

General-purpose low voltage comparators

Datasheet - production data

Applications

- Mobile phones
- Notebooks and PDAs
- Battery supplied electronics
- General-purpose portable devices
- General-purpose low voltage applications

Description

The LMV331, LMV393 and LMV339 are the single/dual/quad and low voltage versions of the industry standard LM339 and LM393. They can operate with a supply voltage ranging from 2.7 to 5 V, and exhibit a lower current consumption than their predecessors LM339 and LM393. These devices are a perfect choice for low-voltage applications.

The LMV3xx are available in tiny packages, making them ideal for applications where space saving is a constraint.

The devices are designed to operate in the temperature range of -40°C to +125°C and are suitable for a variety of applications.

Features

- Supply operation from 2.7 to 5 V
- Low current consumption: 20 μ A
- Input common mode range includes ground
- Wide temperature range: -40°C to +125°C
- Low output saturation voltage
- Propagation delay: 200 ns
- Open drain output
- ESD tolerance: 2 kV HBM / 200 V MM
- SMD packages

1. All voltage values, except the differential voltage, are referenced to V_{CC-} .
2. Short-circuits can cause excessive heating. These values are typical.
3. Human body model: a 100 pF capacitor is charged to the specified voltage, then discharged through a 1.5 k Ω resistor between two pins of the device. This is done for all couples of connected pin combinations while the other pins are floating.
4. Machine model: a 200 pF capacitor is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 Ω). This is done for all couples of connected pin combinations while the other pins are floating.
5. Charged device model: all pins and package are charged together to the specified voltage and then discharged directly to ground through only one pin. This is done for all pins.

Date	Revision	Changes
08-Dec-2009	1	Initial release.
03-May-2010	2	Corrected Icc unit in Figure 2 and Figure 3.
12-Dec-2011	3	– Added LMV393 and LMV339 devices to the datasheet. – Added V_{out} parameter in Table 1: Absolute maximum ratings. – Removed note "<i>The magnitude of input and output voltages must never exceed the supply rail ± 0.3 V.</i>" from Table 1.
24-Jan-2024	4	Updated max value ambient temperature from +85°C to +125°C.
