

W8 Miniatur Photoelectric Sensors

Small, fast and secure at close range

The W8 series of miniature photoelectric sensors offers features which include autocollimation, background suppression, laser diode and a reflex version for the reliable detection of transparent objects and materials. The standard housing design with integrated M3 threaded mounting holes, enables quick and simple installation possibilities for a wide range of industrial applications.

Whether in storage technology and materials handling, in packaging machinery or vending machines, in the printing or paper handling sector, performance is a critical factor. The range of the photoelectric reflex sensor is 3 m. The sensor, which features background suppression, reliably operates up to 300 mm range.

A switching frequency of up to 2 kHz enables a fast response time where applications demand it. The autocollimation technology incorporated in the photoelectric sensor guarantees that the sensor also reliably detects objects at close range, even when using reflective tape. It also facilitates the use of particularly small apertures.

All models feature a sensitivity adjustment control and selectable light-/dark-switching. Versatility is further enhanced by the inclusion of versions with 2 m flying leads or M8 connectors with 3 or 4 pin options. Mounting brackets and reflectors for the photoelectric sensors are included in the supply.

- Background suppression
- For long-range applications
- Light-/dark-switching selectable via rotary switch
- Adjustable sensitivity
- Red light as alignment aid
- Fast installation through integrated M3 mounting thread
