

### Description

- Compact footprint for high density, high current/low voltage applications
- Foil technology that adds higher reliability factor over the traditional magnet wire used for higher frequency circuit designs
- Frequency Range up to 1MHz

### Applications

- Next generation microprocessors
- Energy storage applications
- DC-DC converters
- Computers

### Environmental Data

- Storage temperature range: -40°C to +125°C
- Operating ambient temperature range: -40°C to +85°C (range is application specific).
- Solder reflow temperature: +260°C for 10 seconds maximum

### Packaging

- 45 parts per tray bulk packaging.
- Tape and reel packaging also available, 44mm width, 110 parts per 13" reel.
- Add -TR after part number for tape and reel packaging.

1) Open Circuit Inductance Test Parameters: 300kHz, 0.250 Vrms, 0.0 Adc  
 2) DC current for an approximate temperature change of 40°C without core loss.  
 Derating is necessary for AC currents.  
 PCB layout, trace thickness and width, air-flow and proximity of other heat generating components will affect the temperature rise.  
 It is recommended that the temperature of the part not exceed 125°C under worst case operating conditions verified in the end application.

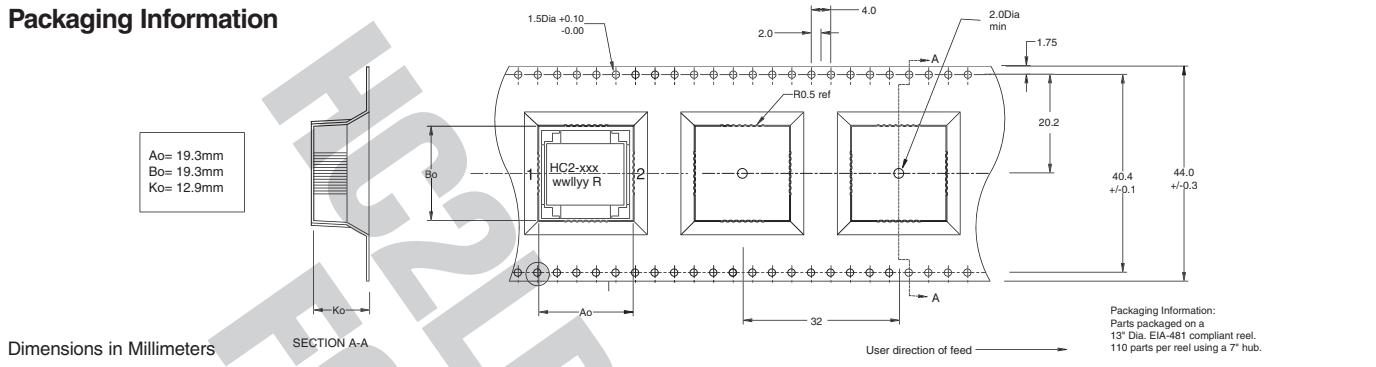

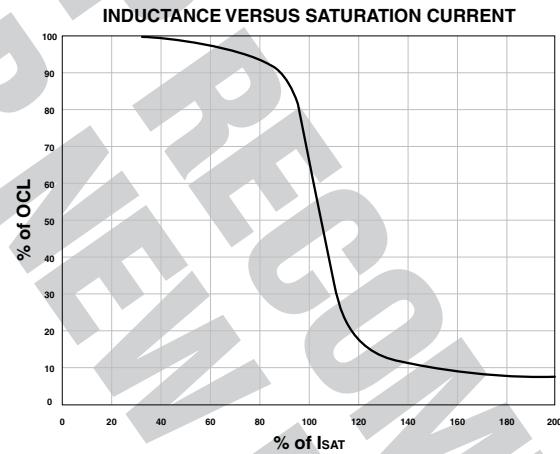

3) Peak current for approximately 30% roll-off

4) Values @ 20°C

5) Applied Volt-Time product (V- $\mu$ S) across the inductor. This value represents the applied V- $\mu$ S at 300KHz necessary to generate a core loss equal to 10% of the total losses for 40°C temperature rise.
