Blank hubs

User-adaptable for special needs, e.g. fitting within tubes. Blank hubs are supplied centred with no provision for fastening. External dimensions identical with blind hubs.

Standard discs (larger sizes are webbed)

- Acetal – High torsional stiffness, good bearing properties, long backlash-free life.
- Nylon 11 – Resilient, isolates noise & vibration. Performance approximately 25% that of acetal disc.

Thro' bored discs

Thro' bored discs allow shafts to near-butt, standard thro' hole diameter = $\text{ØD} \times 0.5$. To order, add suffix 'T' to order code, eg., **236.25T**

Other thro' hole diameters are manufactured to order. Specify the disc ref. and thro' hole diameter. This should equal the larger shaft diameter + 2 x max radial error.

Note that thro' bored discs reduce torsional stiffness.

HOW TO ORDER

Combine the HUB REF in the Main Table with the BORE REF in the Standard Bores Table, e.g.

452H25.28

Hub ref.

Bore ref.

Order discs separately from the Main Table, e.g.

236.25

Disc ref.

ORDER 2 HUBS + 1 DISC PER COUPLER

HOW TO INSTALL

Correct installation is important for optimum operation. See page 18 for details.

Materials & Finishes

Hub sizes 06 to 13:

Brass BS 2874 CZ121
Chromate & passivate finish

Hub sizes 19 to 57:

Al. Alloy 2011T3 and 2011T8
BS 4300/5 FC1

Fasteners:

Alloy steel, black oiled

Blind & blank hubs:

Alocrom finish

Thro' hubs:

Clear anodised finish

Torque discs:

Types 236 - Acetal (black)
Types 238 - Nylon 11 (natural)

Temperature Range

-20°C to +60°C

1. **Blind hubs:** Length of parallel bore ± 0.2 . Bores may terminate in 118° incl. angle.

Thro' hubs: Max permissible hub penetration.

2. **Blind hubs:** Nominal distance between unchamfered shafts bottomed out to L1.

Thro' hubs: Nominal distance between shafts with standard (unbored) disc.

3. Maximum recommended tightening torque (see also next page under 'Clamp hubs')

4. Values apply to complete couplers with max bores.

5. **Peak torque.** Select a size where Peak Torque exceeds the application torque x service factor.

6. Couplers can provide up to $\pm (\text{ØD} \times 0.1)$ radial compensation in extreme cases.

Observe given values for maximum backlash-free life.

Axial compensation is set on installation. See next page for details.

Electrical isolation between shafts > 3kV.

7. Values apply at 50% peak torque with no misalignment, measured shaft-to-shaft with largest standard bores.

8. Thro' hubs can be provided with keyways or 'D' bores. See page 4 for details.
