Pressure Gauge Guide

Procedure for setting the limit gauge indicator

- (1) Before setting the (green) limit indicator, turn the cover counterclockwise (approximately 6 to 7mm) until it stops. Then, remove by pulling it towards you.

- (2) Use a flat head screwdriver (with a 2.9mm blade width) to set the (green) limit indicator. Be careful not to bend the other needle or damage the dial plate.

- (3) After completing the setting, replace the cover. Fit the cover by aligning the cutout in the cover to the groove on the top of the black case. Turn the cover clockwise (approximately 6 to 7mm) and make sure that the matching mark on the cover is aligned with the groove on the top of the case.

⚠️ Precautions

Be sure to read before handling. Refer to p.0-26 and 0-27 for Safety Instruction and common precautions on the products mentioned in this catalogue.

Selection

⚠️ Caution

- ① Do not apply high load voltage (current) or surge current as this can cause the switch to malfunction.
- ② Make sure that no direct impact or vibrations are applied to the body.
- ③ If operating under pressure pulsations or in high frequency operations, contact SMC.

Installation

⚠️ Caution

- ① During transport and installation, do not apply shock to the product, such as by dropping doing so will affect its precision.
- ② In terms of its installation posture, place it perpendicular to the ground, with the zero point on the dial of the pressure gauge facing down.
- ③ Do not install it in an area that is exposed to high temperature or humidity, because doing so will lead to improper operation.
- ④ To screw in the pressure gauge, make sure to turn the gauge by placing a wrench over the square wrench flats. If the pressure gauge is screwed in by holding it on some other area, it could lead to air leakage or damage.

Procedure for setting the limit gauge indicator and the setting needle

- (1) Before setting the limit indicator and the (green) setting needle, turn the cover counterclockwise (approximately 6 to 7mm) until it stops. Then, remove by pulling it towards you.

- (2) Use a flat head screwdriver (with a 2.9mm blade width) to set the (green) limit indicator. Be careful not to bend the other needle or damage the dial plate.

- (3) Before setting the setting needle, use a flat head screwdriver (with a 2.9mm blade width) to turn the setting screw and set the setting needle to the set pressure.

- (4) After completing the setting, replace the cover. Fit the cover by aligning the cutout in the cover to the groove on the top of the black case. Turn the cover clockwise (approximately 6 to 7mm) until it stops. Make sure that the matching mark on the cover is aligned with the groove on the top of the case.

Procedure for assembling the cover ring assembly

• General purpose gauge

• Gauge with pressure switch

1. Remove the small screw (1 position) from the pressure gauge.
2. Place the cover ring on the pressure gauge.
3. Using the small screw that is provided with the cover ring, install the over ring. The installation torque is 0.3 to 0.5N.m.
