THE PROFESSIONAL'S CHOICE!

TOWER PLASTIC CABLE CLIPS are designed and manufactured from high quality materials. The tough plastic material has been specially selected to suit the requirement according to application, style and size of clip.

The hardened steel pins, are pre-assembled into the clips for maximum utility, being made from a high carbon steel — critically heat-treated, then bright zinc electroplated.

For small bell-wire type cables the PT, PM and SM clips cover most requirements.

The 'FLAT' clip range originated by TOWER for the

CMA TWIN & EARTH cables, have virtually become 'standard' with the trade.

For ROUND cables, TOWER clips are available to accommodate a wide series of cable diameters.

ALL TOWER plastic clips with pre-assembled hardened and plated steel nails provide a professional and low cost fixing.

TOWER SINGLE BLOW

The Tower Single Blow Clip design is a simple one piece operation giving a labour cost saving and a quick easy method of installation into metal, concrete and brickwork for fixing both cable and pipe.

Tower Single Blow Clips are recommended for the installation of central heating pipes by the one operation thus avoiding the use of a clip, screw and plug giving labour cost saving.

The range of clips are supplied to cover diameters from 6mm to 18mm.
