

Features

- Universal AC input / Full range
- 3.3"x2" compact PCB size
- Models with L-Bracket and cover available (PSC-35x-C, x=A,B)
- Protections: Short circuit / Overload / Over voltage
- Battery low protection / Battery reverse polarity protection by fuse
- · Alarm signal for AC OK and Battery low
- · Cooling by free air convection
- · 100% full load burn-in test
- · 2 years warranty

Applications

- · Security system
- · Emergency lighting system
- Alarm system
- UPS system
- · Central monitoring system
- Access systems

Description

PSC-35 series is a 35W AC/DC security power supply, allowing the universal input range between 90VAC and 264VAC and incorporating the built-in PFC function. In addition to the primary output, there is a charger output, with a smaller rated current, providing the backup application the security access systems normally need.

PSC-35 delivers an efficiency up to 86%; it can operate with air convection under -30 $^{\circ}$ C through 70 $^{\circ}$ C. This series is designed with thorough alarm features, including AC OK and battery low signaling; moreover, the relay contact is provided to facilitate users' system designs. PSC-35 is available in the PCB type (3.3" x 2") or the enclosed type with L-Bracket and cover.

35W Single Output with Battery Charger(UPS Function)

PSC-35 series

PSC-35A -C =Blank,-C; Blank=PCB only, -C=Enclosed type

■ Suggested Application

1.Backup connection for AC interruption

(1) Please refer to the Fig1.1 for suggested connection.

The power supply charges the battery and provides energy to the load at the same time when the AC main is OK. The battery starts to supply power to the load when the AC mains fails.

Fig 1.1 Suggested system connection

2. Alarm Signal for AC OK and Battery Low

- (1) Alarm Signal is sent out through " AC OK " & " Battery Low " pins.
- (2) An external voltage source is required for this function. The maximum applied voltage is 50V and the maximum sink current is 30mA.
- (3) Table 2.1 explains the alarm function built in the power supply

Function	Description	Output of alarm	
AC OK	The signal is "Low" when the power supply turns on	Low (0.3V max. at 30mA)	
ACOK	The signal turns to be "High" when the power supply turns OFF	High or open(External applied voltage 50V max.)	
Battery	The signal is "Low" when the voltage of battery is under A:11V, B:22V	Low (0.3V max. at 30mA)	
Low	The signal is "High" when the voltage of battery is above A:11V, B:22V	High or open(External applied voltage 50V max.)	

Table 2.1 Explanation of Alarm Signal

AC OK (Battery low) Pin6 DC output com External voltage and R (The max. Sink is 30mA and 50V)
