

Low Power Platform for 8-/16-bit Applications

RL78 Microcontrollers

RL78 – The True Low Power Microcontroller Platform

The RL78 Family of microcontrollers (MCUs) combines advanced low power technology, outstanding performance, and the broadest line-up in its class for the most demanding 8- and 16-bit embedded applications.

The RL78 MCUs' innovative "Snooze" mode achieves ultra-low power by allowing ADC operation and serial communication, all while the CPU is turned off. This makes the RL78 MCUs best in class for low power applications.

Why RL78?

- World's leading low power performance for equivalent MCUs in its class
- Scalability of line-up, including smart pin layout
- System cost saving features

- Wide voltage operation
- Wide temperature operation
- Built-in safety features

An extensive ecosystem and more details of RL78 can be found at www.am.renesas.com/RL78

RL78 Roadmap

RL78 Offers Multiple Power Saving Modes

- The RL78's three low power modes maximize battery life by disabling idle CPU features

Snooze Mode

- No need to wake up CPU for receiving data
- The unique Snooze Mode allows some peripherals, ADC and UART operation while in standby modes
- Achieves 90% reduction in power consumption; Snooze Mode uses 0.5mA vs. 5mA in Run mode (ADC)

Standby Modes (Halt, Stop)

- RTC with LVD in Halt or Stop Mode consumes as low as 0.57µA
- Stop Mode achieves lowest power consumption by disabling more CPU functions

RL78 Wide Operating Voltage

Power Consumption Comparison

- Leading low power in all modes

Run Mode

Halt Mode: RTC + LVD

Stop Mode: LVD

Notes:

1: At 32MHz (NOP instructions)

2: 0.49µA (RTC only)

3: 0.23µA (all stopped, RAM retained) & LVD only 0.08µA

Compatibility

RL78 MCUs Offer Full Pin Compatibility

- I/O and peripheral pins scale up
- Easily add I/O and functionality by migrating to a larger pin count
- Keep peripheral pin PCB layout in the same order/position as pin count is increased
- Software code can be reused across the full RL78 family from 20 pins to 128 pins

Scalability

RL78 Offers an Unprecedented Line-up

- Over 300 devices
- Available in 20- to 128-pin packages and 2KB to 512KB Flash

Flexibility

Peripheral I/O Redirection (PIOR) Capability Remaps Functions to Alternate Ports

- Optimize peripheral pin functionality by easing function bottlenecks on a pin
- Maximize usable peripheral set by remapping the physical pin's connectivity to a chosen peripheral

PIOR capability can help ease a bottleneck, as shown in this example, by remapping to alternate pins

High Efficiency

RL78/G14 Offers up to 44DMIPS Performance at 32MHz

- Unrivalled power consumption/performance ratio (1/3 that of competitors)
- Higher DMIPS rating and lower power consumption than a popular 32-bit competitor technology
- 85% instructions executed in one clock cycle

Advanced Features

Event Link Controller (ELC)*

- Improves real time function and reduces program size by eliminating interrupt processing
- Supports up to 26 event signals, including external and internal interrupts
- CPU-independent operation enables lower power consumption

Specialized Motor Timers*

- 16-bit and up to 64MHz operation
- Supports 5 operating modes including 6-channel complementary PWM
- Programmable 16-bit dead-time control
- Selectable buffer operation for fast timer reload
- Shut-off function for over current detection

* RL78/G14
