Notes:

1. All specifications are based on the TriQuint test circuit shown below
2. In production, devices will be tested at room temperature to a guardbanded specification to ensure electrical compliance over temperature
3. Electrical margin has been built into the design to account for the variations due to manufacturing tolerances
4. Typical values are based on average measurements at room temperature
5. All attenuation measurements are referenced to IL at center frequency
6. Variation is the total peak to peak variation over the defined frequency range
7. This is optimal impedance in order to achieve the performance shown

Test Circuit:

Actual matching values may vary due to PCB layout and parasitics
