

# MAU300 Series

## 2W, Miniature SIP, Single & Dual Output DC/DC Converters

### Key Features

- Efficiency up to 83%
- 1000VDC Isolation
- MTBF > 2,000,000 Hours
- Low Cost
- Input 5, 12 and 24VDC
- Output 3.3, 5, 12, 15,  $\pm 5$ ,  $\pm 12$  and  $\pm 15$ VDC
- Temperature Performance  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$
- UL 94V-0 Package Material
- Internal SMD Construction
- Industry Standard Pinout

Minmax's MAU300 DC/DC's are specially designed to provide higher power to 2W in a miniature SIP package.

The series consists of 21 models with input voltages of 5V, 12V and 24VDC which offers standard output voltages of 3.3V, 5V, 12V, 15V,  $\pm 5$ V,  $\pm 12$ V and  $\pm 15$ VDC for a wide choice.

The MAU300 series is an excellent selection for a variety of applications including distributed power systems, mixed analog/digital subsystems, portable test equipments, local power networks and battery backed systems.

## Absolute Maximum Ratings

| Parameter                                      |                    | Min. | Max. | Unit |
|------------------------------------------------|--------------------|------|------|------|
| Input Surge Voltage<br>(1000 mS)               | 5VDC Input Models  | -0.7 | 9    | VDC  |
|                                                | 12VDC Input Models | -0.7 | 18   | VDC  |
|                                                | 24VDC Input Models | -0.7 | 30   | VDC  |
| Lead Temperature (1.5mm from case for 10 Sec.) |                    | ---  | 260  | °C   |
| Internal Power Dissipation                     |                    | ---  | 650  | mW   |

Exceeding the absolute maximum ratings of the unit could cause damage.  
These are not continuous operating ratings.

## Notes :

1. Specifications typical at Ta=+25°C, resistive load, nominal input voltage, rated output current unless otherwise noted.
2. Ripple & Noise measurement bandwidth is 0-20 MHz.
3. These power converters require a minimum output loading to maintain specified regulation.
4. Operation under no-load conditions will not damage these modules; however, they may not meet all specifications listed.
5. All DC/DC converters should be externally fused at the front end for protection.
6. Other input and output voltage may be available, please contact factory.
7. Specifications subject to change without notice.

## Environmental Specifications

| Parameter             | Conditions          | Min. | Max. | Unit |
|-----------------------|---------------------|------|------|------|
| Operating Temperature | Ambient             | -40  | +85  | °C   |
| Operating Temperature | Case                | -40  | +90  | °C   |
| Storage Temperature   |                     | -40  | +125 | °C   |
| Humidity              |                     | ---  | 95   | %    |
| Cooling               | Free-Air Convection |      |      |      |

## Input Specifications

| Parameter                      | Model            | Min.      | Typ. | Max. | Unit |
|--------------------------------|------------------|-----------|------|------|------|

## Test Configurations

### Input Reflected-Ripple Current Test Setup

Input reflected-ripple current is measured with an inductor  $L_{in}$  (4.7uH) and  $C_{in}$  (220uF, ESR < 1.0Ω at 100 KHz) to simulate source impedance.

Capacitor  $C_{in}$ , offsets possible battery impedance.

Current ripple is measured at the input terminals of the module, measurement bandwidth is 0–500 KHz.

### Peak-to-Peak Output Noise Measurement Test

Use a  $C_{out}$  0.33uF ceramic capacitor.

Scope measurement should be made by using a BNC socket, measurement bandwidth is 0–20 MHz. Position the load between 50 mm and 75 mm from the DC/DC Converter.

## Design & Feature Considerations

### Maximum Capacitive Load

The MAU300 series has limitation of maximum connected capacitance at the output.

The power module may be operated in current limiting mode during start-up, affecting the ramp-up and the startup time.

For optimum performance we recommend 390uF maximum capacitive load for dual outputs and 470uF capacitive load for single outputs.

The maximum capacitance can be found in the data sheet.

### Input Source Impedance

The power module should be connected to a low ac-impedance input source. Highly inductive source impedances can affect the stability of the power module.

In applications where power is supplied over long lines and output loading is high, it may be necessary to use a capacitor at the input to ensure startup.

Capacitor mounted close to the power module helps ensure stability of the unit, it is comended to use a good quality low Equivalent Series Resistance (ESR < 1.0Ω at 100 KHz) capacitor of a 2.2uF for the 5V input devices, a 1.0uF for the 12V input devices and a 0.47uF for the 24V devices.

### Output Ripple Reduction

A good quality low ESR capacitor placed as close as practicable across the load will give the best ripple and noise performance.

To reduce output ripple, it is recommended to use 1.5uF capacitors at the output.

### Thermal Considerations

Many conditions affect the thermal performance of the power module, such as orientation, airflow over the module and board spacing. To avoid exceeding the maximum temperature rating of the components inside the power module, the case temperature must be kept below 90°C.

The derating curves are determined from measurements obtained in an experimental apparatus.

## Mechanical Dimensions

| Tolerance | Millimeters     | Inches            |
|-----------|-----------------|-------------------|
|           | $X.X \pm 0.25$  | $X.XX \pm 0.01$   |
|           | $X.XX \pm 0.13$ | $X.XXX \pm 0.005$ |
| Pin       | $\pm 0.05$      | $\pm 0.002$       |

The MAU300 converter is encapsulated in a low thermal resistance molding compound that has excellent resistance/electrical characteristics over a wide temperature range or in high humidity environments. The encapsulant and unit case are both rated to UL 94V-0 flammability specifications. Leads are tin plated for improved solderability.
