

TW-DIY-5134

The aim of this kit is to show how to use a 16x2 alphanumeric Liquid Crystal Display (LCD) with a PC. First we show how to connect it to the parallel port and echo and handle keyboard input. Then we show how to use the LCD to display temperature from a DS1620 Digital Thermometer/Thermostat chip and set the HI & LO triggerpoints in it. All C source code is provided.

Introduction to LCD's Kit - DIY

Learn how to connect a 2x16 LCD to a PC parallel port. First this kit will show you how to write keystrokes from the PC keyboard to display on the LCD. It will show you how to process this data (rotate the string left and right.) All the code is provided. Second, there is an on-board DS1620 to measure temperature. The temperature is displayed in F or C. Just press a button to display either. With the DS1620 you may set breakpoints to turn a thermostat on/off. We provide all the code to do this. Once the DS1620 is programmed it may be removed and placed in another device for temperature control. Many web references are provided.

• PARTS LIST - KIT 134

Resistors (0.25W carbon)

10K.....R1-4 4

10K trimpot.....VR1..... 1

Capacitors

100nF
monoblocC3..... 1

10uF 25V
electrolytic...C2..... 1

100uF 16V
electrolytic..C1..... 1

Semiconductors

1N4004.....D2..... 1

1N4148.....D1..... 1

78L05.....IC2 1

+5V regulator, TO-92 package

DS1620IC11

Digital Thermometer and Thermostat
Liquid Crystal Display..LCD 16 x 2, no
b/l .. 1

Miscellaneous 2.5mm DC
jackX2..... 1

PCB mounting D25
connector.....X1..... 1

PCB mounting, right-angle, male 5-
pin SIL header.....X3..... 1

8-pin IC socketfor IC1..... 1

14-pin SIL socketfor
