

TOSHIBA Bipolar Linear Integrated Circuit Silicon Monolithic

TA8132ANG,TA8132AFG,TA2012NG,TA2012FG

3V AM / FM IF + MPX
(For Digital Tuning System)

TA8132ANG, TA8132AFG and TA2012NG, TA2012FG are the AM / FM IF+ST DET system ICs, which are designed for DTS radios.

These are included many functions and these can be used for digital tuning system with IF counter.

Features

- Built-in AM / FM IF and FM stereo PLL multiplex decoder.
- Suitable for combination with digital tuning system which is included IF counter.
 - One terminal type AM / FM IF count output (auto stop signal) for IF counter of digital tuning system.
 - FM: 10.7MHz or 1.3375MHz (1 / 8 dividing)
changeable by external switch
 - AM: 450kHz
 - Built-in mute circuit for IF count output.
It is controlled by the IF request signal from digital tuning system,
Pin(8) level: High → come out
Low → non output
 - Adjustable for IF count output sensitivity by external resistance of pin(2).
- For adopting ceramic discriminator and ceramic resonator, it is not necessary to adjust the FM quad detector circuit and FM ST DET VCO circuit.
- S curve characteristics of FM detection output in TA8132ANG, TA8132AFG and TA2012NG, TA2012FG are reverse to each other.
 - TA8132ANG, TA8132AFG: Reverse characteristic.
 - TA2012NG, TA2012FG: Normal characteristic.
- Built-in one terminal type AM low cut circuit.
- TA2053F is reverse pin type of TA2012FG.
- Operating supply voltage range (Ta = 25°C)
VCC (opr.) = 1.8~8.0V

Weight

SDIP24-P-300-1.78: 1.2g (typ.)

SSOP24-P-300-1.00 : 0.31g (typ.)

Block Diagram

(Note)

We recommend

Ceramic resonator: CSB456F18

Ceramic discriminator: CDA10.7MG18 (MURATA MFG CO., LTD)

Explanation Of Terminals

Pin No.	Item	Internal Circuit	DC Voltage (V) (at no Signal)	
			AM	FM
1	AM RF IN		3.0	3.0
2	• IF count output sensitivity adjust terminal • FM IF divider control terminal		—	—
3	AM OSC		3.0	3.0
4	AM OSC OUT		2.7	3.0
5	V _{CC}	—	3.0	3.0
6	AM LOW CUT		2.3	2.3

Pin No.	Item	Internal Circuit	DC Voltage (V) (at no Signal)	
			AM	FM
7	AGC	 SEARCH MODE : HIGH	0.25	0.35
8	IF OUT SW		—	—
9	IF OUT		3.0	3.0
10	TUN LED (tuning LED)		—	—
11	ST LED (stereo LED)		—	—
12	GND	—	0	0
13 14	R-OUT L-OUT		1.0	1.0

Pin No.	Item	Internal Circuit	DC Voltage (V) (at no Signal)	
			AM	FM
15	VCO		2.5	2.5 (VCO stop mode)
16	LPF2 • LPF terminal for synchronous detector • Bias terminal for AM / FM switch circuit $V_{16} = V_{CC} \rightarrow \text{AM}$ $V_{16} = \text{open} \rightarrow \text{FM}$		3.0	2.2
17	LPF1 • LPF Terminal for phase detector • VCO stop terminal $V_{17} = V_{CC} \rightarrow \text{VCO stop}$		2.7	2.2
18	FM ST DET IN		0.7	0.7
19	DET OUT		1.1	1.1

Pin No.	Item	Internal Circuit	DC Voltage (V) (at no Signal)	
			AM	FM
20	QUAD (FM QUAD. Detector)		2.4	2.1
21	AM IF IN		3.0	3.0
22	BY-PASS By-pass for AM/FM IF AMP		2.3	2.8
23	AM MIX OUT		3.0	3.0
24	FM IF IN		3.0	3.0

Application Note

1. How to control the IF count output signal (pin(9) output)

		TUN LED	
		ON	OFF
V ₈	H	Come out	Non output
	L	Non output	Non output

- Whether or not there is the IF count output signal (pin(9) output) is determined by the and of the pin(8) control voltage: V₈ and tuning LED on / off switching.
In the condition of
V₈: High (active high, V_{TH} = 0.8V (typ.))
TUN LED: ON (V_{in} ≥ V_L+2dB_μV EMF (typ.))
the IF count output signal comes out from the pin(9).
In the case of the tuning LED function is not needed, it doesn't matter the pin(10) is opened.
- The output impedance of pin(9) is 1.5kΩ (typ.) (cf.P.4)
It is possible to reduce the IF count output signal level to add the resistance between the pin(9) and the VCC line.
- The signal waveform is the rectangular wave, and the level is 500mV_{p-p} (typ.)

2. How to control the divider of FM IF

Switch

VCC: 10.7MHz output

GND or OPEN: 1.3375MHz output (1 / 8 dividing)

3. How to adjust the IF count output sensitivity

- The IF count output sensitivity (search sensitivity)
Can be adjusted by varying the IF AMP gain for FM and varying the MIXER gain for AM.
This setting is made by changing the value of external resistance R₂ which is connected to pin(2).
- However, this is only possible at the auto-tuning mode. (external voltage supplied to pin(8) is at high level.)
The original again returns while receiving a broadcast station (supplied voltage to pin(8) is at low level.)

- The gain loss of FM IF AMP

		R ₂	
		0Ω	10KΩ (Note)
Mode	IF (10.7MHz)	-20dB	-1dB
	1 / 8 IF (1.3375MHz)	-20dB	-1dB

(Note)

- In the condition of the 1 / 8 IF mode, it is possible to set up R₂ = ∞ (OPEN).
- In the condition of IF mode, it is necessary to set up the value of R₂ under 10kΩ. When the R₂ is over 10kΩ it is feared that the mode is change to the 1 / 8 IF mode.

- The gain loss of AM MIXER

R ₂	
0Ω	10KΩ
-16dB	-1dB

4. AM low-cut circuit

- The AM low-cut action is carried out by the bypass of the high frequency component of the positive-feedback signal at the AF AMP stage. The external capacitor: C₆ by-passes this component.
- The cut-off frequency f_L is determine by the internal resistance 22kΩ (typ.) and the external capacitor C₆ as following;

$$f_L = \frac{1}{2 \times \pi \times 22 \times 10^3 \times C_6} \text{ (Hz)}$$

- In the case of the AM low-cut function is not needed, set up the value of C₆ over 0.47μF. In the condition of C₆ ≥ 0.47μF, the frequency characteristic has flat response at the low frequency.

5. AM local oscillator buffer output

- The output impedance of AM local oscillator buffer output pin (pin(4)) is 750Ω (typ.) (cf.P.3)
- It is possible to reduce the output level to add the resistance between the pin(4) and V_{CC} line. The signal waveform is the rectangular wave, and the level is $500mV_{p-p}$ ($f_{OSC} = 1.45MHz$, typ.)
- The higher local oscillation frequency (f_{OSC}) to be, the lower buff output level to be owing to the load capacity. So, in the case that it is connected to other circuits, take care of the input capacity of these circuits and stray capacity of wire.

6. Tuning LED driver and stereo LED driver

- The tuning LED driver and stereo LED driver don't have current limit resistance shown in the right figure. So, it is necessary to add the current limit resistance: R_{10} , R_{11} .
- Set up the values of R_{10} , R_{11} to keep the drive currents ID_{10} , ID_{11} under 10mA.

7.FM detection circuit

For the FM detection circuit,detection coil is able to use instead of ceramic discriminator.

Recommended circuit and recommended coil are as follows.

In this case, please take care that V_{in} (lim.) falls a little.

Test Frequency	C_o (pF)	Q_o	Turns				Wire (mmφ)	REF
			1-2	2-3	1-3	4-6		
10.7MHz	100	100	—	—	12	—	0.12 UEW	SUMIDA ELECTRIC CO., LTD 2153-4095-189 or equivalent

8. FM / AM switch and forced monaural switch

FM / AM switch over and stere / forced monaural switch over are done by internal PNP transistors ON / OFF which are connected to pin(16) and pin (17) respectively.

The threshold voltages of these PNP transistors are $V_{th} = V_{CC}$, and for switching, we recommend to use mechanical switch.

(Direct short to V_{CC} line.)

In the case of the electrical switch over by transistor, set up V_{CE} (saturation voltage between collector and emitter) 50mV or less, otherwise there are some cases that it does not become the AM mode and force monaural mode.

When these external switches are ON, the currents which flow into pin(16) and pin(17) are 100 μ A and 20 μ A respectively. (Typical value at $V_{CC} = 3V$)

Maximum Ratings ($T_a = 25^{\circ}C$)

Characteristic	Symbol	Rating	Unit
Supply voltage	V_{CC}	8	V
LED current	I_{LED}	10	mA
LED voltage	V_{LED}	8	V
Power dissipation	TA8132ANG	PD (Note)	mW
	TA8132AFG		
Operating Temperature	T_{opr}	-25~75	$^{\circ}C$
Storage temperature	T_{stg}	-55~150	$^{\circ}C$

(Note): Derated above $25^{\circ}C$ in the proportion of 9.6mW / $^{\circ}C$ for TA8132ANG, TA2012NG and of 3.2mW / $^{\circ}C$ for TA8132AFG, TA2012FG.

Electrical characteristics

Unless Otherwise Specified, $T_a = 25^\circ\text{C}$, $V_{CC1} = 3\text{V}$, $SW_1 \rightarrow 10\text{k}\Omega$, $SW_3 \rightarrow \text{OFF}$
 FM IF: $f = 10.7\text{MHz}$, $\Delta f = \pm 22.5\text{kHz}$, $f_m = 1\text{kHz}$
 AM: $f = 1\text{MHz}$, $\text{MOD} = 30\%$, $f_m = 1\text{kHz}$
 MPX: $f_m = 1\text{kHz}$

About solderability, following conditions were confirmed

- Solderability

- (1) Use of Sn-63Pb solder Bath

- solder bath temperature = 230°C
 - dipping time = 5 seconds
 - the number of times = once
 - use of R-type flux

- (2) Use of Sn-3.0Ag-0.5Cu solder Bath

- solder bath temperature = 245°C
 - dipping time = 5 seconds
 - the number of times = once
 - use of R-type flux
