CARD EDGE CONNECTORS

The most common application for card edge connectors involves the use of printed circuit daughter boards. The connectors are frequently mounted within an enclosure and interconnected using either a printed circuit mother board (backplane), wire wrap technology or hand wiring.

Edac supplies connectors in a variety of row spacings and contact pitches suitable for motherboard and wire wrap applications. The backplane connectors are available in either solder dip or compliant (non-solder press fit) configurations.

Edac connectors can be designed into many of the industry standard bus systems. For your convenience, the following chart may be used as a guide.

CONNECTOR APPLICATIONS

METAL TO METAL AND RACK & PANEL CONNECTORS

When ultra reliable interconnections are required, use of our metal to metal contact system is suggested. Either standard sized connectors can be specified, or a customer's own contact pattern can be accommodated using individual components mounted directly to the printed circuit board. The principle of the Edacon metal to metal contact is shown below.

SPECIAL APPLICATIONS

Edac specializes in providing many customized connectors for both small and large orders. If you need a special card slot, body width, card guide, contact tail, mounting option, etc. then call the factory for a quotation. Our tooling system allows us to manufacture many non-standard options at a low cost.

ENGINEERING NOTES

Plastic Moulding Materials

Edac offers a wide range of insulator materials including polyester, diallyl phthalate, polyphenylene sulphide, polycarbonate and nylon. Card guides are moulded in polyester or polycarbonate and polarizing keys are moulded in nylon. If a specific material is required to suit your application, please consult with Edac.

All of the moulding materials used by Edac have excellent mechanical, electrical and thermal properties. Some of the notable differences between the material characteristics are as follows:

- 1) Diallyl phthalate is a thermoset material. All other materials used are thermoplastics.
- 2) Polyphenylene sulphide and diallyl phthalate are capable of being used in vapour phase or infra-red soldering applications up to 260 degc. Frequently these materials are also used in burn-in applications up to 150 degrees Celsius.
- 3) In general, chemical resistance is excellent for all of the materials, except polycarbonate. With polycarbonate, chemicals such as amines, aromatic or halogenated hydrocarbons, esters and ketones should be avoided.
- 4) The flammability rating is UL 94V-0 for all materials, except for polycarbonate which is rated at UL 94V-2 and nylon which is rated at UL 94HB.

Contact Materials

Contact base materials are either phosphor bronze alloy CA-510 or copper, nickel, tin alloy CA-725. These materials have been widely used and accepted in the electronics industry for many years. They offer an excellent blend of electrical, mechanical and corrosion resistance characteristics at a reasonable cost.

Phosphor bronze alloy CA-510, (Federal Specification QQ-B-750, Grade A) consists of 94.8% copper, 5% tin and 0.2% phosphorus.

Copper, nickel, tin alloy CA-725, (ASTM B-122, Copper Alloy UNS No. C72500) consists of 88.2% copper, 9.5% nickel and 2.3% tin. This material has the added benefit of remaining solderable in the unplated condition for an extended period of time.

Contact Finish (Plating & Gold Inlay)

The standard contact finishes offered include:

- 1) Selective plating - nickel overall followed by gold on the contact mating area and tin alloy on the contact tails
- 2) Overall plating - gold over nickel or tin alloy
- 3) Gold alloy inlay - Western Electric alloy #1 (69% gold, 25% silver and 6% palladium) over nickel on the mating area and unplated CA-725 tails

With this manufacturing flexibility, Edac can also provide contact finishes to meet specific requirements. Examples of special platings regularly performed include various plating thicknesses and selectively plated gold on both the mating area and the contact tail.

Metal Hardware Materials

The majority of metal hardware such as threaded inserts, bushings and actuating screws are nickel plated brass or steel. Consult with Edac if specific details are required.

Underwriters Laboratories (UL) and Canadian Standards Association (CSA)

Connectors recognized by UL and certified by CSA (as indicated on the individual series pages) are listed under UL File No. E62838 & E215269 and CSA File No. LR 39927. Consult with Edac if additional product listings are required.

Wire Data

Diameters of wire sizes commonly used with Edac connectors are summarized below. The actual stranded wire diameter is dependant upon the number of strands and individual strand gauge.

Gauge AWG	Diameter of Solid Wire Conductor	Diameter of Stranded Wire Conductor
18	.0403 (1.024)	.047 to .049 (1.19 to 1.24)
20	.0320 (0.813)	.035 to .038 (0.89 to 0.97)
22	.0253 (0.643)	.030 to .031 (0.76 to 0.79)
24	.0201 (0.511)	.023 to .024 (0.58 to 0.61)
26	.0159 (0.404)	.019 to .021 (0.48 to 0.53)
28	.0126 (0.320)	.015 to .016 (0.38 to 0.41)
30	.0100 (0.254)	.012 (0.30)

The insulation diameter will vary depending upon the application, rating and material.

CONNECTOR INSTALLATION

Connectors received by the customer are ready for installation into the circuit board. The flat rock insertion technique requires a press and adequate support for the circuit board. Once the number of contacts to be pressed into the board together has been determined, the press tonnage should be calculated at approximately 30 pounds (134 N) per contact. The support plate should be designed with clearance where the contact tails protrude through the underside of the board.

INSULATOR REMOVAL TOOL

- Part Number 745-280-200 for Use with 737 and 745 Series Connectors
- Part Number 746-280-200 for Use with 746 Series Connectors
- Tool Latches under Side Steps of Insulator and Lifts Insulator while Leaving Contacts Firmly Positioned in the Circuit Board

CONTACT REMOVAL TOOL

- Part Number 745-280-300 for Contact Codes 520 and 525
- Part Number 345-280-200 for All Other Contact Codes
- Used for 737, 745 and 746 Series
- Removes a Contact from the Circuit Board after the Insulator has been Removed

CONTACT REMOVAL OR REPLACEMENT PROCEDURE

Using the insulator removal tool, lift the insulator up to remove it from the contacts. The contacts will be left standing firmly on the circuit board. Remove any contacts necessary. If replacement contacts are needed, assemble contacts into the appropriate positions in the insulator and push them in lightly so that they will stay in position during re-assembly. Align the insulator with the contacts in the board and push it down until the new contacts are positioned over their holes. Using the flat rock installation technique, push the insulator and new contacts down into their final position.
