1 Overview

Features

- CAN data transmission rates from 1 kBaud up to 1 MBaud
- Receive - Only Mode and Stand - By Mode
- Optimized Electromagnetic Compatibility (EMC)
- Optimized for a high immunity against Electromagnetic Interference (EMI)
- Bus pins are short circuit proof
- Over - temperature protection
- Very wide temperature range (-40 °C up to 125 °C)
- Green Product (RoHS compliant)

PG-DSO-8

Description

The IFX1050G is optimized for high speed differential mode data transmission in industrial applications and it is compliant to ISO11898-2. The transceiver IFX1050G works as an interface between the CAN protocol controller and the physical differential bus in High Speed CAN applications. It supports data transmission rates from 1 kBaud up to 1 MBaud.

The IFX1050G has three different operation modes:

The Normal Mode, the Receive - Only Mode and the Stand - By Mode. The mode selection is controlled by the logical input pins RM and INH.

The IC is based on the **Smart Power Technology SPT®** which allows bipolar and CMOS control circuitry in accordance with DMOS power devices existing on the same monolithic circuit. The IFX1050G is designed to withstand the severe conditions in industrial applications and provides excellent EMC performance within a broad frequency range.

3.2 Pin Definitions and Functions

Pin	Symbol	Function
1	TxD	CAN transmit data input; 20 kΩ pull - up, "LOW" in dominant state
2	GND	Ground
3	V _{CC}	5 V Supply input
4	RxD	CAN receive data output; "LOW" in dominant state, integrated pull - up
5	RM	Receive - Only input; control input, integrated 20 kΩ pull - up, "LOW" to activate Receive - Only Mode
6	CANL	Low line I/O; "LOW" in dominant state
7	CANH	High line I/O; "HIGH" in dominant state
8	INH	Inhibit Input; control input, 20 kΩ pull - up, "LOW" to activate Normal Mode

4 Operation Modes

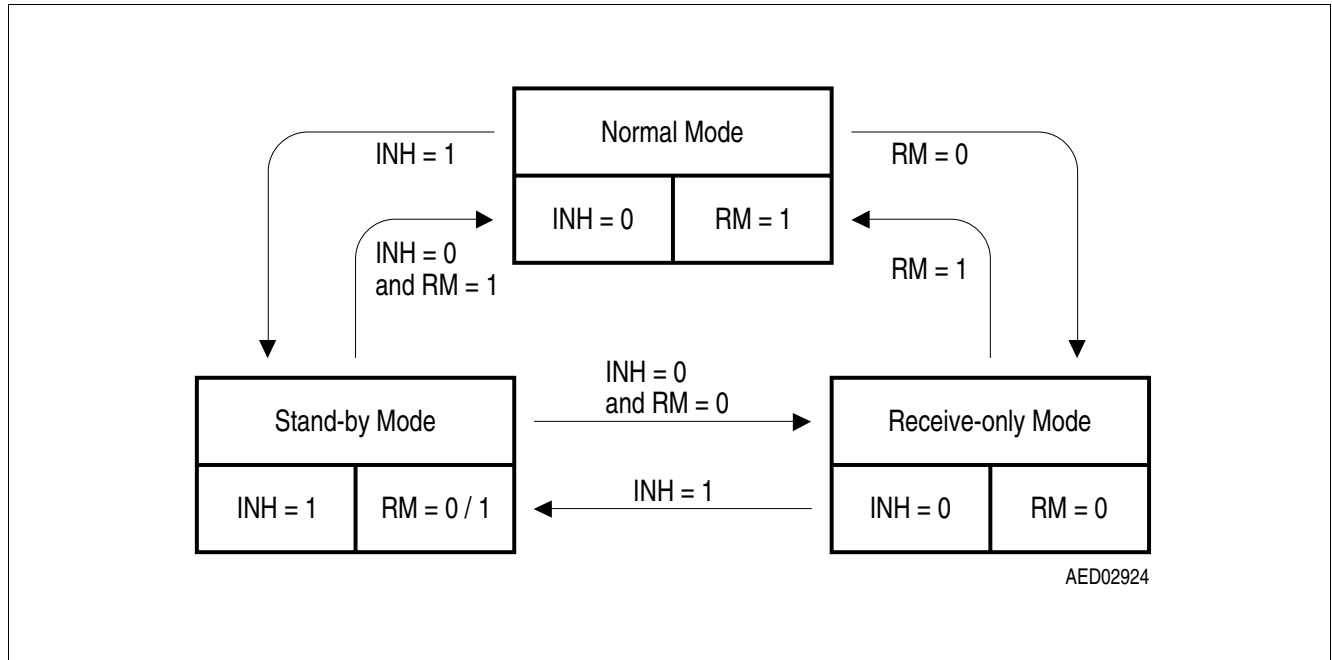

Figure 3 Mode State Diagram

The IFX1050G is equipped with three different operation modes.

4.1 Normal Mode

In the Normal Mode the device is able to receive data from the CAN bus and to transmit messages to the CAN bus. The IFX1050G enters Normal Mode by setting the INH input to logical “LOW” and the RM input to logical “HIGH” (see [Figure 3](#)).

4.2 Stand - By Mode

Stand - By Mode is a Low - Power mode with reduced current consumption on the power supply V_{CC} .

In Stand - By Mode the receiver and the transceiver of the IFX1050G are disabled and the device can not receive any data from the CAN bus, nor transmit any data to the CAN bus. The IFX1050G enters Stand - By Mode by setting the INH input to logical “HIGH” (see [Figure 3](#)).

When the Stand - By mode is not used the INH pin has to be connected to GND in order to switch the IFX1050G permanently into Normal Mode.

4.3 Receive - Only Mode

The Receive - Only Mode can be used for diagnostic purposes (to check the bus connections between the nodes) as well as to prevent the bus being blocked by a faulty permanent dominant TxD input signal. In Receive - Only Mode the output stage of the transceiver IFX1050G is disabled. The IFX1050G can not send any data to the CAN bus, but is still able to receive data from the CAN bus. The IFX1050G enters Receive - Only Mode by setting the RM input and the INH input to logical “LOW” (see [Figure 3](#)).

In case the Receive - Only Mode is not used, the RM pin can be left open or it can be also connected to the power supply V_{CC} .

5 Electrical Characteristics

5.1 Absolute Maximum Ratings

Table 1 Absolute Maximum Ratings

Parameter	Symbol	Limit Values		Unit	Remarks
		Min.	Max.		
Voltages					
Supply voltage	V_{CC}	-0.3	6.5	V	–
CAN input voltage (CANH, CANL)	$V_{CANH/L}$	-40	40	V	–
Logic voltages at INH, RM, TxD, RxD	V_I	-0.3	V_{CC}	V	0 V < V_{CC} < 5.5 V
Electrostatic discharge voltage at CANH, CANL	V_{ESD}	-6	6	kV	human body model (100 pF via 1.5 kΩ)
Electrostatic discharge voltage	V_{ESD}	-2	2	kV	human body model (100 pF via 1.5 kΩ)
Temperatures					
Junction temperature	T_i	-40	160	°C	–

Note: Stresses above the ones listed here may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Note: Integrated protection functions are designed to prevent IC destruction under fault conditions described in the data sheet. Fault conditions are considered as “outside” normal operating range. Protection functions are not designed for continuous repetitive operation.

5.2 Functional Range

Table 2 Functional Range

Parameter	Symbol	Limit Values		Unit	Remarks
		Min.	Max.		
Supply voltage	V_{CC}	4.5	5.5	V	–
Junction temperature	T_j	-40	125	°C	–
Thermal Shutdown (junction temperature)					
Thermal shutdown temperature	T_{jSD}	160	200	°C	10 °C hysteresis

Note: Within the functional or operating range, the IC operates as described in the circuit description. The electrical characteristics are specified within the conditions given in the Electrical Characteristics table.

5.3 Thermal Resistance

Pos.	Parameter	Symbol	Limit Values			Unit	Conditions
			Min.	Typ.	Max.		
5.3.1	Junction to Ambient ¹⁾	R_{thJA}	–	–	185	K/W	

1) Not subject to production test, specified by design.

Green Product (RoHS compliant)

To meet the world-wide customer requirements for environmentally friendly products and to be compliant with government regulations the device is available as a green product. Green products are RoHS-Compliant (i.e. Pb-free finish on leads and suitable for Pb-free soldering according to IPC/JEDEC J-STD-020).
