Engineering Data

Contact Specifications

Item	Specification
Specification	Slide
Material	Gold plated
Minimum applicable load (see note)	1 mA at 5 VDC

Note: Minimum applicable loads are indicated by N standard reference values. This value represents the failure rate at a 60% (λ_{60}) reliability level (JIS C5003).

The equation $\lambda_{60}=0.5 \times 10^{-6}/\text{operations}$ indicates that a failure rate of 1/2,000,000 operations can be expected at a reliability level of 60%.

Precautions

Be sure to read the precautions and information common to all Snap Action and Detection Switches, contained in the Technical User's Guide, "Snap Action Switches, Technical Information" for correct use.

■ Correct Use

Operating Object

For proper operation, follow these guidelines:

Set the dog or cam stroke so the actuator does not receive excessive force when the switch is actuated. When the actuator is released, the dog or cam must not be touching the actuator head.

Set the dog or cam so that it will press the head of the lever in the traveling direction of the lever.

Do not allow the lever to be pressed beyond the TTP, otherwise the D2X may be damaged.

Lever Load

Do not impose loads in the following directions on the lever, otherwise the Switch may be damaged or malfunction.

Microload

Be sure that the load is within the following range:

■ Wiring Connector

Use the following type CT connectors of AMP for wiring.

Press-fit connector: 173997-2
