1586,9 kWh

Authorised partners are best placed to devise energy efficiency management solutions and to select the BlueNet products required, as well as providing a properly qualified support service. The BlueNet certification system ensures that users obtain an optimal consultation and sales service.

The 3 steps to optimum customer satisfaction

Certified partner

- Sales partners for end customers
- Electrical engineering and IT system vendors
- Consultants and planners

Distribution partner

- Wholesale and distribution
- Preferred sales for certified and professional partners

Professional partner

- Provides detailed technical consultancy and sales
- Data centre consultants and planners
- IT service providers

Power monitoring and display

Bachmann's BlueNet range creates optimal conditions for efficient power management. In order to monitor and control energy costs it is first necessary to know where and when they arise. The Bachmann BlueNet system provides all relevant data such as energy consumption, voltage, power and more. BlueNet monitors IT systems and clearly displays the data captured.

Capacity planning

Know what's running. By measuring individual loads, administrators can carry out effective planning for their data centre. They can then distribute loads so well that failures due to circuit overloads no longer occur.

Security

Automated notification when threshold values are reached informs the user by e-mail and SNMP before a fault can develop. Restarts controlled by web link further increase availability and flexibility.

Web-based evaluation and control

The data captured by BlueNet is evaluated centrally on a web-based system. Thus the user obtains not only an exact energy cost overview but also information on available load reserves and on possible intervention options in terms of power supply.

Save energy

For an exact analysis of power consumption in data centres, BlueNet is the ideal solution. It enables administrators to select servers for a virtualisation or for decommissioning. By performing a before/after comparison of energy consumption, savings on power costs can be included in budget planning.
