Frequency Range: Dimensions

Description: 78 PQ CORE

Application: Inductive Components

Where Used: Closed Magnetic Circuit

Part Type: PQ Cores

Generic Name: PQ40/40

Mechanical Specifications

Weight: 97.000 (g)

Part Type Information

PQ20/16, PQ20/20, PQ26/20, PQ26/25, PQ32/20, PQ32/30, PQ35/35, PQ40/40, PQ50/50

PQ cores were developed for use in power applications. The large surface area to volume of the core aids in heat dissipation. PQ cores are employed both in filter and transformer designs for switch mode power supplies.

-PQ cores can be supplied with the centerpost gapped to a mechanical dimension.

-PQ cores can also be supplied to an AL value, these would be supplied in sets.

Preferred parts, the suggested choice for new designs, have shorter lead times and are more readily available.

The column H(Oe) gives for each bead the calculated dc bias field in oersted for 1 turn and 1 ampere direct current. The actual dc H field in the application is this value of H times the actual NI (ampere-turn) product. For the effect of the dc bias on the impedance of the bead material, see figures 18-23 in the application note How to choose Ferrite Components for EMI Suppression.

A 1/2 turn is defined as a single pass through a hole.

$\sum I/A$ - Core Constant

A_e - Effective Cross-Sectional Area

A_L - Inductance Factor ($\frac{L}{N^2}$)

N/AWG - Number of Turns/Wire Size for Test Coil

I_e : Effective Path Length

V_e : Effective Core Volume

NI - Value of dc Ampere-turns
