

DS36C278

Low Power Multipoint EIA-RS-485 Transceiver

General Description

The DS36C278 is a low power differential bus/line transceiver designed to meet the requirements of RS-485 standard for multipoint data transmission. In addition it is compatible with TIA/EIA-422-B.

The CMOS design offers significant power savings over its bipolar and ALS counterparts without sacrificing ruggedness against ESD damage. The device is ideal for use in battery powered or power conscious applications. I_{CC} is specified at 500 μ A maximum.

The driver and receiver outputs feature TRI-STATE® capability. The driver outputs operate over the entire common mode range of $-7V$ to $+12V$. Bus contention or fault situations that cause excessive power dissipation within the device are handled by a thermal shutdown circuit, which forces the driver outputs into the high impedance state.

The receiver incorporates a fail safe circuit which guarantees a high output state when the inputs are left open. (Note 1)

The DS36C278T is fully specified over the industrial temperature range ($-40^{\circ}C$ to $+85^{\circ}C$).

Features

- 100% RS-485 compliant
 - Guaranteed RS-485 device interoperation
- Low power CMOS design: I_{CC} 500 μ A max
- Built-in power up/down glitch-free circuitry
 - Permits live transceiver insertion/displacement
- DIP and SOIC packages available
- Industrial temperature range: $-40^{\circ}C$ to $+85^{\circ}C$
- On-board thermal shutdown circuitry
 - Prevents damage to the device in the event of excessive power dissipation
- Wide common mode range: $-7V$ to $+12V$
- Receiver open input fail-safe (Note 1)
- $\frac{1}{4}$ unit load (DS36C278): ≥ 128 nodes
- $\frac{1}{2}$ unit load (DS36C278T): ≥ 64 nodes
- ESD (human body model): ≥ 2 kV
- Drop in replacement for:
 - LTC485, MAX485, DS75176, DS3695

Switching Characteristics (Notes 4, 9) (Continued)

Note 2: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" specifies conditions of device operation.

Note 3: Current into device pins is defined as positive. Current out of device pins is defined as negative. All voltages are referenced to ground except V_{OD1} and V_{OD2} .

Note 4: All typicals are given for: $V_{CC} = +5.0V$, $T_A = +25^\circ C$.

Note 5: Delta $|V_{OD2}|$ and Delta $|V_{OC}|$ are changes in magnitude of V_{OD2} and V_{OC} , respectively, that occur when input changes state.

Note 6: Threshold parameter limits specified as an algebraic value rather than by magnitude.

Note 7: Hysteresis defined as $V_{HST} = V_{TH} - V_{TL}$.

Note 8: I_{IN} includes the receiver input current and driver TRI-STATE leakage current.

Note 9: C_L includes probe and jig capacitance.

Note 10: For complete details of test, see RS-485.

TABLE 1. Device Pin Descriptions

Pin No.	Name	Description
1	RO	Receiver Output: When RE (Receiver Enable) is LOW, the receiver is enabled (ON), if $DO/RI \geq DO^*/RI^*$ by 200 mV, RO will be HIGH. If $DO/RI \leq DO^*/RI^*$ by 200 mV, RO will be LOW. Additionally RO will be HIGH for OPEN (Non-terminated) Inputs.
2	RE*	Receiver Output Enable: When RE* is LOW the receiver output is enabled. When RE* is HIGH, the receiver output is in TRI-STATE (OFF).
3	DE	Driver Output Enable: When DE is HIGH, the driver outputs are enabled. When DE is LOW, the driver outputs are in TRI-STATE (OFF).
4	DI	Driver Input: When DE (Driver Enable) is HIGH, the driver is enabled, if DI is LOW, then DO/RI will be LOW and DO^*/RI^* will be HIGH. If DI is HIGH, then DO/RI is HIGH and DO^*/RI^* is LOW.
5	GND	Ground Connection.
6	DO/RI	Driver Output/Receiver Input, 485 Bus Pin.
7	DO^*/RI^*	Driver Output/Receiver Input, 485 Bus Pin.
8	V_{CC}	Positive Power Supply Connection: Recommended operating range for V_{CC} is +4.75V to +5.25V.

Unit Load

A unit load for an RS-485 receiver is defined by the input current versus the input voltage curve. The gray shaded region is the defined operating range from $-7V$ to $+12V$. The top border extending from $-3V$ at 0 mA to $+12V$ at $+1\text{ mA}$ is defined as one unit load. Likewise, the bottom border extending from $+5V$ at 0 mA to $-7V$ at -0.8 mA is also defined as one unit load (see Figure 18). An RS-485 driver is capable of driving up to 32 unit loads. This allows up to 32 nodes on a single bus. Although sufficient for many applications, it is sometimes desirable to have even more nodes. For example, an aircraft that has 32 rows with 4 seats per row would benefit from having 128 nodes on one bus. This would allow signals to be transferred to and from each individual seat to 1 main station. Usually there is one or two less seats in the last row of the aircraft near the restrooms and food storage area. This frees the node for the main station.

The DS36C278, the DS36C279, and the DS36C280 all have $\frac{1}{2}$ unit load and $\frac{1}{4}$ unit load (UL) options available. These devices will allow up to 64 nodes or 128 nodes guaranteed over temperature depending upon which option is selected. The $\frac{1}{2}$ UL option is available in industrial temperature and the $\frac{1}{4}$ UL is available in commercial temperature.

First, for a $\frac{1}{2}$ UL device the top and bottom borders shown in Figure 18 are scaled. Both 0 mA reference points at $+5V$ and $-3V$ stay the same. The other reference points are $+12V$ at $+0.5\text{ mA}$ for the top border and $-7V$ at -0.4 mA for the bottom border (see Figure 18). Second, for a $\frac{1}{4}$ UL device the top and bottom borders shown in Figure 18 are scaled also. Again, both 0 mA reference points at $+5V$ and $-3V$ stay the same. The other reference points are $+12V$ at $+0.25\text{ mA}$ for the top border and $-7V$ at -0.2 mA for the bottom border (see Figure 18).

The advantage of the $\frac{1}{2}$ UL and $\frac{1}{4}$ UL devices is the increased number of nodes on one bus. In a single master multi-slave type of application where the number of slaves exceeds 32, the DS36C278/279/280 may save in the cost of extra devices like repeaters, extra media like cable, and/or extra components like resistors.

The DS36C279 and DS36C280 have an additional feature which offers more advantages. The DS36C279 has an automatic sleep mode function for power conscious applications. The DS36C280 has a slew rate control for EMI conscious applications. Refer to the sleep mode and slew rate control portion of the application information section in the corresponding datasheet for more information on these features.
