

RoHS Compliant Small Form Factor Pluggable Transceiver for Fast Ethernet, ATM, SONET OC-3/SDH STM-1

FEATURES

- Compliant with SFP Transceiver MSA specification
- LCP-155B4JSR short-haul SONET OC-3 / SDH STM-1 (S-1.1) Compliant
- Compliant with Industry Standard RFT Electrical Connector and Cage
- Single + 3.3V Power Supply and TTL Logic Interface
- EEPROM with Serial ID Functionality
- Laser Class 1 Product which comply with the requirements of IEC 60825-1 and IEC 60825-2
- Duplex LC Connector interface

Description

The LCP-155B4JSRx series are a hot pluggable 3.3V Small-Form-Factor transceiver module designed expressly for high-speed communication applications that require rates of up to 155Mbit/sec. It is compliant with the ATM, SONET OC-3/SDH STM-1 standards, as well as the SFP Multisource Agreement (MSA).

The LCP-155B4JSRx transceivers provide with the LC receptacle that is compatible with the industry standard LC connector. The transceiver is also compatible with industry standard RFT connector and cage.

The post-amplifier of the LCP-155B4JSRx also includes a LOS (Loss Of Signal) circuit that provides a TTL logic-high output when an unusable optical signal level is detected.

The LCP-155B4JSRx transceivers are a Class 1 eye safety product. The optical power levels, under normal operation, are at eye safe level.

Applications

- SONET OC-3/SDH STM-1
- ATM Network
- Fast Ethernet
- Switch to Switch interface
- Switched backplane applications
- File server interface

Performance

- LCP-155B4JSR Data Link up to 15km in 9/125um Signal Mode Fiber

Absolute Maximum Ratings

Parameter	Symbol	Min.	Typ.	Max.	Unit	Note
Storage Temperature	Ts	-40		85	°C	
Supply Voltage	VCC	0		5	V	

Recommended Operating Conditions

Parameter	Symbol	Min.	Typ.	Max.	Unit	Note
Case Operating Temperature	Tc	-5		+70	°C	See order information for detail
Supply Voltage	VCC	3.135		3.465	V	

Electrical Characteristics

(V_{CC}=3.135V to 3.465V)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Note
Total Supply Current	ICCT			250	mA	
Transmitter						
Transmitter Differential Input Voltage	VDT	0.5		2.4	V	1
Transmitter Disable Input-High	V _{DISH}	2		V _{CC} +0.3	V	
Transmitter Disable Input-Low	V _{DISL}	0		0.8	V	
Transmitter Fault Pull up Resistor	R _{TX_FAULT}	4.7		10	kΩ	2
Transmitter Fault Output-High	V _{TXFH}	2		V _{CC} +0.3	V	
Transmitter Fault Output-Low	V _{TXFL}	0		0.8	V	
Receiver						
Receiver Differential Output Voltage	VDR	0.35	1	2	V	3
Receiver LOS Load	R _{RXLOS}	4.7		10	kΩ	2
LOS Output Voltage-High	V _{LOSH}	2		V _{CC} +0.3	V	
LOS Output Voltage-Low	V _{LOSL}	0		0.8	V	
Output Data Rise/Fall Time	t _r / t _f			2.5	nsec	4

Notes:

1. Internally AC coupled and terminated to 100 Ohm differential load.
2. Pull up to V_{CC} on host Board
3. Internally AC coupled, but requires a 100 Ohm differential termination at or internal to Serializer/Deserializer.
4. These are 20%~80% values

Optical Characteristics

(V_{CC} =3.135V to 3.465V, Data Rate=155Mb/sec, PRBS= 2^{23} -1 NRZ, 9/125 μ m SMF)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Note
Transmitter						
Output Optical Power (Avg.)	P _O	-15		-8	dBm	
Optical Extinction Ratio	E.R.	10			dB	
Center Wavelength	λ _C	1263	1310	1360	nm	
Spectral Width (RMS)	σ			7.7	nm	
Optical Rise/Fall Time	t _r /t _f			2	ns	1
Output Eye	Compliant with Bellcore TR-NWT-000253 and ITU recommendation G.957					
Receiver						
Sensitivity (Avg.)	P _{IN}			-31	dBm	2
Input Optical Wavelength	λ		1310		nm	
LOS-Deasserted (Avg.)	P _A			-31	dBm	
LOS-Asserted (Avg.)	P _D	-48			dBm	
LOS-Hysteresis	P _A -P _D	0.5			dB	
Overload	P _O	-3			dBm	

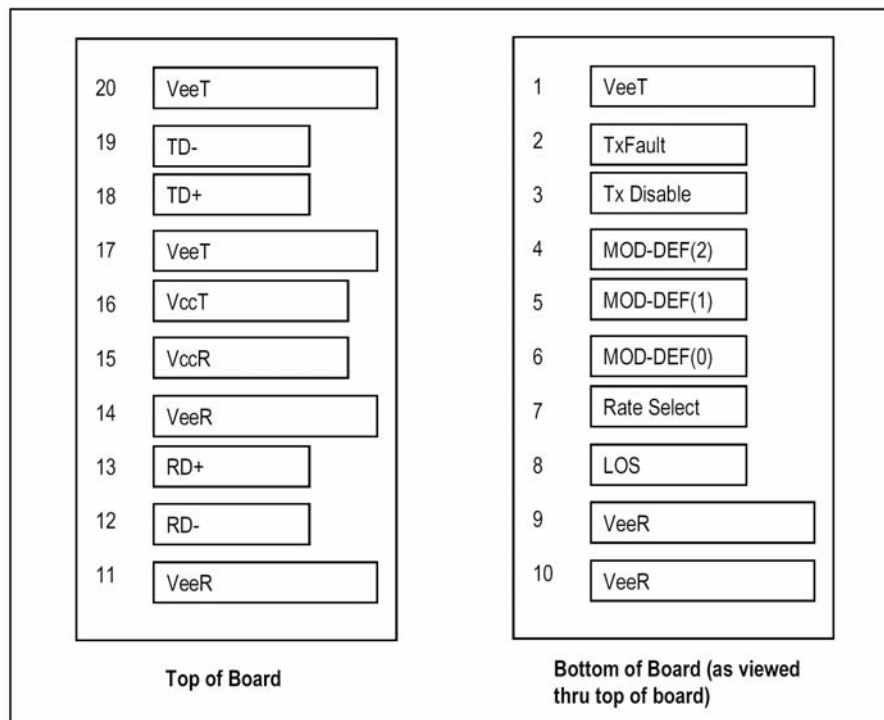

Notes:

- These are unfiltered 10%~90% values
- The sensitivity is provided at a BER of 1×10^{-10} or better with an input signal consisting of 155Mb/s, 2^{23} -1 PRBS and ER=9dB.

19	TD-	Inv. Transmit Data In	3	Note 8
20	VeeT	Transmitter Ground	1	Note 5

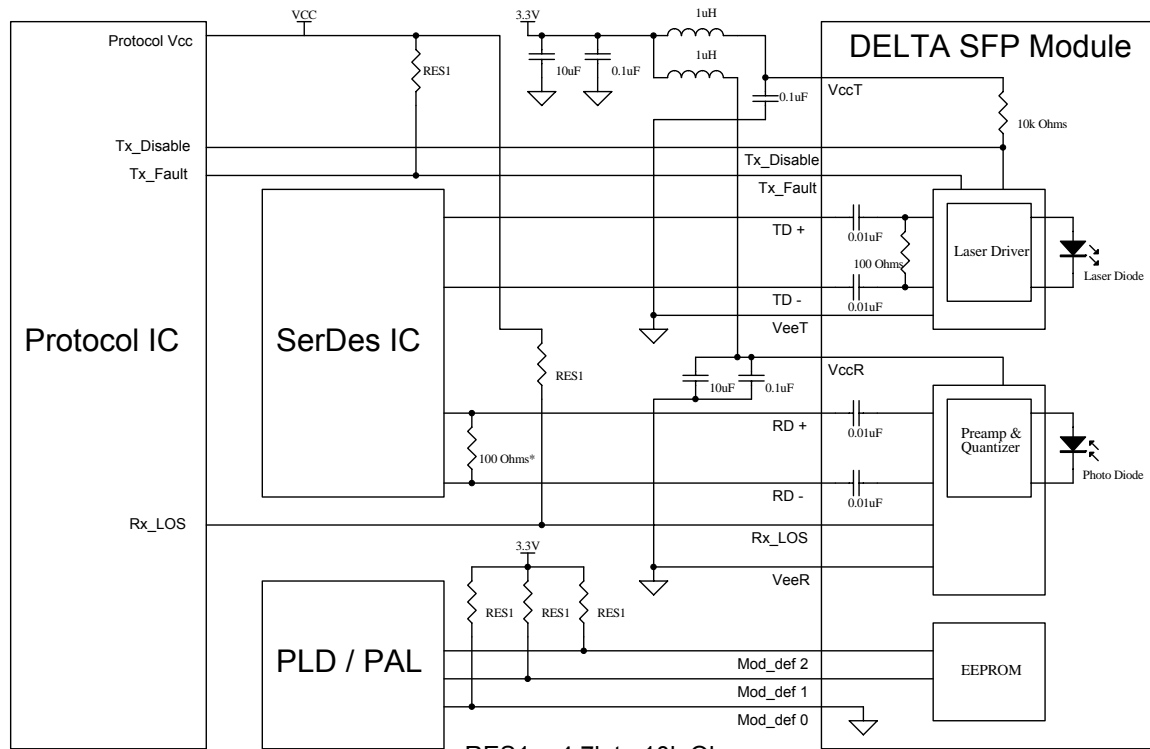

Plug Seq.: Pin engagement sequence during hot plugging.

Notes:

- 1) TX Fault is an open collector/drain output, which should be pulled up with a 4.7K – 10K Ω resistor on the host board. Pull up voltage between 2.0V and VccT, R+0.3V. When high, output indicates a laser fault of some kind. Low indicates normal operation. In the low state, the output will be pulled to < 0.8V.
- 2) TX disable is an input that is used to shut down the transmitter optical output. It is pulled up within the module with a 4.7 – 10 K Ω resistor. Its states are:

Low (0 – 0.8V):	Transmitter on
(>0.8, < 2.0V):	Undefined
High (2.0 – 3.465V):	Transmitter Disabled
Open:	Transmitter Disabled
- 3) Mod-Def 0,1,2. These are the module definition pins. They should be pulled up with a 4.7K – 10K Ω resistor on the host board. The pull-up voltage shall be VccT or VccR (see Section IV for further details). Mod-Def 0 is grounded by the module to indicate that the module is present Mod-Def 1 is the clock line of two wire serial interface for serial ID Mod-Def 2 is the data line of two wire serial interface for serial ID
- 4) LOS (Loss of Signal) is an open collector/drain output, which should be pulled up with a 4.7K – 10K Ω resistor. Pull up voltage between 2.0V and VccT, R+0.3V. When high, this output indicates the received optical power is below the worst-case receiver sensitivity (as defined by the standard in use). Low indicates normal operation. In the low state, the output will be pulled to < 0.8V.
- 5) VeeR and VeeT may be internally connected within the SFP module.
- 6) RD-/+: These are the differential receiver outputs. They are AC coupled 100 Ω differential lines which should be terminated with 100 Ω (differential) at the user SERDES. The AC coupling is done inside the module and is thus not required on the host board. The voltage swing on these lines will be between 370 and 2000 mV differential (185 – 1000 mV single ended) when properly terminated.
- 7) VccR and VccT are the receiver and transmitter power supplies. They are defined as 3.3V \pm 5% at the SFP connector pin. Maximum supply current is 300 mA. Recommended host board power supply filtering is shown below. Inductors with DC resistance of less than 1 Ω should be used in order to maintain the required voltage at the SFP input pin with 3.3V supply voltage. When the recommended supply-filtering network is used, hot plugging of the SFP transceiver module will result in an inrush current of no more than 30 mA greater than the steady state value. VccR and VccT may be internally connected within the SFP transceiver module.
- 8) TD-/+: These are the differential transmitter inputs. They are AC-coupled, differential lines with 100 Ω differential termination inside the module. The AC coupling is done inside the module and is thus not required on the host board. The inputs will accept differential swings of 500 – 2400 mV (250 – 1200 mV single-ended), though it is recommended that values between 500 and 1200 mV differential (250 – 600 mV single-ended) be used for best EMI performance.

SFP timing parameters for SFP management

Parameter	Symbol	Min.	Max.	Unit	Unit Conditions
TX_DISABLE Assert time	t_off		10	μsec	Time from rising edge of TX_DISABLE to when the optical output falls below 10% of nominal
TX_DISABLE Negate time	t_on		1	msec	Time from falling edge of TX_DISABLE to when the modulated optical output rises above 90% of nominal
Time to initialize, including reset of TX_FAULT	t_init		300	msec	From power on or negation of TX_Fault using TX Disable.
TX Fault Assert Time	t_fault		100	μsec	Time from fault to TX fault on.
TX_DISABLE to reset	t_rest	10		μsec	Time TX Disable must be held high to reset TX_Fault
LOS Assert Time	t_loss_on		100	μsec	Time from LOS state to Rx LOS assert
LOS Deassert Time	t_loss_off		100	μsec	Time from non-LOS state to Rx LOS deassert
Serial ID Clock Rate	f_serial_clock		100	kHz
