

Vector Modulator, 1.94 to 2.34 GHz

MAMDCC0006
V5

Features

- Operation Bands 1.90 to 2.02 GHz & 1.94 to 2.34 GHz
- Chip Scale Package.
- Low Amplitude Ripple
- Linear Phase
- 50 ohm nominal impedance
- Continuously Variable Across a Full 360 degree range
- Test Boards to be Available

Description

M/A-COM's MAMDCC0006 is a Vector Modulator that significantly reduces the required board space compared to hybrid solutions. The monolithic passive elements will lead to greater repeatability lot-to-lot. Low amplitude ripple will provide superior performance. High intercept and compression points will contribute to more linear system performance. MAMDCC0006 is ideally suited for wireless infrastructure applications. M/A-COM's MADRCC0002 Dual Linearizer is designed to simplify the control of Vector Modulators. See Figure 1 and App Note AN3001.

Pad Configuration

Pin #	Function	Pin #	Function
1	NC	17	NC
2	NC	18	NC
3	NC	19	NC
4	NC	20	NC
5	NC	21	NC
6	NC	22	NC
7	NC	23	NC
8	NC	24	Bias 2B
9	Bias 1A	25	NC
10	NC	26	GND
11	GND	27	RF OUT
12	RF IN	28	GND
13	GND	29	NC
14	NC	30	Bias 1B
15	Bias 2A	31	NC
16	NC	32	NC

CSP-6

Absolute Maximum Ratings ³

Parameter	Absolute Maximum
Max. Input Power 1.5 to 2.0 GHz Other Frequencies	+34 dBm +24 dBm
DC Voltages ⁴ Vbias1 or Vbias2	+1.0V
DC Current	50 mA Max per Bias
Operating Temperature	-40°C to +85°C
Storage Temperature	-65°C to +125°C

3. Exceeding any one or combination of these limits may cause permanent damage to this device.

4. Note that external dropping resistors are required to limit the current and voltage on the PIN diodes.

Recommended PCB Layout

Vector Modulator, 1.94 to 2.34 GHz

**MAMDCC0006
V5**

Figure 1A - Phase and Attenuation of MAMDCC0006, Vector Modulator Linearized with MADRCC0006 Linearizer

Figure 1B

5. Tic marks on x,y axes refer to reflection coefficient in increments of 0.1V. Reflection coefficients vary from -0.5 to +0.5 on both the x and y axes.
6. Data is for vector modulators driven by linearizers per attached schematic.
7. Inputs to the linearizers vary from 0 to 5V.
8. The phase with the inputs to both linearizers set to +5V is arbitrarily called zero degrees.

Figure 2A - Phase and Attenuation of MAMDCC0006 vs. Bias Current

Figure 2B

9. Tic marks on x,y axes refer to reflection coefficient in increments of 0.1. Reflection coefficients vary from -0.6 to +0.6 on both the x and y axes.

10. The phase with the inputs to both linearizers set to +15mA is arbitrarily called zero degrees.
