Data Sheet

GEMboard™

Display Controller Board for Tianma Displays

Introduction:

The CB-TA-TM043NBH02 and CB-TA-TM047NBH01 are fully integrated controller boards that support the Tianma 4.3" and 4.7" 480x272 TFT displays. These controller boards feature the GEM Graphical OS Chip™ for color displays. Using Amulet's GUI design tool, GEMstudio™ user interface design tool, user interfaces can be quickly and easily developed to support a variety of embedded applications. These boards can drive 24-bit color, plus 8-bit alpha blending (transparency channel) to drive graphics found in high-end consumer electronic products.

Features:

- Amulet GEM Graphical OS Chip™
- 24-pin Interconnector
- Royalty-Free Graphical Operating System
- On-Board memory - 32-megabit dataflash or storing GUI pages
- Touch Panel Controller built into the GEM Graphical OS Chip™

Notes:

Communication and Program UARTs can be used for programming as well as for communication with the application's host processor.

If you wish to program via UART make sure you can get to the Reset and the Program Mode pins. These will only be needed if a serious programming issue occurs.

Pass-through programming information is available at our website under Field Update Utilities: <http://www.amulettechnologies.com/support/downloads/fieldupdates.html>.

Momentarily grounding reset with an open collector device or momentary switch will cause a reset. Reset must be applied after the Program Mode pin is changed for us to see it.
