- 1. 1. Open Circuit Inductance (OCL) Test Parameters: 100 kHz, 0.1 Vrms, 0.0 Adc.
- 2. Irms: DC current for an approximate  $\Delta T$  of 40 °C without core loss. Derating is necessary for AC currents. PCB layout, trace thickness and width, air-flow, and proximity of other heat generating components will affect the temperature rise. It is recommended that the temperature of the part not exceed 125 °C under worst case operating conditions verified in the end application
- 3. Isat: Peak current for approximately 30% rolloff @ 25 °C.

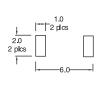

- 4. K-factor: Used to determine B p-p for core loss (see graph). B p-p =  $K^*L^*\Delta I$ , B p-p(mT), K: (K factor from table),
- L: (Inductance in uH),  $\Delta$ I (Peak to peak ripple current in Amps). 5. Part Number Definition: SD53-xxx-R
- SD53 = Product code and size; -xxx = Inductance value in uH; R = decimal point;
- If no R is present then third character equals the number of zeros.
- -R suffix = RoHS compliant.
