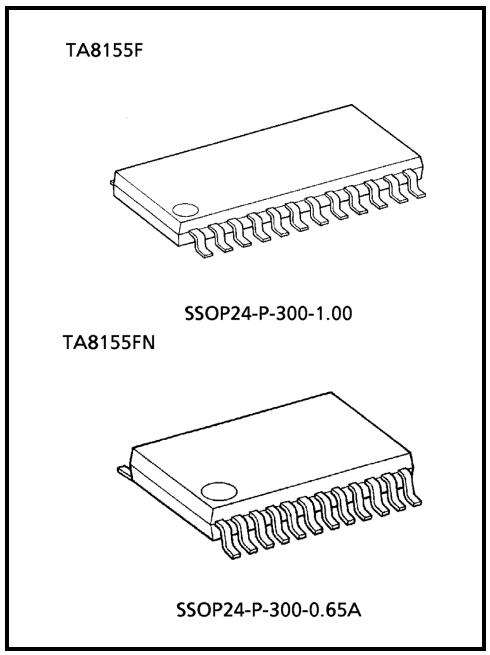
TOSHIBA Bipolar Linear Integrated Circuit Silicon Monolithic

TA8155F,TA8155FN

REC / PB System Dual Pre−amplifier (1.5 / 3V USE)

The TA8155F and TA8155FN are REC / PB system dual pre amplifier ICs, which are developed for low voltage operation (1.5 / 3V use). These are especially suitable for a stereo headphone cassette player.

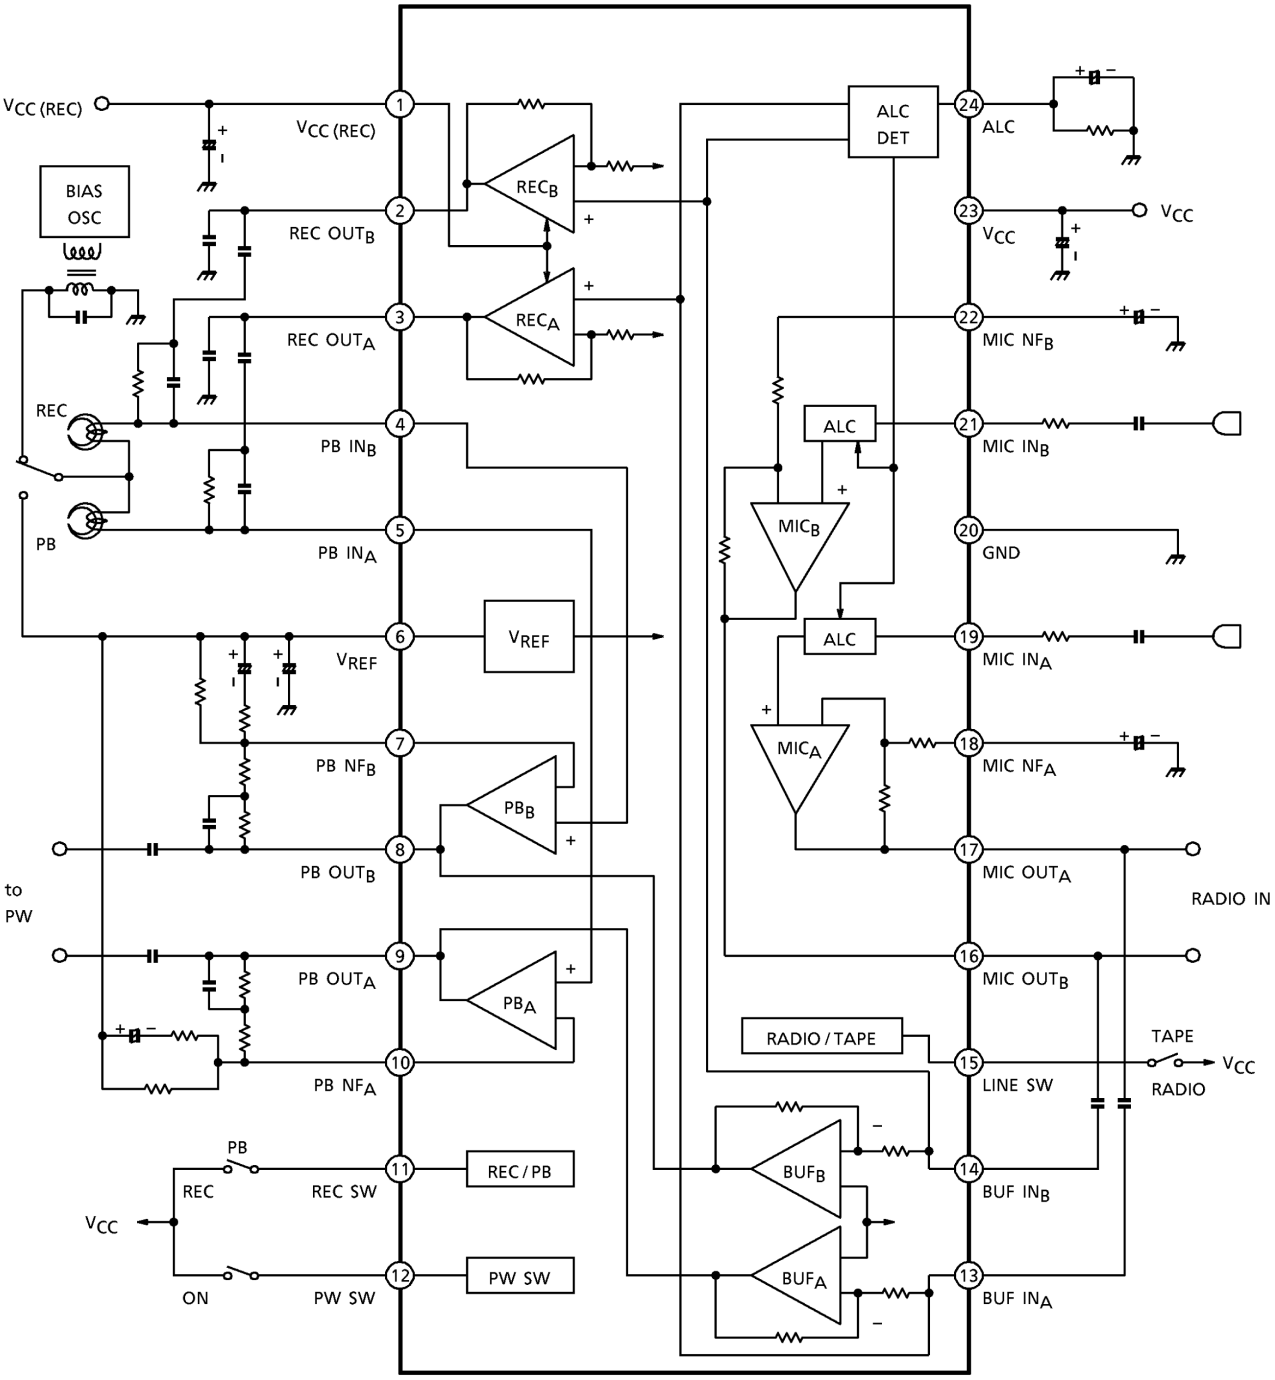


Weigh
SSOP24-P-300-1.00: 0.32g (typ.)
SSOP24-P-300-0.65A: 0.14g (typ.)

Features

- Built−in dual playback amplifiers.
  Input coupling condenser−less.
  Built−in capacitor for buzz noise.
- Built−in dual buffer amplifiers.
  For radio signal inut.
  Monitor for REC mode.
- Built−in dual microphone amplifiers.
  Built−in an ALC circuit for MIC−REC mode.
  Attack time. : 0.1s (typ.)
  Recovery time. : 3.5s (typ.)
- Built−in dual recording amplifiers.
  Single−end output type.
- Built−in a power switch.
- Low quiescent current. (V_{CC} = 1.2V, Ta = 25°C)
  PB mode ..... I_{CCQ2} = 2.6mA (typ.)
  Radio mode ..... I_{CCQ3} = 2.4mA (typ.)
  Radio−REC mode ... I_{CCQ4} = 3.0mA (typ.)
  MIC−REC mode ..... I_{CCQ5} = 4.5mA (typ.)
- Low power dissipation.
  PB mode : 2.9mW (typ.)
  MIC−REC mode : 8.9mW (typ.)
- Operating supply voltage range. (Ta = 25°C)
  $V_{CC\ (opr)}$ = 0.9~4V
  $V_{CC\ (opr)\ (REC)}$ = 1.8~4V

Block Diagram



Terminal Explanation

Terminal Voltage : Typical Terminal Voltage at no Signal with Test Circuit.
(V_{CC} = 1.2V, $V_{CC\ (REC)}$ = 2.4V, Ta = 25°C)

Terminal No.	Terminal Name	Function	Internal Circuit	Terminal Voltage (V)
1	$V_{CC(REC)}$	This terminal voltage supplies output stage of recording amplifier with power source.		2.4
2	REC OUT_B	Output of recording amplifier.		1.15
3	REC OUT_A			
4	PB IN_B	Input of playback amplifier.		0.85
5	PB IN_A			
7	PB NF_B	NF of playback amplifier.		0.85
10	PB NF_A			
6	V_{REF}	Reference voltage. All amplifier operate on this voltage.		0.85
8	PB OUT_B	Output of playback amplifier and buffer amplifier.		0.55
9	PB OUT_A			
11	REC SW	REC / PB switch. V_{CC}: REC mode. GND / OPEN: PB mode.		—
12	PW SW	Power switch. V_{CC}: Power on. GND / OPEN: Power off.		—
15	Line SW	Line switch. VCC: BUF (radio) mode. GND / OPEN: Tape mode.		—

Terminal No.	Terminal Name	Function	Internal Circuit	Terminal Voltage (V)
13	BUF IN_A	Input of buffer amplifier and recording amplifier. (Buffer amplifier is inverter type.) ALC level of microphone amplifier is determined by signal level of this terminal		0.85
14	BUF IN_B			
16	MIC OUT_B	Output of microphone amplifier.		0.55
17	MIC OUT_A			
18	MIC NF_A	NF of microphone amplifier.		0.05
22	MIC NF_B			
19	MIC IN_A	Input of microphone amplifier. Built−in capacitor for buzz noise.		0.01
21	MIC IN_B			
20	GND	—	—	0
23	V_{CC}	—	—	1.2
24	ALC	ALC terminal. ALC function is operated in only MIC−REC mode.		0.11

Application Note

(1) PW SW

It is necessary to connect an external pull–down resistor with the terminal PW SW (pin(12)), in case that this IC is turned on due to external noise etc.

(2) Mode SW

IC mode is determined by switch condition of RED SW (pin(11)) and LINE SW (pin(15))

(Table.1)
H level: Bias current should be applied to switch terminal more than 5μA.
L level: Bias voltage should be applied to switch terminal from 0V to 0.3V.

Table.1 IC mode

LINE SW \ REC SW	L	H
L	PB mode (PB)	MIC–REC (BUF,MIC,REC)
H	Radio mode (BUF)	Radio–REC mode (BUF,REC)

( ) : Operating amplifier.

The leak current flows through the terminal of REC SW (pin(11)) or LINE SW (pin(15)), in case that the terminals connected with V_{CC} line independently, even though this IC is off–mode (the terminal of PW SW (pin(12)) is off–mode).
And it is necessary to connect an external pull–down resistor with the terminal REC SW (pin(11)) and LINE SW (pin(15)), in case that this IC is turned on due to external noise etc.

(3) Playback amplifier
Output voltage of playback amplifier is determined by an external resistor R_1 and R_f.

$$V_{O\ (PRE)} = V_{REF} - \Delta V - R_f\left(\frac{\Delta V}{R_1} - I_{B(NF)}\right)$$

ΔV is an off–set voltage which is designed to 18mV.
In case that ß of transistor is assumed 100, $I_{B(NF)}$ is flowed 0.2μA in Fig.1. And output voltage of playback amplifier (pin (8),(9)) in Fig.1 is

$$V_{O\ (PRE)} = 0.85V - 0.018V - (330k\Omega + 13k\Omega) \times \left(\frac{0.018V}{18k\Omega} - 0.2\mu A\right) = 0.56(V)$$

Output voltage of playback amplifier should be fixed V_{CC} / 2, because playback amplifier get a enough dynamic range.
And current source of 20μA is operated except playback mode, in order to reduce a pop sound in swichover between playback on / off mode (Fig.2).

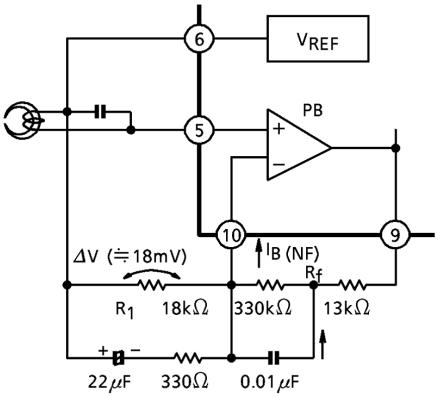


Fig.1 DC output voltage of playback amplifier.

(4) Microphone amplifier

Current source of 5.5μA is operated except MIC–REC mode, because bias is applied to the same output voltage as output voltage of microphone amplifier in operation (Fig.3).

(5) $V_{CC\ (REC)}$

The $V_{CC\ (REC)}$ terminal (pin(1)) is applied bias to $V_{CC\ (REC)} = V_{CC}–0.7V$, because the $V_{CC\ (REC)}$ terminal (pin(1)) is connected with the V_{CC} terminal (pin(23)) by diode, as internal circuit of termial explanation.
And supply current doesn't flow through $V_{CC\ (REC)}$ terminal (pin(1)), in case that the terminal is connectd with V_{CC} line, even though this IC is on–mode and except REC mode.

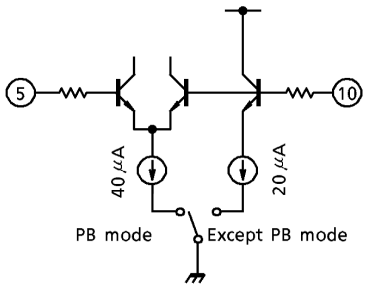

Fig.2 Reducing a pop sound of mode switchover (1).

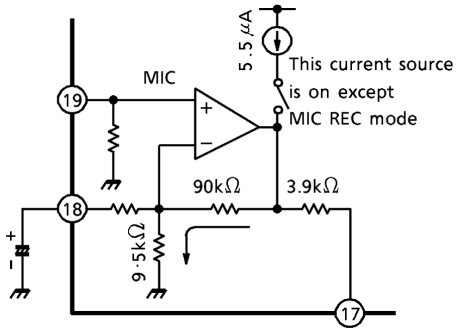

Fig.3 Reducing a pop sound of mode switchover (2).

Maximum Ratings (Ta = 25°C)

Characteristic		Symbol	Rating	Unit
Supply voltage		V_{CC}	4.5	V
		$V_{CC\ (REC)}$	4.5	
Power dissipation	TA8155F	P_D (Note)	400	mW
	TA8155FN		500	
Operating Temperature		T_{opr}	−25~75	°C
Storage temperature		T_{stg}	−55~150	°C

(Note) Derated above Ta = 25°C in the proportion of 3.2mW / °C for TA8155F, and of 4mW / °C for TA8155FN.

RESTRICTIONS ON PRODUCT USE

000707EBA

- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.
  In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the “Handling Guide for Semiconductor Devices,” or “TOSHIBA Semiconductor Reliability Handbook” etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury (“Unintended Usage”). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer’s own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.
