

Low-profile microSD card adapter for Raspberry Pi -  
ID: 966

Description

Make your Pi a little slimmer with this microSD card adapter board. It slides in where the SD card goes but is half the length. Pop in a microSD card for a sleeker machine. The microSD card holder is a push-push type so you can push on the edge that sticks out to remove the card when necessary.

**MicroSD card and Raspberry Pi NOT INCLUDED**
