

GLC65 Commercial/GLM65 Medical 65 Watt Multiple Output Global Performance Switchers

SPECIFICATIONS:

Ac Input

90-264 Vac, 47-63 Hz single phase

Output Power

Total continuous output power is 60 W, 75 W peak for 60 s 10% duty cycle. Total continuous rating with 150 LFM of air is 70 W.

Input Current

Units are exempt from input current harmonic requirements of EN61000-3-2 when output power is less than 62W. Maximum input current at minimum input voltage and output overload will be less than 2.0 A.

Inrush Current

Inrush is limited by internal thermistor. The inrush at 240 Vac, averaged over the first ac half-cycle under cold start conditions will not exceed 37 A.

Input Protection

Internal AC fuse provided on all units. Designed to blow only if a catastrophic failure occurs in the unit -- Fuse does not blow on short circuit or unsustained overload.

Holdup Time

Output voltage stays within regulation for 20 ms from loss of ac input at 65 W load, from 120 Vac input.

Efficiency

80% typical.

Overload Protection

Fully protected against short circuit and output overload. Short circuit protection is cycling type power limit and will automatically recover after removal of fault.

Overvoltage Protection

Built in with firing point set. OVP firing reduces output to less than 50% of nominal voltage in less than 50 ms.

Output Noise

0.5% rms, 1% pk-pk, 20 MHz Bandwidth, differential mode. Measured with scope probe directly across output terminals of the power supply with load terminated with 1 μ F capacitor.

Transient Response

Main Output - 500 μ s typical response time for return to within 0.5% of final value for a 50% load step within the regulation limits of minimum and maximum load, $\Delta i/\Delta t < 0.2$ A/ μ s. Maximum voltage deviation is 3.5%.

Notes:

- Continuous individual output ratings for unrestricted convection cooling. Combination of individual output loads must not exceed total power rating.
- Peak rating for 60 s 10% duty cycle or continuous rating 150 LFM forced air cooling.
- Adjustment on V1 varies all outputs simultaneously (1% on V1 @ 1% on V2 & V3).
- Total combined current of V1 & V2 not to exceed 12 A. Combination of individual output loads must not exceed total power rating.
- Total regulation is defined as maximum deviation from the initial set point. With all other outputs at 50% load, output under test can be varied from 0 to 100% load and varied to any ac line voltage. Initial set point is 1% on V1, 2% on V2 and 3% on V3

- Units should be allowed to warm up/operate under non-condensing conditions before application of power. Derate output current and total output power by 2.5% per °C above 50°C. Derate output power and current on all outputs by 2.5 % per °C. For operation in a confined space, moving air may be required. Under all conditions, the cooling vs. load profile should be such that heat sinks and/or heatsink temperatures do not exceed 90 °C for extended periods.
