

Connections of the Various Units and Device Interiors

GT8 Series

— High-Pressure Connectors — <GT8, GT8A, GT8Z and GT8E>

■ Features

<GT8, GT8A, GT8Z>

Crimp Terminals

- Use of an air-tight dimple construction at the contact portion serves to prevent oxidation of the contact portion.
- F Connector Housing
- Terminal number markings appear in a large size in consideration of insertion processing.
- Form designed to prevent erroneous insertion.

M Connectors

- Designed with escape holes for washing liquid to escape so that secondary soiling may be prevented when the board has been washed.
- The surrounding wall of the terminal has been constructed higher than the terminal so as to prevent terminal bending.

The others

- The F connector housing fits entirely inside of the M connector to prevent incomplete insertion and prevents twisting and other problems. The F connector is guarded so that there is no slanting nor contact movement, and the connector is resistant to vibration.
- The color of the F connector housing and the M connector have been changed to prevent incomplete insertion.

M Connectors (SMT Product)

- Instead of using screws for board fastening, a lead reflow type of reinforced fitting is used that permits soldering at the time of reflow.

■ Applications

Internal connections of mobile units and industrial equipments.
