

FEATURES AND BENEFITS

- Up to 500,000 duty cycles with 10 year life capability
- Hermetically sealed, stainless steel construction
- Low profile prismatic design
- Higher energy vs electrolytic capacitors
- Higher power vs batteries

TYPICAL APPLICATIONS

- Automotive subsystems
- Smart Meter
- Back up power for SSD and NV-DIMM
- Consumer electronics

PRODUCT SPECIFICATIONS

ESR AND CAPACITANCE VS TEMPERATURE

NOTES

- Capacitance and ESR_{DC} measured at 25°C using specified test current per waveform below.
- $\Delta T = I_{RMS}^2 \times ESR \times R_{th}$
- Absolute maximum voltage, non-repeated. Not to exceed 1 second.
- After 72 hours (208 hours - BCAP3400) at rated voltage. Initial leakage current can be higher.
- Per IEC 62391-2, $P_d = \frac{0.12V^2}{ESR_{DC} \times \text{mass}}$
- $P_{max} = \frac{V^2}{4 \times ESR_{DC} \times \text{mass}}$
- $E_{max} = \frac{\frac{1}{2} CV^2}{3,600 \times \text{mass}}$
- $E_{stored} = \frac{\frac{1}{2} CV^2}{3,600}$
- Cycle using specified test current per waveform below.
- Cycle life varies depending upon application-specific characteristics. Actual results will vary.
- Per United Nations material classification UN3499, all Maxwell ultracapacitors have less than 10 Wh capacity to meet the requirements of Special Provisions 361. Both individual ultracapacitors and modules composed of those ultracapacitors shipped by Maxwell can be transported without being treated as dangerous goods (hazardous materials) under transportation regulations.

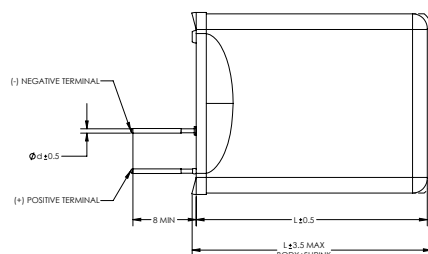

MOUNTING RECOMMENDATIONS

Do not reverse polarity. Please refer to document number 1008238, available at maxwell.com for soldering recommendations.

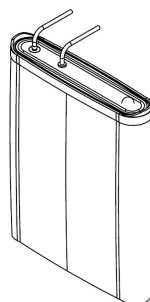

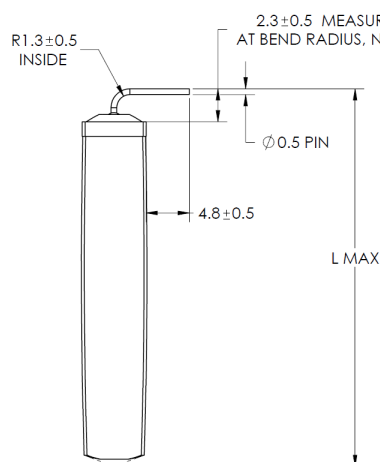

MARKINGS

Products are marked with the following information:
Rated capacitance, rated voltage, product number, name of manufacturer, and positive terminal.
