Engineered for life

Materials and Finishes

Shell —	In accordance with ASTM 620, 619, 568 —	Low carbon steel, plated with electro-deposited tin over cadmium over copper flash
Insulator —	Compression glass	
Contacts —	In accordance with ASTM A108 —	Steel, plated with gold over nickel

Military vs. ITT Cannon Current Ratings

The ITT Cannon rating for #20 contacts is 5 amps, which means 5 amps for all contacts simultaneously. MIL-W-5088 rates #20 contacts at 7.5 amps maximum. The explanation is as follows:

MIL-W-5088B, Paragraph 3.9.2.1.2 specifies: "Table 1 current ratings for cables in bundles are based upon 15 or more cables carrying no more than 20% of the total carrying capacity of the bundle."

Table 1 specifies a current rating of 7.5 amps maximum for single wires in bundles of 15 or more wires. NOTE: Wires and contacts are both considered to be in the category of conductors.

Explanation
If 15 wires (normally rated at 7.5 amps per wire maximum, or at least a total bundle current of 112.5 amps) are not to carry more than 20% of the total 112.5 amps, the average current rating per wire is 20% of 112.5 amps (total bundle capacity) divided by 15 (number of wires).

Conclusion
The Military rating of #20 contacts or wires is 1.5 amps average (based on 15 wires per bundle or 15 contacts per plug) vs an ITT Cannon rating of 5 amps.

Average Maximum Temperature vs Connector Size for various current ratings of mated pairs of D Subminiature connectors

- Notes:
1. Free air condition. Connectors not shielded from ambient condition in any manner.
 2. Confined condition. Connectors placed in insulated box (1 x 2 x 3.5) during test, with no moving air.
 3. Average maximum temperature stabilization: 1 hour or less in all cases.
 4. All contacts in each mated pair tested were wired in series with specified current flowing.
 5. Ambient conditions 77°F, 50% rh.

Test Data

All voltages are measured from contact to shell, in unmated condition.

Voltage Rating (ac)	Altitude (feet)			
	Sea Level	20,000	50,000	70,000
Test (Max.)	750	625	225	175

- Insulation Resistance5,000 megohms min. when tested per MIL-STD-202A, Method 302
- Contact Voltage Drop6.67 millivolts per amp max. when mated with any Original D or GOLDEN-D connector receptacle
- Air Leakage Rate1 micron cubic ft/hour max. (1.04 x 10⁻⁵ cc/sec.) at 1 atm pressure differential
- Vibration ResistanceExceeds test requirements of MIL-Ref. MIL-C-24308 STD-202, Method 204, Condition B
- Corrosion ResistanceExceeds requirements of 48 hour salt spray exposure, tested in accordance with MIL-STD-202, Method 101
- ShockExceeds tests for MIL-STD-202 Ref. MIL-C-24308 Method 213
- DWV750 VAC rms

*Add contact termination mounting, and flange type; see part number explanation.

•Dimensions B and D are measured as outside dimensions from the start of the radius corner.

Mounting Dimensions

Hermetic sealing is effective only when connectors are front panel mounted, except for brazed assemblies in which both shells are brazed to the plate. Brazed assemblies may be used for front or rear panel mounting, and each is subject to leak test. Consult other rear mounting applications.
