

DC-6.0 GHz 1.0W Packaged HFET

Mimix
BROADBAND™

April 2010 - Rev 05-Apr-10

✕ F1001-SC
✕ RoHS

Features

- ✕ 46.5 dBm OIP3 @ 5.8 GHz
- ✕ 15.5 dB Gain @ 2 GHz
- ✕ 10.0 dB Gain @ 6 GHz
- ✕ 30.0 dBm P1dB
- ✕ SOT-89 Package

General Description

The XF1001-SC is a high linearity Hetrojunction Field Effect Transistor (HFET) housed in an industry standard SOT-89 package. Optimum performance is achieved when the device is biased at a drain voltage of 8V and drain current of 300m. At this bias point, the device is capable of more than 30 dBm of P1dB and OIP3 of more than 46 dBm. The XF1001-SC is suitable for applications up to 6 GHz where it has 10 dB of gain.

Typical Performance: 8V, 25 °C

Parameter	Typical		Units
Frequency (F)	1900	5800	MHz
Gain (S21)	15.5	10.1	dB
Ourput IP3 (OIP3)	46.5	46.5	dBm
Output P1dB	30.0	30.0	dBm
Quiescent Current (Idq)	300	300	mA
Input Return Loss (S11)	-12.5	-22.5	dB
Output Return Loss (S22)	-7.5	-7.5	dB
Noise Figure (NF)	4.5	5.0	dB

P1dB at 5900 MHz can be improved to over 30 dBm at the expense of gain.

Functional Block Diagram

Absolute Maximum Ratings

Device Voltage (Vcc)	+9.0 V
Current (Icc)	450 mA
Power Dissipation (PDC)	4.5W
RF Input Power (RFin)	+24 dBm
Junction Temperature	175 °C
Thermal Resistance	30 °C/W
Storage Temperature (Tstg)	-55 °C to +150 °C
Operating Temperature	-40 °C to +85 °C
ESD (HBM)	Class 1A
Moisture Sensitivity Level (MSL)	MSL 1

Operation of this device beyond any of these parameters may cause permanent damage.

Electrical Characteristics (T=25°C, Vd=8V)

Unless otherwise specified, the following specifications are guaranteed at room temperature in a Mimix test fixture.

Parameter	Condition	Units	Min	Typ	Max
Frequency Range (F)		MHz	DC		6000
Test Frequency		MHz		1900	
Small Signal Gain (S21)	Externally matched	dB	13.5	15.5	
Output Intercept Point (OIP3)	Pout/Tone=13 dBm, Spacing=5 MHz	dBm	+44.0	+46.5	
Output P1dB		dBm	+29.0	+30.0	
Quiescent Current (Icq)		mA		300.0	330.0
Gate Voltage		V	-1.2	-0.85	-0.5
Noise Figure (NF)		dB		4.5

App Note [1] Biasing - The XF1001-SC requires power supply sequencing. Negative voltage supply (V_{gg}) needs to be turned on first and then positive voltage can be applied to the drain (V_{dd}). When turning off the device, the positive supply (V_{dd}) should be turned off first and then negative voltage (V_{gg}) can be removed.

The gate voltage is adjusted in order to set the drain current to the desired level. The gate voltage required to achieve a certain current can vary over temperature and from one device to another due to pinch-off voltage variation. Constant drain current can be achieved by implementing an active bias circuit which allows for temperature compensation and eliminates the effect of pinch off voltage variation.

Handling and Assembly Information

CAUTION! - Mimix Broadband MMIC Products contain gallium arsenide (GaAs) which can be hazardous to the human body and the environment. For safety, observe the following procedures:

- Do not ingest.
- Do not alter the form of this product into a gas, powder, or liquid through burning, crushing, or chemical processing as these by-products are dangerous to the human body if inhaled, ingested, or swallowed.
- Observe government laws and company regulations when discarding this product. This product must be discarded in accordance with methods specified by applicable hazardous waste procedures.

Life Support Policy - Mimix Broadband's products are not authorized for use as critical components in life support devices or systems without the express written approval of the President and General Counsel of Mimix Broadband. As used herein: (1) Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user. (2) A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

Package Attachment - This packaged product from Mimix Broadband is provided as a rugged surface mount package compatible with high volume solder installation. Care should be taken not to apply heavy pressure to the top or base material to avoid package damage. Vacuum tools or other suitable pick and place equipment may be used to pick and place this part. Care should be taken to ensure that there are no voids or gaps in the solder connection so that good RF, DC and ground connections are maintained. Voids or gaps can eventually lead not only to RF performance degradation, but reduced reliability and life of the product due to thermal stress.

Mimix Lead-Free RoHS Compliant Program - Mimix has an active program in place to meet customer and governmental requirements for eliminating lead (Pb) and other environmentally hazardous materials from our products. All Mimix RoHS compliant components are form, fit and functional replacements for their non-RoHS equivalents. Lead plating of our RoHS compliant parts is 100% matte tin (Sn) over copper alloy and is backwards compatible with current standard SnPb low-temperature reflow processes as well as higher temperature (260°C reflow) "Pb Free" processes.
