

BIPOLAR ANALOG INTEGRATED CIRCUITS

μ PC7800A SERIES

THREE TERMINAL POSITIVE VOLTAGE REGULATORS

DESCRIPTION

μ PC7800A series are monolithic three terminal positive regulators which employ internally current limiting, thermal shut down, output transistor safe operating area protection make them essentially indestructible.

They are improved for ripple rejection ratio, line regulation, load regulation and quiescent current, as comparison of conventional μ PC7800 series.

FEATURES

- Wide operation temperature range.
- High ripple rejection ratio.
- Good regulation (line, load).
- Low quiescent current.
- Built-in protection circuits.
(over current protection, SOA protection and thermal shut down)
