

2/2-Way; G 1/8" – G 3/8"; PN up to 25 bar

Advantages/Benefits

- ▶ Coil can easily be changed with valve in place
- ▶ Coil lockable in 4 x 90° positions or freely movable in between, as required
- ▶ Medium is only in contact with the valve internals and the body
- ▶ High-quality seal material FPM (Viton) as standard
- ▶ High temperature option

Design/Function

The 6013 valves are based on a modular concept comprising three basic elements: Valve body, push-over coil and standard cable plug. The valve assembly consists of a body to which the armature guide tube containing the plunger, seals and springs is attached. The coil is pushed over the guide tube and thus isolated from the medium.

The medium is only in contact with the valve internals and body.

A wide selection of port and orifice sizes is offered. The valve body material is brass and stainless steel. All valves have high quality viton (FPM) seals as standard.

To simplify ordering, a wide selection of standard combinations of valve body, push over coil and standard cable plug can be ordered with one order number.

Cable plug options of Type 2508 are available to suit special electrical application requirements.

- The modular concept provides flexibility to meet application requirements.
- The valves are interchangeable with Type 211.
