

FEATURES

1. Compact and lightweight

Charged with hydrogen gas for high arc cooling capacity, short gap cutoff has been achieved at high DC voltages.

2. Safety

High safety achieved with construction that prevents explosions by keeping the arc from leaking.

3. High contact reliability

Since the contact portion is sealed in hydrogen gas, there is no contact oxidation. It is also dustproof and waterproof.

TYPICAL APPLICATIONS

High DC voltage applications such as

- Electric vehicle
- Hybrid vehicle
- Fuel-cell vehicle
- Battery charge and discharge systems
- Construction equipment

Compliance with RoHS Directive

ORDERING INFORMATION

(Not freezing and condensing at low temperature)	
Unit weight (Approx.)			90 g 3.17 oz		180 g 6.35 oz		400 g 14.11 oz		400 g 14.11 oz		750 g 26.46 oz		

Notes: *1. This value can change due to the switching frequency, environmental conditions, and desired reliability level, therefore it is recommended to check this with the actual load.

*2. The electrical load performance value for the 10A, 20A, 80A and 120 A types applies when a varistor is connected in parallel to the coil. Please be warned that working life will be reduced when a diode is used.

*3. Condition: Nominal switching 10 cycles, each cut-off 2,500 A

*4. The coil voltage 12 V DC type and 24 V DC type have the same specifications.

*5. at L/R ≤ 1ms

more than 50 1.969: ±1.0 ±.039

5. 300 A type

CAD Data

Schematic (TOP VIEW)

Load side has polarities (+) and (-)

Mounting dimensions

General tolerance:

less than 10 .394: ±0.3 ±.012
10 to 50 .394 to 1.969: ±0.6 ±.024
more than 50 1.969: ±1.0 ±.039

*Note: Separate connection of the terminal and lead wire is required.

NOTES

1. For general cautions for use, please refer to the “General Application Guidelines”.

2. When installing the relay, always use washers to prevent the screws from loosening.

Tighten each screw within the rated range given below. Exceeding the maximum torque may result in breakage. Mounting is possible in either direction.

<Relay installing section>

- M4 screw (for 10A type): 1.8 to 2.7 N·m
- M5 screw (for 20A, 80A, 120A and 300A types): 3 to 4 N·m

<Main terminal installing section>

- M5 nut (for 80A type): 3 to 4 N·m
- M6 nut (for 120A type): 6 to 8 N·m
- M8 nut (for 300A type): 10 to 12 N·m

3. The coils (300 A type) and contacts (all type) of the relay are polarized, so follow the connection schematic when connecting the coils and contacts.

Type 300 A contains a reverse surge voltage absorption circuit; therefore a surge protector is not needed. We recommend installing a surge protector varistor (ZNR) for the 10A, 20A, 80A and 120A types.

<Recommend varistor>

Amount of proof energy: Min. 1 J

Varistor voltage: 1.5 to 2.0 times of nominal voltage

Avoid using a diode as this may result in decreased cut-off capability.

4. As a general rule, do not use a relay if it has been dropped.

5. Avoid mounting the relay in strong magnetic fields (near a transformer or magnet) or close to an object that radiates heat.

6. Electrical life

This relay is a high-voltage direct-current switch. In its final breakdown mode, it may lose the ability to provide the proper cut-off. Therefore, do not exceed the indicated switching capacity and life.

(Please treat the relay as a product with limited life and replace it when necessary.)

In the event that the relay loses cut-off ability, there is a possibility that burning may spread to surrounding parts, so configure the layout so that the power is turned off within one second.

7. Permeation life of internal gas

This relay uses a hermetically encased contact (capsule contact) with gas inside. The gas has a permeation life that is affected by the temperature inside the capsule contact (ambient temperature + temperature rise due to flow of electrical current). For this reason, make sure the ambient operating temperature is between -40 and 80°C -40 and $+176^{\circ}\text{F}$ (300A type is Max. 85°C 185°F), and the ambient storage temperature is between -40 and 85°C -40 and $+185^{\circ}\text{F}$.

8. If the power is turned off and then immediately on after applying the rated voltage (current) continuously to the relay's coil and contact, the resistance of the coil will increase due to a rise in the coil temperature.

This causes the pick-up voltage to rise, and possibly exceed the rated pick-up voltage. In these circumstances, take measures such as reducing the load current, limiting the duration of current flow, and applying a coil voltage higher than the rated operating voltage.

9. Main contact ratings in the ratings apply to when there is a resistive load.

If you are using an inductive load (L load) such that $L/R > 1$ ms, add surge protection in parallel with the inductive load.

If this is not done, the electrical life will decrease and cut-off failure may occur.

10. For the 300 A type, drive the coil with a quick startup.

(Built-in one-shot pulse generator circuit)

11. Be careful that foreign matter and oils and fats kind don't stick to the main terminal parts because it is likely to cause terminal parts to give off unusual heat.

Also, please use the following materials for connected harnesses and bus bars.

10A type: Min. 2 mm² nominal cross-sectional area

20A type: Min. 3 mm² nominal cross-sectional area

80A type: Min. 15 mm² nominal cross-sectional area

120A type: Min. 38 mm² nominal cross-sectional area

300A type: Min. 100 mm² nominal cross-sectional area

12. As a guide, the insertion strength of the plug-in terminal into the relay tab terminal should be 40 to 70N (10A type), 40 to 80N (20A type). Please select a plug-in terminal (flat connection terminal) which comply with JIS C2809-1992.

10A type: for plate thickness 0.5mm and #187 tab terminal

20A type: for plate thickness 0.8mm and #250 tab terminal

13. Avoid excessive load applied to the terminal in case of installing such as a bus bar etc., Because it might adversely affect the opening and closing performance.

14. Use the specified connector for the connector terminal connection (80A, 120A and 300A)

Yazaki Corporation 7283 – 1020 or equivalent

15. After the ON signal enters the 300A type, automatic coil current switching occurs after approximately 0.1 seconds. Do not repeatedly turn it OFF within that 0.1 seconds interval, as doing so may damage the relay.
