

BT883 PROJECTOR CEILING MOUNT

This mount is designed for LCD and DLP projectors with a weight up to 10Kg when there is a need to mount the projector on the ceiling. The BT883 has a variable drop, ranging from 750mm to 1222mm which can be adjusted by simply loosening the lever and then tightening.

There is a tilt facility provided at the ceiling which allows this mount to be used on angled / cathedral ceilings. There is also full 360 degree swivel and up to 90 degree tilt. A sleek cover plate hides the fixing screws from view whilst a strong safety wire is included as standard for extra security. Cables can be routed through the inside of the tube to give a more attractive appearance (lower section 35mm dia, upper 42mm).

B-Tech has designed a unique, ultra flexible carousel mounting system that is designed to fit virtually all LCD and DLP projectors. This mount includes 4 long arms and 4 short arms that branch out from the carousel disc giving a maximum distance between any two projector mounting points of 340mm.

Any combination of arms can be used and the supplied hardware kit includes M3, M4, M5 and M6 fixing screws plus metal spacers for uneven mounting surfaces or recessed holes on the projectors. By having the arms raised, this allows for open-air circulation giving a longer projector bulb life. The arms can be adjusted by using the thumbwheels and this allows the possibility of replacing bulbs without the need of taking down the projector.

- **Designed for LCD / DLP projectors with a weight up to 10Kg**
- **Variable drop - 750mm to 1222 mm**
- **360° swivel, 90° tilt**
- **Safety wire for extra security**
- **Coverplates included to hide mounting screws**
- **Available in Silver**
- **GS/TUV certified**
