDS

These are typical sensing fields, which may vary slightly from unit to unit.

UZQ2100 UZQ2101

Sensing field

Target size - Sensing range correlation

Note that the sensing range decreases if the target is smaller than the standard size (iron steel $8 \times 8 \times 1\text{mm}$ $.315 \times .315 \times t.039\text{inch}$) as shown in the graph on the left.

UZQ2200 UZQ2201

Sensing field

Target size - Sensing range correlation

Note that the sensing range decreases if the target is smaller than the standard size (iron steel $12 \times 12 \times 1\text{mm}$ $.472 \times .472 \times t.039\text{inch}$) as shown in the graph on the left.

UZQ2300 UZQ2301

Sensing field

Target size - Sensing range correlation

Note that the sensing range decreases if the target is smaller than the standard size (iron steel $18 \times 18 \times 1\text{mm}$ $.709 \times .709 \times t.039\text{inch}$) as shown in the graph on the left.

UZQ2400 UZQ2401

Sensing field

Target size - Sensing range correlation

Note that the sensing range decreases if the target is smaller than the standard size (iron steel $30 \times 30 \times 1\text{mm}$ $1.181 \times 1.181 \times t.039\text{inch}$) as shown in the graph on the left.

SENSING FIELDS

These are typical sensing fields, which may vary slightly from unit to unit.

UZQ2110 UZQ2111

Sensing field

Target size - Sensing range correlation

Note that the sensing range decreases if the target is smaller than the standard size (iron steel $20 \times 20 \times t1\text{mm}$ $.787 \times .787 \times t.039\text{inch}$) as shown in the graph on the left.

UZQ2210 UZQ2211

Sensing field

PRECAUTIONS FOR PROPER USE

These products are **not** safety sensors and are **not** designed or intended to be used to protect life and prevent bodily injury or property damage.

Mounting

Tightening torque should be the value as shown below.

Mounting with machine screw

[Cylindrical type]

- Use a machine screw M4 or less and tighten it as the indented head of the screw thrusts on the side wall of the sensor. Do not fix it at the tail where the indicator is located.

Model No.	A (mm inch)	B (mm inch)	Tightening torque
UZQ260□	5 to 30 .197 to 1.181	3 .118	0.78N·m {8kgf·cm}

Mounting with nut

[Shielded type]

[Non-shielded type]

Model No.	Dimension of C (mm inch)	Tightening torque
UZQ210□	3 to 10.3 .118 to .406	5.9N·m{60kgf·cm} or less
	10.3 .406 or more	11.8N·m{120kgf·cm} or less
UZQ220□	3.5 to 13.5 .138 to .531 or more	10N·m{102kgf·cm} or less
	13.5 .531 or more	20N·m{204kgf·cm} or less
UZQ230□	4 to 18 .157 to .709	45N·m{459kgf·cm} or less
	18 .709 or more	80N·m{816kgf·cm} or less
UZQ240□	5 to 21 .197 to .827	80N·m{816kgf·cm} or less
	21 .827 or more	180N·m{1,836kgf·cm} or less
UZQ211□	12 .472 or more	11.8N·m{120kgf·cm} or less
UZQ221□	15 .591 or more	20N·m{204kgf·cm} or less
UZQ231□	25 .984 or more	80N·m{816kgf·cm} or less
UZQ241□	30 1.181 or more	180N·m{1,836kgf·cm} or less

(*1): The nut should be threaded completely onto the sensor.

Distance from the surrounding metals

As the metal around the sensor may affect the sensing performance, pay attention to the following points.

Influence of surrounding metal

If there are metals near the sensor, it may affect the sensing ability. Keep them the minimum distance away specified below.

Model No.	D (mm inch)
UZQ260□	4.5 .177
UZQ210□	4.5 .177
UZQ220□	8 .315
UZQ230□	20 .787
UZQ240□	40 1.575
UZQ211□	8 .315
UZQ221□	22 .866
UZQ231□	45 1.772
UZQ241□	75 2.953

Embedding of the sensor in metal

Sensing range may decrease if the sensor is completely embedded in metal. Especially for the non-shielded type, maintain the following distances.

Model No.	E (mm inch)	F (mm inch)
UZQ260□	φ12 .472	3 .118
UZQ211□	φ24 .945	12 .472
UZQ221□	φ50 1.969	15 .591
UZQ231□	φ75 2.953	25 .984
UZQ241□	φ105 4.134	30 1.181

(*1): Non-shielded type's sensing distance may vary depending on position of nut.

Crosstalk prevention

When mounting multiple proximity sensors close together, maintain the clearance in the table below to avoid crosstalk.

Face to face mounting

Parallel mounting

Model No.	G (mm inch)	H (mm inch)
UZQ260□	19 .748	14 .551
UZQ210□	20 .787	15 .591
UZQ220□	35 1.378	20 .787
UZQ230□	70 2.756	45 1.772
UZQ240□	115 4.528	70 2.756
UZQ211□	60 2.362	45 1.772
UZQ221□	145 5.709	95 3.740
UZQ231□	250 9.843	165 6.496
UZQ241□	350 13.780	250 9.843

PRECAUTIONS FOR PROPER USE

Sensing range

Sensing range listed in the specification is for a standard target. For non-ferrous object detection, the sensing range is obtained by multiplying the standard range by the correction coefficient as specified below.

Correction coefficient

Material Model No.	Iron steel	Stainless steel (SUS304)	Brass	Aluminum
UZQ260□	1	Approx. 0.63	Approx. 0.32	Approx. 0.30
UZQ210□	1	Approx. 0.59	Approx. 0.32	Approx. 0.29
UZQ220□	1	Approx. 0.75	Approx. 0.51	Approx. 0.49
UZQ230□	1	Approx. 0.75	Approx. 0.50	Approx. 0.48
UZQ240□	1	Approx. 0.69	Approx. 0.44	Approx. 0.42
UZQ211□	1	Approx. 0.64	Approx. 0.38	Approx. 0.38
UZQ221□	1	Approx. 0.67	Approx. 0.44	Approx. 0.43
UZQ231□	1	Approx. 0.68	Approx. 0.45	Approx. 0.43
UZQ241□	1	Approx. 0.67	Approx. 0.44	Approx. 0.43

(*1): Note that the sensing range varies if the object is plated.

Protective cover (option)

It protects the sensing surface from welding sparks (spatter), etc.

Mounting method

Protective cover Sensor

Material: Fluorine resin

Model No.	Applicable model No.
UZQ821	UZQ220□
UZQ822	UZQ230□
UZQ823	UZQ240□

(*1): To fit the protective cover correctly make sure there is no space between the protective cover and the sensing surface of the sensor.

Others

Power supply should be turned off before wiring.

Verify that voltage fluctuations do not exceed the rated value.

When using a switching regulator power supply (readily available in the market), always ground the frame ground (F.G.) terminal.

When using equipment which generates noise (switching regulator or inverter motor, etc.) near the sensor, ground the frame ground (F.G.) terminal of the equipment.

Do not use the sensor output signal for 50ms immediately after power is supplied to the sensor.

Do not run sensor cables near high-voltage lines or power lines, or put them together in the same raceway. Doing so may cause malfunctions due to inductive interference.

Avoid placement where the sensor may be exposed to chemical agents such as thinner or organic solvents.

Metal dust or spatter covering the sensing face may cause a malfunction.

Stress should not be applied to the sensor cable at the joint.

Wiring

Always connect the sensor to the power supply through a load. If the sensor is connected to the power supply directly, the short-circuit protection will operate and the sensor will not work (The output will stay in the OFF state and the indicator will not light.) In such a case, if the power supply is reconnected to the sensor with a load, the sensor will operate normally. Also, be careful not to connect the power with reverse polarity as this will damage the sensor if load is not connected.

When using series connection (AND circuit) or parallel connection (OR circuit), be aware of the followings.

Series connection (AND circuit) Parallel connection (OR circuit)

Load voltage V_{RL} when all sensors are in the ON state
 $V_{RL} = V_{CC} - n \times 3(V)$

V_{CC} : supply voltage
 (24V DC MAX.)
 n : number of sensors

Be careful of the wrong operation of the load.

(*1): Even if the indicator is dark or does not light on, the output operation is normal.

Leakage current I_{CC} flows to the load when all sensors are in the OFF state.

$I_{CC} = n \times 0.8(\text{mA})$ (n : number of sensors)

Be careful of the wrong operation of the load.

(*1): Load current in the ON state

$I_L = \frac{V_{CC} - 3V}{\text{load resistor}} (\text{mA})$

However, load current is;
 $3\text{mA} \times n \leq I_L \leq 70\text{mA}$
 (n : number of sensors in the ON state)

Residual voltage in the sensor is 3V. When connecting the relay, be aware of the actuation voltage of the relays. (12V relays may not be connected as loads.)

Two-color indicator (Only for approach ON type)

When the sensing object is in the stable sensing range, a green LED lights, and when the sensing object is in the unstable sensing range, an orange LED lights. If a green LED lights, the stable sensing will occur without being affected by temperature drift or voltage fluctuation.
