

Commercial CCR-53 Miniature DC-26.5GHz SPDT Switch

Failsafe

The CCR-53 Switch is a broadband, SPDT, electromechanical, coaxial switch designed to switch a microwave signal from a common input to either of two outputs. The characteristic impedance is 50 Ohms. The switches are small with connector spacing compatible with SMA connectors.

The CCR-53 series switch is offered with either a failsafe or latching actuator. This design is compatible with the two most common mounting hole patterns. The CCR-53 series switch is interchangeable with a variety of switches.
