

MEMS audio sensor omnidirectional digital microphone

Datasheet - production data

Features

- Single supply voltage
- Low power consumption
- 120 dBSPL acoustic overload point
- 61 dB signal-to-noise ratio
- Omnidirectional sensitivity
- 26 dBFS sensitivity
- PDM output
- HCLGA package
 - Top-port design
 - SMD-compliant
 - EMI-shielded
 - ECOPACK®, RoHS, and "Green" compliant

- VoIP
- · Speech recognition
- A/V eLearning devices
- Gaming and virtual reality input devices
- Digital still and video cameras
- Antitheft systems

Description

The MP34DT01-M is an ultra-compact, low-power, omnidirectional, digital MEMS microphone built with a capacitive sensing element and an IC interface.

The sensing element, capable of detecting acoustic waves, is manufactured using a specialized silicon micromachining process dedicated to produce audio sensors.

The IC interface is manufactured using a CMOS process that allows designing a dedicated circuit able to provide a digital signal externally in PDM format.

The MP34DT01-M has an acoustic overload point of 120 dBSPL with a 61 dB signal-to-noise ratio and –26 dBFS sensitivity.

The MP34DT01-M is available in a top-port, SMD-compliant, EMI-shielded package and is guaranteed to operate over an extended temperature range from -40 °C to +85 °C.

Applications

- Mobile terminals
- Laptop and notebook computers
- Portable media players

Figure 4. MP34DT01-M electrical connections (Top view) 10 μF 100 nF Dout L/R CLK Ground ring GAMS0408140920SG

Power supply decoupling capacitors (100 nF ceramic, 10 μ F ceramic) should be placed as near as possible to pin 1 of the device (common design practice).

The L/R pin must be connected to Vdd or GND (refer to Table 5).

MP34DT01-M Sensing element

4 Sensing element

The sensing element shall mean the acoustic sensor consisting of a conductive movable plate and a fixed plate placed in a tiny silicon chip. This sensor transducers the sound pressure into the changes of coupled capacity between those two plates.

Omron Corporation supplies this element for STMicroelectronics.

5 Absolute maximum ratings

Stresses above those listed as "absolute maximum ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device under these conditions is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

Table 6. Absolute maximum ratings

Symbol	Ratings	Maximum value	Unit
Vdd	Supply voltage	-0.3 to 6	V

ESD	3 discharges at \pm 8 kV direct contact to lid when unit is grounded (IEC 61000-4-2) and 3 discharges at \pm 2 kV direct contact to I/O pins. (MIL 883E, Method 3015.7)	±8	kV

This device is sensitive to mechanical shock, improper handling can cause permanent damage to the part.

This device is ESD-sensitive, improper handling can cause permanent damage to the part.

MP34DT01-M Functionality

6 Functionality

6.1 L/R channel selection

The L/R digital pad lets the user select the DOUT signal pattern as shown in *Table 7*. The L/R pin must be connected to Vdd or GND.

GND	Data valid	High impedance
Vdd	High impedance	Data valid

7 Package mechanical data

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK[®] packages, depending on their level of environmental compliance. ECOPACK[®] specifications, grade definitions and product status are available at: www.st.com. ECOPACK[®] is an ST trademark.

Soldering information

The HCLGA 3x4 4LD package is also compliant with the RoHS and "Green" standards and is qualified for soldering heat resistance according to JEDEC J-STD-020.

Landing pattern and soldering recommendations are available at www.st.com.

9 Process recommendations

To ensure a consistent manufacturing process it is strongly advised to comply with following recommendations:

- The recommended pick-up area for the MP34DT01-M package must be defined using the worst case (ie. no device alignment during picking process). This area has been defined considering all the tolerances of the components involved (reel, package, sound inlet). Picker tolerance shall be considered as well.
- To prevent damage to the MEMS membrane or incorrect pick-up and placement, do not pick up the component on the inlet area
- For the package outline please refer to Figure 10. Nozzle shape, size, and
 placement accuracy are the other key factors to consider when deciding on the
 coordinates for the picking.
- Device alignment before picking is highly recommended.
- A vacuum force greater than 7 psi must be avoided
- 1 kPa = 0.145 psi (lb/in2) = 0.0102 kgf/cm² = 0.0098 atm
- All the recommended dimensions (device safe pick area) do not include the pick and place equipment tolerances
- According to Figure 10, standard picker tool can be used to handle this device
