Description

The HSMx-C130 ChipLEDs are designed specially for the membrane switch application. The request is to have as low as possible while retaining the footprint at the optimal size of a 0603 (1.6 x 0.8 mm) device. Apart from the membrane switch application, the HSMx-C130 is also suitable for use in applications where low height is required.

These chip-type LEDs utilize Aluminum Indium Gallium Phosphide (AlInGaP) material technology. The AlInGaP material has a very high luminous efficiency, capable of producing high light output over a wide range of drive currents.

Four different colors are available: amber, red, green, and orange. All parts are intensity binned and color binned (except for red color). They come in 8 mm conductive tape on a 7 inch diameter reel with 4000 units per reel which make them compatible for automatic placement.

Features

- High brightness AlInGaP material
- Small size with extremely low profile
- 0603 industry standard footprint with 0.35mm height
- Diffused optics
- Operating range of -40°C to 85°C
- Available in 4 colors

Notes:

1. The luminous intensity I_V is measured at the peak of the spatial radiation pattern which may not be aligned with the mechanical axis of the LED package.
2. The dominant wavelength, λ_d are derived from the CIE Chromaticity Diagram and represents the perceived color of the device.
3. λ_{1/2} is the off-axis angle where the luminous intensity is ½ the peak intensity.
