FUNCTIONAL DESCRIPTION

The TDA7052 is a mono output amplifier designed for battery-fed portable audio applications, such as tape recorders and radios.
The gain is fixed internally at 40 dB. A large number of tape recorders and radios are still designed for mono sound, plus a space-saving trend by reduction of the number of battery cells. This means a decrease in supply voltage which results in an reduction of output power. To compensate for this reduction, the TDA7052 uses the Bridge-Tied Load principle (BTL) which can deliver an output power of 1,2 W (THD = 10%) into an 8 Ω load with a power supply of 6 V. The load can be short-circuited at each signal excursion.

POWER DISSIPATION

Assume V_P = 6 V, R_L = 8 Ω, T_{amb} = 50 °C maximum

The maximum sinewave dissipation is 0,9 W.

$$R_{th\,j\text{-}a} = \frac{150 - 50}{0,9} \approx 110 \text{ K/W}.$$

Where $R_{th\,j\text{-}a}$ of the package is 110 K/W, so no external heatsink is required

CHARACTERISTICS

V_P = 6 V; R_L = 8 Ω; f = 1 kHz; T_{amb} = 25 °C; unless otherwise specified.

Notes to the characteristics

1. The unweighted RMS noise output voltage is measured at a bandwidth of 60 Hz to 15 kHz with a source impedance (R_S) of 5 kΩ.
2. The RMS noise output voltage is measured at a bandwidth of 5 kHz with a source impedance of 0 Ω and a frequency of 500 kHz. With a practical load (R = 8 Ω; L = 200 μH) the noise output current is only 100 nA.
3. Ripple rejection is measured at the output with a source impedance of 0 Ω and a frequency between 100 Hz and 10 kHz. The ripple voltage = 200 mV (RMS value) is applied to the positive supply rail
