

Description

Hall effect type current sensor with a single digital output factory programmed to go low when a given current threshold is exceeded. The TD Series is able to operate within a temperature range of -40° C to 125° C and has a fast response time of 1µs (typical). The miniature package size allows the TD series to be mounted on printed circuit boards and is integrated with an open collector digital output which is ideal for interfacing to control circuitry.

Typical Applications

Welding equipment, servo drives, treadmills, automotive power conversion, power supplies, home audio, MRI equipment

Technical Data

Absolute Maximum Ratings

Supply Voltage	-1.0 to +25 VDC
Voltage Externally Applied to Output	+25 VDC max (Output high, current below I_{trip}) -0.5 VDC min (Output high or low)
Output ON current (sink)	50 mA
Operating Temp Range	-40° C to +125° C
Sensed Current	+/- 500 Amp peak
RMS voltage for AC isolation test, 50/60 Hz, 1 minute	2.5 kVac

Absolute maximum ratings are the extreme limits that the detector will withstand without damage. Electrical operation and characteristics are not guaranteed as the maximum limits are approached. Proper application of the detector must ensure that the detector operates within the operating characteristics below.

Operating Characteristics

	Symbol	Min	Typ.	Max	Notes
Supply Voltage	V_s	3.8		24.0	VDC
Supply Current	I_s			10.0	mA
Operating Temperature	I_s	-40		125	°C
Output Trip Time	T_{trip}		1.0	2.5	µS, $di/dt = I_{trip}/\mu S$
Output ON Voltage	V_{os}		0.15	0.40	VDC sinking 20 mA
Output ON Current	I_{os}			20	mA

Note 1: Detector sensitive to unidirectional current as defined in mechanical dimension drawing
