### Description

**DSL04** is designed to protect VDSL2 line drivers against surges defined in worldwide telecommunication standards. This device protects line drivers in CPE and DSLAM applications. The low capacitance makes it suitable from ADSL to VDSL2 data rates.

Middle points (-VLD, +VLD) can be either connected or not depending on application requirements.

**DSL04** is able to survive severe conditions even when used with downgraded or oscillating gas tube.

This device is packaged in a SOT23-6L.
