

Quad 2-channel analog multiplexer / demultiplexer

BU4551B / BU4551BF / BU4551BFV

The BU4551B, BU4551BF, and BU4551BFV are multiplexers / demultiplexers capable of selecting and combining analog signals and digital signals with a configuration of 2 ch $\times$ 4.

Control signals are used to turn on the switch of the corresponding channel. In addition, even if the logical amplitude (V_{DD} - V_{SS}) of the control signal is low, signals with a large amplitude (V_{DD} - V_{EE}) can be switched.

In addition, as each switch has a low ON resistance, it can be connected to a low impedance circuit.
