Introduction

About Vishay Intertechnology

Vishay was founded in 1962 to manufacture and market foil resistors, an invention of physicist Dr. Felix Zandman, Chairman of the Board and founder. The Company began operations with foil resistors and strain gages as its initial product offerings. In 1985, having grown from a start-up into the world's leading manufacturer of these original products, Vishay began an ongoing series of strategic acquisitions to broaden its product portfolio.

Broad-Line Manufacturer, Global Presence

Today, Vishay is a broad-line manufacturer with a global presence. It is one of the world's largest manufacturers of discrete semiconductors and passive electronic components. Vishay's acquisitions include the infrared component business of Infineon and such top names as Siliconix, Dale, Draloric, Sprague, Vitramon, and BCcomponents (the former passive components business of Philips Electronics and Beyschlag).

Innovations in Technology

Over the years, Vishay's R&D efforts have led to a steady stream of technological breakthroughs and innovative products. These include packageless power MOSFETs, the industry's first silicon-based RF capacitors, dc-to-dc converter modules with all the active and passive components required for a complete power conversion solution, high-current IHLF inductors, Power Metal Strip[®] resistors, and many more.

Leading Industry Rankings

Vishay's global footprint includes manufacturing facilities in China and other Asian countries, Israel, Europe, and the Americas, as well as sales offices around the world. Vishay has market shares ranging from substantial to number-one for each of its products.

Discrete Semiconductors

Number 1 worldwide in low-voltage power MOSFETs
Number 1 worldwide in rectifiers
Number 1 worldwide in glass diodes
Number 1 worldwide in infrared components
...and others

Passive Components

Number 1 worldwide in wirewound and other power resistors
Number 1 worldwide in foil, MELF, thin film, and current sense resistors
Number 1 worldwide in wet tantalum capacitors
Number 1 worldwide in strain gage sensors and load cells
...and others

"One-Stop Shop" Service

With Vishay's "one-stop shop" service, customers can send their bills of materials (BOMs) to Vishay and ask the Company to cross-reference Vishay products in all categories. This enables customers to order multiple components from one source—Vishay. In addition, Vishay's product sample service for design engineers provides free product samples worldwide. Quick turnaround time and a complete range of Vishay samples enable customers to rely on Vishay for discrete electronic component solutions. For more information about Vishay samples, please visit us on the Web at www.vishay.com or contact a local Vishay sales representative or office.

Components for Computers and Peripherals

In recent years, personal computers have evolved into a basic household and business utility. In a growing number of markets it is not uncommon for each and every member of a household, and every professional employee of a company, to be armed with one or two personal computers. Connectivity with communications devices has made desktop and notebook PCs a baseline point of data storage for all aspects of life from personal finance to personal entertainment. Even for individuals who don't own a computer, access to a PC is now available through internet cafes in nearly every corner of the world.

As a supplier that has grown alongside the computing industry for more than 40 years, Vishay has an exceptional grasp of the demands of this business and a global orientation that reflects its multinational organization. Creativity in the computer industry and its implementation in new products takes place at multiple points and levels. Vishay is adept at working with all of these, including OEMs, ODMs, and suppliers of motherboards, graphics cards, hard disk drives, modems, PC cards, printers, and a host of other peripherals.

As the computer industry has evolved, so has the way in which servers, PCs, and notebook computers are used. On top of all their traditional functions, computers have become hubs of communication and digital entertainment. The ever-increasing need to quickly transmit, download, and process graphic, video, and audio files is constantly putting new demands on microprocessors and on all the components that support and power them, including the passive and semiconductor devices manufactured by Vishay.

The faster processor speeds necessitated by these applications result in higher current levels and more heat, both of which need to be managed in form factors where space is at a premium. With each new generation of microprocessors bringing new requirements for power management, Vishay has remained ahead of the curve with a range of products designed specifically for this application, including Power Metal Strip® resistors, TrenchFET® power MOSFETs and power ICs, Trench MOS Barrier Schottky (TMBS™) rectifiers, and low-profile inductors designed to handle higher currents more efficiently.

Advancements in both silicon and packaging technology keep Vishay power semiconductor products at the forefront of solutions designed to cope with higher levels of current and heat in smaller spaces. For example, with WFET® power MOSFETs, Vishay uses a thicker gate oxide at the bottom of the silicon trench to bring about a dramatic improvement in switching performance at high frequencies, enabling the design of more efficient power conversion circuits. Thermally enhanced packages such as PowerPAK® and PolarPAK® add to these silicon capabilities by dissipating heat more efficiently in a given footprint area.

For applications such as power adapters for desktop and notebook PCs, Vishay's Trench MOS Barrier Schottky rectifiers are a superior alternative to planar Schottky devices, matching the efficiency and thermal performance of synchronous rectification solutions and decreasing the number of parts required to accomplish the same functions. Advanced package options for Schottky, standard, and ultrafast rectifiers such as the SMP set a new standard for rectifier current density while delivering industry-record levels of thermal resistance.

Vishay components can be found in nearly every PC subsystem from the monitor to the mouse, including optocouplers that protect against electrical shock in power adapters and optical sensors that enable trackball controls. Many Vishay products have multiple applications in PCs and notebooks. For example, our current sense resistors are used in applications as diverse as disk drive motor control, graphics cards, and PCMCIA cards. Vishay's industry-leading LED products give designers a broad range of color and brightness options for indicators and include white LED devices for display backlighting.

Vishay provides a number of components optimized for mobile computing systems, the most dynamic and fastest growing segment of the computer market. Our IHLP line of inductors provides current ratings up to 60 A, footprint areas as small as 6.5 mm², and height profiles as low as 1.8 mm. The low on-resistance of Vishay's power MOSFET products promotes battery efficiency while reducing the need for heat sinks, while highly accurate Power Metal Strip current sensing resistors help monitor battery life and power usage.

Components for Computers and Peripherals

Vishay responds to the need to conserve space with products such as surface-mount, low-ESR tantalum and low-inductance multilayer ceramic capacitors, high-frequency monolithic inductors, and disk drive motor control ICs that handle both head positioning and voice coil motors with a single package. Vishay chip resistor arrays combine the functions of many individual resistor chips into a single network to simplify board layout and reduce placement costs in both computer and peripheral applications. Pull up/pull down logic circuits, memory modules, and bus line terminations are common applications for chip array components. High levels of integration are also delivered by Vishay power ICs that combine such functions as power conversion or disk drive motion control on a single chip. FunctionPAK® products take integration even further by delivering a complete dc-to-dc converter or current control module in a single BGA package.

As circuit boards become more tightly packed and shrinking form factors bring components closer to the outside world, controlling EMI and RFI becomes increasingly important. For RFI suppression in switching power supplies, Vishay offers X and Y capacitors built on film and ceramic technologies for both computers and peripherals. Our line of custom magnetic products includes both surface-mount and through-hole common mode chokes to meet filtering needs. A complete line of RFI and safety capacitors can be configured to meet the needs of any testing agency worldwide.

Advances in portability increases the need for interconnections, and this is where Vishay provides the latest infrared data technology to eliminate traditional cable connectors. Vishay's IrDA-compliant transceivers set the pace for IR connectivity applications with data transmission rates up to 4 megabits per second, operating voltages as low as 2.4 V, and height profiles as low as 1.6 mm above the printed circuit board, providing users with a fast, efficient, and reliable alternative to cables between portable computers and cell phones, digital cameras, and many other categories of IR-enabled systems.

In an industry driven by rapid change and extreme competitiveness, Vishay offers a unique blend of passive and discrete electronic component solutions designed and developed for the industry. This means that engineers and purchasing can go to one source for the design, procurement, and supply of the ideal components for their applications.

Copy Machines	Diodes	
	Small Signal Switching and Schottky	BAS, BAV, BAW, BAL99, BAY80, 1N41xx, LL, LS, MCL
	Zener	1N4728A-4761A, BZT03, BZW03, AZ23, DZ23, BZX55, BZX84, BZX85
	Rectifiers	
	Standard	1N4007GP
	Fast and Ultrafast	UG2D, UG4D, 31GF6, UG8DT, FES8GT
	Schottky	SS14, SSA34, SS2P4, SB540, MBR20100CT
	Bridge	G2SBA60, GBL06, GBU4J, GBU6J, GSIB660, GBU8J
	TVS	TPSMP, P6KE200A
	Transistors	
	Power MOSFETs and Small-Signal MOSFETs	Si3xxx, Si4xxx
	Optoelectronics	
	LEDs / LED Displays	TLMx3100
	Photo Detectors and IR Emitters	TCYS5201, TCYS6201, Custom
	Optocouplers	LH1546, LH1556, LH1510, V041xx, V042xx, V0306x
	IrDA Transceivers	TFDU4100, TFDU6102
	Analog Switches / Multiplexers	
		DG23xx, DG3516, DG3537, DG2515/16
	Resistors	
	Thin Film	TNPW, V, Networks
	Wirewound	CP, RH, RS, Z302, ZDA, KKA, WSL, WSR, WSC, WSE, WSLE, WSH, WSZ
	Film	D/CRCW, CR, CMF, RNX, TD/TR, FHV, ROX, PR, VR, MB
	Thermistors	NTHS, A, 1C, 1M
	Capacitors	
	Film	192P, F1772, MKP1840, MKP1841, F1778, F1710, F1740, F1773
	Tantalum	173D, 199D, 293D, 595D
	Ceramic	30GAT, 440L, 30LVG, WYO, NPO, X7R
	MLCC	VJ0603, VJ0805, VJ1206, VJ1210
	Magnetics / Inductors	
	Wirewound	IHLP, IHSM, LPT, IDC, IDCS, IDCP, IMC, ICM
	Multilayer	ILB, ILBB, ILSB
	Transformers	LPE, LPT, Custom
	Transducers	
	Conductive Plastic	Custom design for motion transducers and angle sensors

Li-Ion Battery Pack

Application	Series/Part Number	
Li-Ion Battery Pack	Resistors	
	Wirewound	WSL, WSR, WSH, WSE, WSLE

Notes

SEMICONDUCTORS:

Rectifiers • Small-Signal Diodes • Zener and Suppressor Diodes • MOSFETs
• RF Transistors • Optoelectronics • ICs

PASSIVE COMPONENTS:

Resistive Products • Magnetics • Capacitors • Strain Gages and Strain Gages Instruments
• PhotoStress® Instruments • Transducers

One of the World's Largest Manufacturers of Discrete Semiconductors and Passive Components
