

M57140-01

IPM POWER SUPPLY HYBRID IC

**Description:**

M57140-01 is an isolated DC-to-DC converter designed to drive IPMs (Intelligent Power Modules). With an input of DC 20V, the module supplies four 15V outputs. Isolation is provided from primary to secondary and also between the secondaries. Interwinding isolation is designed for driving the IPM.

Features:

- ☐ Output Specification:
+15V x 4, Total 3W max.
- ☐ Primary-to-secondary Isolation:
2500 V_{RMS}, One Minute
- ☐ Secondary-to-secondary Isolation Voltage:
1500 V_{RMS}, One Minute
- ☐ Compact, Low Profile Design

Applications:

- ☐ IPMs for General Purpose Inverter and AC Servo
- ☐ Power Source for MOSFET Driving Circuits

Ordering Information:

M57140-01

Application Circuit

- When M57140-01 is used under excessive load condition, output side rectifying diodes will be destroyed. Care should be exercised so as not to operate the device above the rated maximum load current.
- Coating Materials should not be applied on this device because the application of coating materials for waterproofing could cause a stress and destroy a device.
