

Performance power entry module

FN 329

- up to 6A current ratings
 - IEC 950-compliant
 - integrated earth line choke
 - optional medical version (B type)
-
- Nennstrom bis 6A
 - IEC 950 konform
 - Integrierte Erdleiterdrossel
 - Für medizinische Geräte als Option (Typ B)
-
- courants de service pouvant atteindre 6A
 - conforme à CEI 950
 - self de terre intégrée
 - version médicale en option (type B)

Filter selection table

Choose the family FN xxx with the required body style and features, and add -?? to determine current rating, and /?? for output connections. Example: FN 329-1/05 is a horizontal screw-mounting filter, rated for 1A, with fast-on outputs.

Family	Current ratings A at 40°C (25°)			Output connection		Housing
	1 (1.2)	3 (3.6)	6 (7.3)			
FN 329 -?? /??	-1	-3	-6	/01	/05	✓
Inductance L mH						
	6.3	1.25	0.48			

Approvals

Additional specifications

Filter type	Capacitance		Maximum leakage µA/phase	Res. R MΩ	Earth L _E mH	Weight g	Maximum operating voltage		Operating frequency Hz	Hipot test voltage	
	C _x nF	C _y nF					VAC	Hz		PN→E VAC	P→N VDC
All standard types	47	3.3	290	-	0.4	55	250	50/60	DC to 400	2000	1700
B types (medical)	47	-	2	1	0.4	55	250	50/60	DC to 400	2500	1700

MTBF at 40°C, 230V, per Mil-HB-217F: 600,000 hours

FN 329 insertion loss

Per CISPR 17; A = 50Ω/50Ω sym, B = 50Ω/50Ω asym, C = 0.1Ω/100Ω sym, D = 100Ω/0.1Ω sym

IEC-inlet filters

Time-to-Market

The most important reasons for choosing a catalog product lies in the rapid availability and the associated safety acceptances. Filter circuits with discrete components at the mains input can, of course, be built but do not necessarily represent the best solution particularly in products with a compressed development cycle such as in the PC field.

Standard IEC connector filters are a practical single-source solution. Thanks to their compact dimensions and supplementary options they offer numerous advantages to the user.

The following summary provides a simple and rapid means for making a filter pre-selection. Detailed information concerning the individual filters is given on the subsequent pages. Variants having an earth choke are designated by the letter "E" (e.g. FN 393E) and filters for medical applications by the letter "B" (e.g. FN 385B).

General technical information

Insertion loss

The insertion loss characteristics of the filters are measured in accordance with the CISPR 17 standard. Two test conditions are specified in Section 4.2 of the CISPR 17 standard namely input and output impedances of 50/50Ω and 0.1/100Ω. In general, the IEC inlet filters perform the same in the face of differential interference as in the 50Ω insertion loss test. In order to show the performance under realistic conditions, Schaffner also shows the attenuation curves obtained from the 0.1/100Ω test which are more meaningful for common mode interference. The inductance of the chokes used in the filters can change under load because of a saturation effect which can also affect the insertion loss.

Voltage ratings

The use of capacitors in accordance with IEC 384-14 means that Schaffner filters can be operated at voltages up to 10% over the nominal voltage rating.

Leakage current

The figure quoted for the leakage current to ground indicates the maximum value per phase at 230V/50Hz.

Switches

The switches used in the filters listed in this catalog have an in-rush current rating of up to 51A as defined in UL 1045, TV3.

Flammability classification

All the filters in this catalog comply with the requirements of UL 94V2 or UL 94V0.

Climatic classification

The filters made by Schaffner comply with the climatic classification 25/085/21 according to DIN IEC 68 Part 1 (ambient temperature -25°C to +85°C).

Component tolerances

	-Tol.	+Tol.	Test
Inductance	30%	50%	1kHz
Capacitance	20%	20%	1kHz
Resistance	10%	10%	DC

Current ratings

The nominal currents stated refer to an ambient temperature of 40°C. The maximum operating current at any other ambient temperature can be calculated by means of the following formula:

$$I = I_N \sqrt{(85 - \theta)/45}$$

Schaffner filters with IEC inlets

It is easy to determine which family of filters would be suitable for your particular application on the basis of the current range and insertion loss values together with the more important remarks shown at the right. Detailed technical information concerning each filter family can be found on the following pages.
