

Quad PLL Programmable Clock Generator with Spread Spectrum

Features

- Four fully integrated phase locked loops (PLLs)
 - External crystal: 8 to 48 MHz for CY2544 and CY2546
 - External reference: 8 to 166 MHz clock
- Reference clock input voltage range
 - 2.5 V, 3.0 V, and 3.3 V for CY2548
 - 1.8 V for CY2544 and CY2546
- Wide operating output frequency range
 - 3 to 166 MHz
- Programmable spread spectrum with center and down spread option and Lexmark and Linear modulation profiles
- VDD supply voltage options:
 - 2.5 V, 3.0 V, and 3.3 V for CY2544 and CY2548
 - 1.8 V for CY2546
- Selectable output clock voltages:
 - 2.5 V, 3.0 V, and 3.3 V for CY2544 and CY2548
 - 1.8 V for CY2546
- Frequency select feature with option to select eight different frequencies over nine clock outputs
- Power down, output enable, and SS ON/OFF controls
- Low jitter, high accuracy outputs

- Ability to synthesize nonstandard frequencies with Fractional-N capability
- Up to nine clock outputs with programmable drive strength
- Glitch free outputs while frequency switching
- 24-pin QFN package
- Commercial and Industrial temperature ranges

Benefits

- Multiple high performance PLLs allow synthesis of unrelated frequencies
- Nonvolatile programming for personalization of PLL frequencies, spread spectrum characteristics, drive strength, crystal load capacitance, and output frequencies
- Application specific programmable EMI reduction using spread spectrum for clocks
- Programmable PLLs for system frequency margin tests
- Meets critical timing requirements in complex system designs
- Suitability for PC, consumer, portable, and networking applications
- Capable of Zero PPM frequency synthesis error
- Uninterrupted system operation during clock frequency switch
- Application compatibility in standard and low power systems

Pin Definitions

CY2546 (VDD = 1.8 V Supply)

Pin Number	Name	I/O	Description
1	GND	Power	Power supply ground
2	CLK1	Output	Programmable clock output. Output voltage depends on VDD_CLK_B1 voltage
3	VDD_CLK_B1	Power	Power supply for bank1, (CLK1, CLK2, CLK3) Outputs. 1.8 V
4	PD#/OE	Input	Multifunction programmable pin. Output enable or power down mode
5	VDD	Power	Power supply. 1.8 V
6	CLK2	Output	Programmable clock output. Output voltage depends on VDD_CLK_B1 voltage
7	GND	Power	Power supply ground
8	CLK3/FS0	Output/Input	Multifunction programmable pin. Programmable clock output or frequency select input pin. Output voltage of CLK3 depends on VDD_CLK_B1 voltage
9	OE/FS1	Input	Multifunction programmable pin. Output enable or frequency select pin
10	CLK4/FS2	Output/Input	Multifunction programmable pin. Programmable clock output or frequency select input pin. Output voltage of CLK4 depends on VDD_CLK_B2 voltage
11	CLK5	Output	Programmable clock output. Output voltage depends on VDD_CLK_B2 voltage
12	GND	Power	Power supply ground
13	CLK6	Output	Programmable clock output. Output voltage depends on VDD_CLK_B2 voltage
14	VDD_CLK_B2	Power	Power supply for bank2, (CLK4, CLK5, CLK6) Outputs. 1.8 V
15	CLK7/SSON	Output/input	Multifunction programmable pin. Programmable clock output or spread spectrum ON/OFF control input pin. Output voltage of CLK7 depends on VDD_CLK_B3 voltage
16	VDD_CLK_B3	Power	Power supply for bank3, (CLK7, CLK8, CLK9) Outputs. 1.8 V
17	CLK8	Output	Programmable clock output. Output voltage depends on VDD_CLK_B3 voltage
18	GND	Power	Power supply ground
19	GND	Power	Power supply ground
20	CLK9	Output	Programmable clock output. Output voltage depends on VDD_CLK_B3 voltage
21	CLKIN	Input	External 1.8 V low voltage reference clock input
22	VDD	Power	Power supply. 1.8 V
23	XOUT	Output	Crystal output
24	XIN/EXCLKIN	Input	Crystal input or 1.8 V external clock input

General Description

Four Configurable PLLs

The CY2544, CY2548 and CY2546 have four programmable PLLs that can be used to generate output frequencies ranging from 3 to 166 MHz. The advantage of having four PLLs is that a single device generates up to four independent frequencies from a single crystal.

Input Reference Clocks

The input to the CY2544, CY2548 and CY2546 can be either a crystal or a clock signal. The input frequency range for crystal (XIN) is 8 MHz to 48 MHz and that for external reference clock (EXCLKIN) is 8 MHz to 166 MHz. The voltage range for the reference clock input of CY2548 is 2.5 V/3.0 V/3.3 V while that

for CY2544 and CY2546 is 1.8 V. This gives user an option for this device to be compatible for different input clock voltage levels in the system.

There is provision for a secondary reference clock input, CLKIN with applied frequency range of 8 MHz to 166 MHz. When CLKIN signal at pin 21 is used as a reference input to the PLL, a valid signal at EXCLKIN (as specified in the AC and DC Electrical Specification table) must be present for the devices to operate properly.

Multiple Power Supplies

These devices are designed to operate at internal supply voltage of 1.8 V. In the case of the high voltage part (CY2544/CY2548), an internal regulator is used to generate 1.8 V from the 2.5 V/3.0 V/3.3 V VDD supply voltage at pin 22. For the low

voltage part (CY2546), this internal regulator is bypassed and 1.8 V at VDD pin 22 is directly used.

Output Bank Settings

There are nine clock outputs grouped in three output driver banks. The Bank 1, Bank 2, and Bank 3 correspond to (CLK1, CLK2, CLK3), (CLK4, CLK5, CLK6), and (CLK7, CLK8, CLK9) respectively. Separate power supplies are used for each of these banks and they can be any of 2.5 V, 3.0 V, or 3.3 V for CY2544/CY2548 and 1.8 V for CY2546 giving user multiple choice of output clock voltage levels.

Output Source Selection

These devices have programmable input sources for each of its nine clock outputs (CLK1–9). There are six available clock sources for these outputs. These clock sources are: XIN/EXCLKIN, CLKIN, PLL1, PLL2, PLL3, or PLL4. Output clock source selection is done using four out of six crossbar switch. Thus, any one of these six available clock sources can be arbitrarily selected for the clock outputs. This gives user a flexibility to have up to four independent clock outputs.

Spread Spectrum Control

Two of the four PLLs (PLL3 and PLL4) have spread spectrum capability for EMI reduction in the system. The device uses a Cypress proprietary PLL and spread spectrum clock (SSC) technology to synthesize and modulate the frequency of the PLL. The spread spectrum feature can be turned on or off using a multifunction control pin (CLK7/SSON). It can be programmed to either center spread range from $\pm 0.125\%$ to $\pm 2.50\%$ or down spread range from -0.25% to -5.0% with Lexmark or Linear profile.

Frequency Select

There are three multifunction frequency select pins (FS0, FS1 and FS2) that provide an option to select eight different sets of frequencies among each of the four PLLs. Each output has programmable output divider options.

Glitch-Free Frequency Switch

When the frequency select pin (FS) is used to switch frequency, the outputs are glitch-free provided frequency is switched using output dividers. This feature enables uninterrupted system operation while clock frequency is being switched.

PD#/OE Mode

PD#/OE (Pin 4) can be programmed to operate as either power down (PD#) or output enable (OE) mode. PD# is a low-true input. If activated it shuts off the entire chip, resulting in minimum power consumption for the device. Setting this signal high brings the device in the operational mode with default register settings.

When this pin is programmed as Output Enable (OE), clock outputs can be enabled or disabled using OE (pin 4). Individual clock outputs can be programmed to be sensitive to this OE pin.

Output Drive Strength

The DC drive strength of the individual clock output can be programmed for different values. Table 1 shows the typical rise and fall times for different drive strength settings.

Table 1. Output Drive Strength

Output Drive Strength	Rise/Fall Time (ns) (Typical Value)
Low	6.8
Mid Low	3.4
Mid High	2.0
High	1.0

Generic Configuration and Custom Frequency

There is a generic set of output frequencies available from the factory that can be used for the device evaluation purposes. The devices, CY2544, CY2548 and CY2546 can be custom programmed to any desired frequencies and listed features. For customer specific programming, please contact local Cypress Field application engineer (FAE) or sales representative.

Absolute Maximum Conditions

Parameter	Description	Condition	Min	Max	Unit
V _{DD}	Supply voltage for CY2544/CY2548		-0.5	4.5	V
V _{DD}	Supply voltage for CY2546		-0.5	2.6	V
V _{DD_CLK_BX}	Output bank supply voltage		-0.5	4.5	V
V _{IN}	Input voltage for CY2544/CY2548	Relative to V _{SS}	-0.5	V _{DD} + 0.5	V
V _{IN}	Input voltage for CY2546	Relative to V _{SS}	-0.5	2.2	V
T _S	Temperature, storage	Non functional	-65	+150	°C
ESD _{HBM}	ESD protection (Human body model)	JEDEC EIA/JESD22-A114-E	2000	–	V
UL-94	Flammability rating	V-0 at 1/8 in.	–	10	ppm
MSL	Moisture sensitivity level		3		

Recommended Operating Conditions

Parameter	Description	Min	Typ	Max	Unit
V _{DD}	VDD Operating voltage for CY2544/CY2548	2.25	–	3.60	V
V _{DD}	VDD Operating voltage for CY2546	1.65	1.8	1.95	V
V _{DD_CLK_BX}	Output driver voltage for Bank 1, 2 and 3	1.65	–	3.60	V
T _{AC}	Commercial ambient temperature	0	–	+70	°C
T _{AI}	Industrial ambient temperature	-40	--	+85	°C
C _{LOAD}	Maximum load capacitance	–	–	15	pF
t _{PU}	Power up time for all V _{DD} to reach minimum specified voltage (power ramps must be monotonic)	0.05	–	500	ms

DC Electrical Specifications

Parameter	Description	Conditions	Min	Typ	Max	Unit
V _{OL}	Output low voltage	I _{OL} = 2 mA, drive strength = [00]	–	–	0.4	V
		I _{OL} = 3 mA, drive strength = [01]				
		I _{OL} = 7 mA, drive strength = [10]				
		I _{OL} = 12 mA, drive strength = [11]				
V _{OH}	Output high voltage	I _{OH} = -2 mA, drive strength = [00]	V _{DD_CLK_BX} - 0.4	–	–	V
		I _{OH} = -3 mA, drive strength = [01]				
		I _{OH} = -7 mA, drive strength = [10]				
		I _{OH} = -12 mA, drive strength = [11]				
V _{IL1}	Input low voltage of PD#/OE, FS0, FS1, FS2 and SSON	–	–	–	0.2 × V _{DD}	V
V _{IL2}	Input low voltage of CLKIN for CY2544/CY2548	–	–	–	0.1 × V _{DD}	V
V _{IL3}	Input low voltage of EXCLKIN for CY2544	–	–	–	0.15	V

DC Electrical Specifications (continued)

Parameter	Description	Conditions	Min	Typ	Max	Unit
V_{IL4}	Input low voltage of EXCLKIN for CY2548	—	—	—	$0.1 \times V_{DD}$	V
V_{IL5}	Input low voltage of CLKIN, EXCLKIN for CY2546	—	—	—	$0.1 \times V_{DD}$	V
V_{IH1}	Input high voltage of PD#/OE, FS0, FS1, FS2 and SSON	—	$0.8 \times V_{DD}$	—	—	V

PLL	Phase Locked Loop
PPM	Parts Per Million
SS	Spread Spectrum
SSC	Spread Spectrum Clock
SSON	Spread Spectrum On

Document Conventions

Units of Measure

Symbol	Unit of Measure
°C	degree Celsius
fF	femtofarad
MHz	megahertz
μs	microsecond
μW	microwatt
mA	milliampere
ms	millisecond
ns	nanosecond
Ω	ohm
ppm	parts per million
pF	picofarad
ps	picosecond
V	volt
W	watt

Document History Page

Document Title: CY2544/CY2546/CY2548, Quad PLL Programmable Clock Generator with Spread Spectrum Document Number: 001-12563				
Revision	ECN	Orig. of Change	Submission Date	Description of Change
**	690257	RGL	See ECN	New data sheet.
*A	790516	RGL	See ECN	Separated the Pin Configuration drawing into two to show the difference between CY2544 and CY2546 pinouts. Updated DC Electrical Specifications: Updated Test Conditions of I_{ILPDOE} parameter (Replaced "Internal pull up = 100k typical" with "No Internal pull up"). Changed maximum value of I_{ILPDOE} parameter from 10 μA to 1 μA. Updated Test Conditions of I_{IHPDOE} parameter (Replaced "Internal pull up = 100k typical" with "No Internal pull up"). Updated Test Conditions of I_{ILSR} parameter (Replaced "Internal pull down = 100k typical" with "Internal pull down = 160k typical"). Updated Test Conditions of I_{IHSR} parameter (Replaced "Internal pull down = 100k typical" with "Internal pull down = 160k typical"). Changed the maximum value of I_{IHSR} parameter from 10 μA to 25 μA. Removed maximum value of I_{DD} parameter (22 mA). Added typical value of I_{DD} parameter (15 mA).
*B	1508943	RGL / AESA	See ECN	Changed status from Preliminary to Final. Added Device Selection Guide. Updated Absolute Maximum Conditions: Changed condition of ESD_{HBM} parameter from "MIL-STD-883, Method 3015" to "JEDEC EIA/JESD22-A114-E". Updated DC Electrical Specifications: Removed V_{IL}, V_{IH}, V_{ILX}, V_{IHx} parameters and their details. Added V_{IL1}, V_{IH1}, V_{IL2}, V_{IH2}, V_{IL3}, V_{IH3}, V_{IL4}, V_{IH4}, V_{IL5}, V_{IH5} parameters and their details. Renamed I_{ILPDOE} parameter as I_{IL1}, updated test conditions and changed maximum value of the same parameter from 1 μA to 10 μA. Renamed I_{IHPDOE} parameter as I_{IH1}, updated test conditions and changed maximum value of the same parameter from 1 μA to 10 μA. Renamed I_{ILSR} parameter as I_{IL2} and changed maximum value of the same parameter from 1 μA to 10 μA. Renamed I_{IHSR} parameter as I_{IH2}, changed maximum value of the same parameter from 25 μA to 36 μA and also added minimum value of the same parameter as 14 μA. Added R_{DN} parameter and its details. Changed typical value of I_{DDS} value from 50 μA to 3 μA. Updated AC Electrical Specifications: Added T_{RF1}, T_{RF2}, T_{RF3}, T_{RF4} parameters and their details. Renamed T_{CCJ1} parameter as T_{CCJ} and added typical value. Removed T_{LTJ} parameter and its details.
*B (cont.)	1508943	RGL / AESA	See ECN	Updated Configuration Example for C-C Jitter: Removed details of "Long Term Jitter". Updated details corresponding to "Cycle-to-Cycle Jitter". Updated Recommended Crystal Specification: Removed C0 parameter and its details. Updated Recommended Crystal Specification: Removed C0 parameter and its details. Updated Ordering Information: Deleted generic part numbers.

Document History Page (continued)

Document Title: CY2544/CY2546/CY2548, Quad PLL Programmable Clock Generator with Spread Spectrum Document Number: 001-12563				
Revision	ECN	Orig. of Change	Submission Date	Description of Change
*C	2748211	TSAI	08/10/09	Post to external web.
*D	2764011	CXQ	09/15/09	Updated Ordering Information : Fixed typo (Changed CY2548Cxxx and CY2548CxxxT to CY2548lxxx and CY2548lxxxT for industrial temp parts).
*E	2899758	KVM	03/26/10	Updated Ordering Information . Updated Package Drawing and Dimensions . Updated copyright section.
*F	2969587	KVM	07/09/2010	Minor change: Added "with Spread Spectrum" in first page title to match spec title on the first page with spec title on the document history page.
*G	3115710	BASH	12/21/2010	Added Ordering Code Definitions . Added Acronyms and Units of Measure .
*H	4239875	CINM	01/08/2014	Updated Package Drawing and Dimensions : spec 51-85203 – Changed revision from *B to *D. Updated in new template. Completing Sunset Review.
*I	4586478	AJU	03/12/2014	Added related documentation hyperlink in page 1.

Sales, Solutions, and Legal Information

Worldwide Sales and Design Support

Cypress maintains a worldwide network of offices, solution centers, manufacturer's representatives, and distributors. To find the office closest to you, visit us at [Cypress Locations](#).
