

Low Voltage, Low On-Resistance, Dual DPDT Analog Switch

DESCRIPTION

The DG2799 is a dual double-pole/double-throw monolithic CMOS analog switch designed for high performance switching of analog signals. Combining low power, high speed, low on-resistance and small physical size, the DG2799 is ideal for portable and battery powered applications requiring high performance and efficient use of board space.

The DG2799 is built on Vishay Siliconix's low voltage process. An epitaxial layer prevents latchup. Break-before-make is guaranteed.

The switch conducts equally well in both directions when on, and blocks up to the power supply level when off.

As a committed partner to the community and the environment, Vishay Siliconix manufactures this product with the lead (Pb)-free device terminations. For analog switching products manufactured in QFN packages, the lead (Pb)-free "-E3/E4" only suffix is being used as a designator. Lead (Pb)-free QFN products purchased at any time will have either a nickel-palladium-gold device termination or a 100 % matte tin device termination. The different lead (Pb)-free materials are interchangeable and meet all JEDEC standards for reflow and MSL rating.

FEATURES

- Low Voltage Operation (1.65 V to 4.3 V)
- Low On-Resistance - r_{ON} : 0.25 Ω @ 2.7 V
- Fast Switching: t_{ON} = 28 ns
 t_{OFF} = 17 ns
- QFN-16 (3 x 3) Package
- Latch-Up Current > 300 mA (JESD78)

BENEFITS

- Reduced Power Consumption
- High Accuracy
- Reduce Board Space
- TTL/1.8-V Logic Compatible
- High Bandwidth

APPLICATIONS

- Cellular Phones
- Speaker Headset Switching
- Audio and Video Signal Routing
- PCMCIA Cards
- Battery Operated Systems

FUNCTIONAL BLOCK DIAGRAM AND PIN CONFIGURATION

NOTE:

Underside exposed pad has no device electrical connection. It is recommended that no electrical connection is made to it.

TRUTH TABLE		
Logic	NC1, 2, 3 and 4	NO1, 2, 3 and 4
0	ON	OFF
1	OFF	ON

ORDERING INFORMATION		
Temp Range	Package	Part Number
-40 to 85°C	16-Pin QFN (3 x 3 mm) Variation 2	DG2799DN-T1—E4

ABSOLUTE MAXIMUM RATINGS $T_A = 25^\circ\text{C}$, unless otherwise noted				
Parameter		Symbol	Limit	Unit
Reference to GND	V+		-0.3 to 5.0	V
	IN, COM, NC, NO ^a		-0.3 to (V+ + 0.3)	
Current (Any terminal except NO, NC or COM)			30	mA
Continuous Current (NO, NC, or COM)			± 300	
Peak Current (Pulsed at 1 ms, 10 % duty cycle)			± 500	
Storage Temperature (D Suffix)			-65 to 150	$^\circ\text{C}$
Package Solder Reflow Conditions ^d	16-Pin QFN (3 x 3 mm)		250	
Power Dissipation (Packages) ^b	QFN-16 ^c		1385	mW

Notes

- a. Signals on NC, NO, or COM or IN exceeding V+ will be clamped by internal diodes. Limit forward diode current to maximum current ratings.
- b. All leads welded or soldered to PC Board.
- c. Derate 17.3 mW/ $^\circ\text{C}$ above 70 $^\circ\text{C}$
- d. Manual soldering with iron is not recommended for leadless components. The QFN is a leadless package. The end of the lead terminal is exposed copper (not plated) as a result of the singulation process in manufacturing. A solder fillet at the exposed copper lip cannot be guaranteed and is not required to ensure adequate bottom side solder interconnection.

Notes

- a. Room = 25°C, Full = as determined by the operating suffix.
b. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
c. Typical values are for design aid only, not guaranteed nor subject to production testing.
d. Guarantee by design, not subjected to production test.
e. V_{IN} = input voltage to perform proper function.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

TYPICAL CHARACTERISTICS $T_A = 25^\circ\text{C}$, unless otherwise noted

TYPICAL CHARACTERISTICS $T_A = 25^\circ\text{C}$, unless otherwise noted

The diagram shows a 74VHC14 inverter. The input is connected to a square wave pulse source through a 10 kΩ resistor. The output is connected to a load resistor $R_L = 50\ \Omega$ and a load capacitor $C_L = 35\text{ pF}$ in parallel. The output voltage V_{OUT} is measured across the load. The inverter is powered by a 5V supply (V_+) and ground (0V).

$$V_{OUT} = V_{COM} \left(\frac{R_L}{R_L + R_{ON}} \right)$$

Logic "1" = Switch On
Logic input waveforms inverted for switches that have the opposite logic sense.
