SQFlash 2.5" SATA-SSD

## 1. Overview

Advantech SQFlash 2.5" SATA-SSD (Solid State Drive) delivers all the advantages of Flash Disk technology with the Serial ATA II interface, fully compliant with standard 2.5-inch form factor. The SATA SSD is based on a standard SATA 7-pin interface for data segment and 15-pin for power segment, designed to operate at a maximum operating frequency of 150MHz with 30MHz external crystal. Its capacity could provide a wide range from 8GB to 128GB for SLC, and 32GB to up to 512GB for MLC. Also it can reach more than 200MB/s read as well as 190MB/s write high performance even based on MLC flash (with 128MB mobileDDR enabled and measured by CrystalDiskMark v3.0 1000MB test unit). The power consumption of Flash Disk is also much lower than traditional Hard Drive. In addition, Advantech SQFlash 2.5" SATA-SSD provides hot-swapping abilities when removing, replacing or upgrading flash disks.

# 2. Features

#### Standard SATA interface

- Support SATA 1.5 Gbps and 3.0 Gbps interface
- SATA Revision 2.6 compliant
- Power management supported
- Operating Voltage : 5.0V
- Support 48/32/28 bit ECC correct per 2K Byte data
- Capacities
  - SLC type: 8GB, 16GB, 32GB, 64GB, 128GB
  - MLC type: 32GB, 40GB, 64GB, 128GB, 256GB, 512GB

#### ■ Performance

- SLC type
  - Sustain Read Speed up to 250 MB/s by 8 channels. 135 MB/s by 4 channels.
  - Sustain Write Speed up to 210 MB/s by 8 channels. 120 MB/s by 4 channels.
- MLC type
  - Sustain Read Speed up to 220 MB/s by 8 channels. 170 MB/s by 5 channels. 135 MB/s by 4 channels.
  - Sustain Write Speed up to 190 MB/s by 8 channels. 160 MB/s by 5 channels. 85 MB/s by 4 channels.

#### Temperature Ranges

- Commercial Temperature
  - $0^{\circ}$ C to  $70^{\circ}$ C for operating
  - -40°C to 85°C for storage
- Industrial Temperature
  - -40°C to 85°C for operating
  - -40°C to 85°C for storage

#### Mechanical Specification

- Shock: 1,500G / 0.5ms
- Vibration: 20G / 80~2,000Hz
- Humidty
  - Humidity: 5% ~ 95% under 55°€
- Endurance
  - > 2,000,000 program/erase cycles
- MTBF
  - 2,000,000 hours
- Data Retention
  - 10 years
- Acquired RoHS \ WHQL \ CE \ FCC Certificate
- Acoustic: 0 dB
- Dimension: 100 mm x 69.85 mm x 9.5 mm

## 3. **General Description**

#### Advanced NAND Flash Controller

Advantech SQFlash 2.5" SATA-SSD includes Bad Block Management Algorithm, Wear Leveling Algorithm and Error Detection / Correction Code (EDC/ECC) Algorithm.

#### Bad Block Management

Bad blocks are blocks that contain one or more invalid bits of which the reliability is not guaranteed. Bad blocks may be representing when flash is shipped and may developed during life time of the device.

Advantech SQFlash 2.5" SATA-SSD implement an efficient bad block management algorithm to detect the factory produced bad blocks and manages any bad blocks that may develop over the life time of the device. This process is completely transparent to the user, user will not aware of the existence of the bad blocks during operation.

#### Wear Leveling

NAND Type flash have individually erasable blocks, each of which can be put through a finite number of erase cycles before becoming unreliable. It means after certain cycles for any given block, errors can be occurred in a much higher rate compared with typical situation. Unfortunately, in the most of cases, the flash media will not been used evenly. For certain area, like file system, the data gets updated much frequently than other area. Flash media will rapidly wear out in place without any rotation.

Wear leveling attempts to work around these limitations by arranging data so that erasures and re-writes are distributed evenly across the full medium. In this way, no single sector prematurely fails due to a high concentration of program/erase cycles.

Advantech SQFlash 2.5" SATA-SSD provides advanced wear leveling algorithm, which can efficiently spread out the flash usage through the whole flash media area. By implement both dynamic and static wear leveling algorithms, the life expectancy of the flash media can be improved significantly.

#### ■ Error Detection / Correction

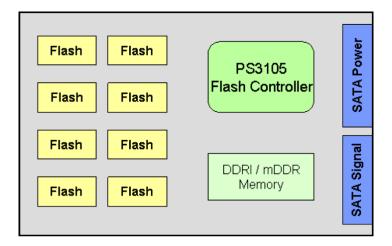

Advantech SQFlash 2.5" SATA-SSD utilizes BCH ECC Algorithm which offers one of the most powerful ECC algorithms in the industry. This algorithm can support 48/32/28 bit ECC correct per 2K Byte data.

#### Sophisticate Product Management Systems

Since industrial application require much more reliable devices compare with consumer product, a more sophisticated product management system become necessary for industrial customer requirement. The key to providing reliable devices is product traceability and failure analysis system. By implement such systems end customer can expect much more reliable product.

# Block Diagram

# ■ LBA、Cylinders、Heads、Sectors value

Density	LBA (K bytes)	Cylinders	Heads	Sectors
8 GB	15,649,200	15,525	16	63
16 GB	31,277,232	16,383	16	63
32 GB	62,533,296	16,383	16	63
64 GB	125,045,424	16,383	16	63
128 GB	250,069,680	16,383	16	63
256 GB	500,118,192	16,383	16	63
512 GB	1,000,215,216	16,383	16	63

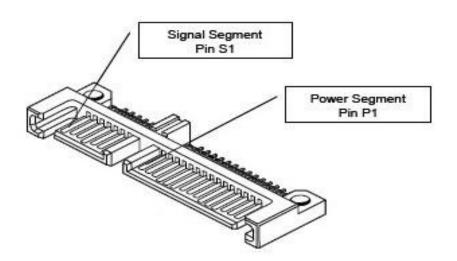

# 4. Pin Assignment and Description

4.1 2.5" SATA-SSD Interface Pin Assignments (Signal Segment)

Pin#	Function	Description
S1	GND	2 <sup>nd</sup> mate
S2	A+	Differential signal pair A
S3	A-	• .
S4	GND	2 <sup>nd</sup> mate
S5	B-	Differential signal pair D
S6	B+	Differential signal pair B
S7	GND	2 <sup>nd</sup> mate

# 4.2 2.5" SATA-SSD Interface Pin Assignments (Power Segment)

Pin#	Function
P1	Not Used (3.3V)
P2	Not Used (3.3V)
P3	Not Used (3.3V Pre-Charge)
P4	GND
P5	GND
P6	GND
P7	5V Pre-Charge
P8	5V
P9	5V
P10	GND
P11	RESERVED
P12	GND
P13	Not Used (12V Pre-Charge)
P14	Not Used (12V)
P15	Not Used (12V)

# 5. Identify Device Data

The Identity Device Data enables Host to receive parameter information from the device. The parameter words in the buffer have the arrangement and meanings defined in below table. All reserve bits or words are zero

Word Address	F: Fixed V: Variable X: Both	Default Value	Data Field Type Information	
0	F	0400h	General configuration bit-significant information	
1	Х	3FFFh	Obsolete – Number of logical cylinders (16383)	
2	V	C837h	Specific configuration	
3	Х	0010h	Obsolete – Number of logical heads (16)	
4-5	Х	00000000h	Retired	
6	Х	003Fh	Obsolete – Number of logical sectors per logical track (63)	
7-8	V	00000000h	Reserved for assignment by the Compact Flash Association	
9	X	0000h	Retired	
10-19	F	Varies	Serial number (20 ASCII characters)	
20-21	X	0000h	Retired	
22	X	0000h	Obsolete	
23-26	F	Varies	Firmware revision (8 ASCII characters)	
27-46	F	Varies	Model number (xxxxxxxxx)	
47	F	8010h	7:0- Maximum number of sectors transferred per interrupt on MULTIPLE commands	
48	F	0000h	Reserved	
49	F	2F00h	Capabilities	
50	F	4000h	Capabilities	
51-52	X	000000000h	Obsolete	
53	F	0007h	Words 88 and 70:64 valid	
54	X	3FFFh	Obsolete – Number of logical cylinders (16383)	
55	X	0010h	Obsolete – Number of logical heads (16)	
56	X	003Fh	Obsolete – Number of logical sectors per track (63)	
57-58	X	00FBFC10h	Obsolete – Current capacity in sectors –	
59	F	0110h	Number of sectors transferred per interrupt on MULTIPLE commands	
60-61	F	128GB - EE7C2B0h 64GB - 7740AB0h 32GB - 3BA2EB0h 16GB - 1DD40B0h	Total number of user addressable sectors	
62	Х	0000h	Obsolete	
63	F	0407h	Multi-word DMA modes supported/selected	
64	F	0003h	PIO modes supported	

Specifications subject to change without notice, contact your sales representatives for the most update information.

65	F	0078h	Minimum Multiword DMA transfer cycle time per word	
66	F	0078h	Manufacturer's recommended Multiword DMA transfer cycle time	
67	F	0078h	Minimum PIO transfer cycle time without flow control	
68	F	0078h	Minimum PIO transfer cycle time with IORDY flow control	
69-70	F	00000000h	Reserved	
71-74	F	000000000 000000h	Reserved for the IDENTIFY PACKET DEVICE command	
75	F	001Fh	Queue depth	
76	F	0706h	Serial SATA capabilities	
77	F	0000h	Reserved for future Serial ATA definition	
78	F	0044h	Serial ATA features supported	
79	V	0040H	Serial ATA features enabled	
80	F	01F8h	Major Version Number	
81	F	0000h	Minor Version Number	
82	F	346bh	Command set supported	
83	F	70d9h	Command set supported	
84	F	6023h	Command set/feature supported extension	
85	V	3469h	Command set/feature enabled	
86	V	bc01h	Command set/feature enabled	
87	V	6023h	Command set/feature default	
88	V	003Fh	Ultra DMA Modes	
89	F	001Eh	Time required for security erase unit completion	
90	F	001Eh	Time required for Enhanced security erase completion	
91	V	0000h	Current advanced power management value	
92	V	FFFEh	Master Password Revision Code	
93	F	0000h	Hardware reset result. The contents of the bits (12:0) of this word shall change only during the execution of s hardware reset.	
94	V	0000h	Vendor's recommended and actual acoustic management value	
95	F	0000h	Stream Minimum Request Size	
96	V	0000h	Streaming Transfer Time – DMA	
97	V	0000h	Streaming Access Latency – DMA and PIO	
98-99	F	0000h	Streaming Performance Granularity	
100-103	V	256GB - 1DCF32B0h 128GB - EE7C2B0h 64GB - 7740AB0h 32GB - 3BA2EB0h 16GB - 1DD40B0h	Maximum user LBA for 48 bit Address feature set	

104	V	0000h	Streaming Transfer Time – PIO	
105	F	0000h	Maximum number of 512-byte blocks per DATA SET MANAGEMENT command	
106	F	4000h	Physical sector size / Logical sector size	
107	F	0000h	Inter-seek delay for ISO-7779 acoustic testing in microseconds	
108-111	F	0000000000 000000h	Unique ID	
112-115	F	0000000000 000000h	Reserved	
116	V	0000h	Reserved	
117-118	F	00000000h	Words per logical Sector	
119	F	4015h	Supported settings	
120	F	4015h	Command set/Feature Enabled/Supported	
121-126	F	0h	Reserved	
127	F	0h	Removable Media Status Notification feature set support	
128	V	0021h	Security status	
129-159	Х	0h	Vendor specific	
160	F	0h	Compact Flash Association (CFA) power mode 1	
161-167	Х	0h	Reserved for assignment by the CFA	
168	F	2.5 inch – 3h 1.8 inch – 4h Less than 1.8 inch – 5h	Device Nominal Form Factor	
169	F	0001h	DATA SET MANAGEMENT command is supported	
170-173	F	0h	Additional Product Identifier	
174-175		0h	Reserve	
176-205	V	0h	Current media serial number	
206	F	0h	SCT Command Transport(	
207-208	F	0h	Reserved	
209	F	4000h	Alignment of logical blocks within a physical block	
210-211	V	0000h	Write-Read-Verify Sector Count Mode 3 (not support)	
212-213	F	0000h	Write-Read-Verify Sector Count Mode 2 (not support)	
214-216		0000h	NV Cache relate (not support)	
217	F	0001h	Non-rotating media device	
218	F	0h	Reserved	
219	F	0h	NV Cache relate (not support)	
220	V	0h	Write read verify feature set current mode	
221		0h	Reserved	
		011	. 1000. 100	
222	F	101Fh	Transport major version number	
222 223	F F			
		101Fh	Transport major version number	

234		0001h	Minimum number of 512-byte data blocks per DOWNLOAD MICROCODE command for mode 03h
235		00FFh	Maximum number of 512-byte data blocks per DOWNLOAD MICROCODE command for mode 03h
236-254	F	0h	Reserved
255	Х	XXA5h XX is variable	Integrity word (Checksum and Signature)

# 6. ATA Command Set [Command Set List]

No.	Command set	Code	Protocol	Argument
1	CHECK POWER MODE	E5h	ND	28-bit
2	DOWNLOAD MICROCODE	92h	PO	28-bit
3	EXECUTE DEVICE DIAGNOSTIC	90h	DD	28-bit
4	FLUSH CACHE	E7h	ND	28-bit
5	FLUSH CACHE EXT	EAh	ND	28-bit
6	IDENTIFY DEVICE	ECh	PI	28-bit
7	IDLE	E3h	ND	28-bit
8	IDLE IMMEDIATE	E1h	ND	28-bit
9	INITIALIZE DEVICE PARAMETERS	91h	ND	28-bit
10	NOP	00h	ND	28-bit
11	READ BUFFER	E4h	PI	28-bit
12	READ DMA	C8h,C9h	DM	28-bit
13	READ DMA EXT	25h	DM	48-bit
14	READ MULTIPLE	C4h	PI	28-bit
15	READ MULTIPLE EXT	29h	PI	48-bit
16	READ NATIVE MAX ADDRESS	F8h	ND	28-bit
17	READ NATIVE MAX ADDRESS EXT	27h	ND	48-bit
18	READ SECTOR(S)	20h,21h	PI	28-bit
19	READ SECTOR(S) EXT	24h	PI	48-bit
20	READ VERIFY SECTOR(S)	40h,41h	ND	28-bit
21	READ VERIFY EXT	42h	ND	48-bit
22	RECALIBRATE	1Xh	ND	28-bit
23	SECURITY DISABLE PASSWORD	F6h	PO	28-bit
24	SECURITY ERASE PREPARE	F3h	ND	28-bit
25	SECURITY ERASE UNIT	F4h	PO	28-bit
26	SECURITY FREEZE	F5h	ND	28-bit
27	SECURITY SET PASSWORD	F1h	PO	28-bit
28	SECURITY UNLOCK	F2h	PO	28-bit
29	SEEK	7Xh	ND	28-bit
30	SET MAX ADDRESS	F9h	ND	28-bit
31	SET MAX ADDRESS EXT	37h	ND	48-bit
32	SET FEATURE	EFh	ND	28-bit
33	SET MULTIPLE	C6h	ND	28-bit
34	SLEEP	E6h	ND	28-bit
35	SMART READ DATA	B0h		
36	SMART ENABLE/DISABLE AUTO SAVE	B0h		
37	SMART EXECUTE OFF-LINE	B0h		
38	SMART READ LOG	B0h		

Specifications subject to change without notice, contact your sales representatives for the most update information.

39	SMART ENABLE OPERATION	B0h		
40	SMART DISABLE OPERATION	B0h		
41	SMART RETURN STATUS	B0h		
42	STANDBY	E2h	ND	28-bit
43	STANDBY IMMEDIATE	E0h	ND	28-bit
44	WRITE BUFFER	E8h	PO	28-bit
45	WRITE DMA	CAh,CBh	DM	28-bit
46	WRITE DMA EXT	35h	DM	48-bit
47	WRITE MULTIPLE	C5h	PO	28-bit
48	WRITE MULTIPLE EXT	39h	PO	48-bit
49	WRITE SECTOR(S)	30h	PO	28-bit
50	WRITE SECTOR(S) EXT	34h	PO	48-bit
51	WRITE SECTOR(S) W/O ERASE	38h	PO	28-bit
52	WRITE VERIFY	3Ch	PO	28-bit

Note: ND = Non-Data Command PI = PIO Data-In Command PO = PIO Data-Out Command

DM = DMA Command

DD = Execute Diagnostic Command

#### [Command Set Descriptions]

#### 1. CHECK POWER MODE (code: E5h);

This command allow host to determine the current power mode of the device.

#### 2. DOWNLOAD MICROCODE (code: 92h);

This command enable the host to alter the device's microcode. The data transferred using the DOWNLOAD MICROCODE command is vendor specific.

All transfers shall be an integer multiple of the sector size. The size of the data transfer is determined by the content of the LBA Low register and the Sector Count register.

This allows transfer sizes from 0 bytes to 33,553,920 bytes, in 512bytes increments.

#### 3. EXECUTE DEVICE DIAGNOSTIC (code: 90h);

This command performs the internal diagnostic tests implemented by the module.

#### 4. FLUSH CACHE (code: E7h);

This command used by the host to request the device to flush the write cache.

#### 5. FLUSH CACHE EXT (code: EAh);

This command is used by the host to request the device to flush the write cache. If there is data in the write cache, that data shall be written to the media.

#### 6. IDENTIFY DEVICE (code: ECh);

The IDENTIFY DEVICE command enables the host to receive parameter information from the module.

#### 7. IDLE (code: 97h or E3h);

This command allows the host to place the module in the IDLE mode and also set the Standby timer. INTRQ may be asserted even through the module may not have fully transitioned to IDLE mode. If the Sector Count register is non-"0", then the Standby timer shall be enabled. The value in the Sector Count register shall be used to determine the time programmed into the Standby timer. If the Sector Count register is "0" then the Standby timer is disabled.

#### 8. IDLE IMMEDIATE (code: E1h);

This command causes the module to set BSY, enter the Idle (Read) mode, clear BSY and generate an Specifications subject to change without notice, contact your sales representatives for the most update information.

SQFlash 2.5" SATA-SSD

interrupt.

#### 9. INITIALIZE DEVICE PARAMETERS (code: 91h);

This command enables the host to set the number of sectors per track and the number of heads per cylinder.

#### 10. NOP (code: 00h);

If this command is issued, the module respond with command aborted.

#### 11. READ BUFFER (code: E4h);

This command enables the host to read the current contents of the module's sector buffer.

#### 12. READ DMA (code: C8h or C9h);

This command reads from "1" to "256" sectors as specified in the Sector Count register using the DMA data transfer protocol. A sector count of "0" requests "256" sectors transfer. The transfer begins at the sector specified in the Sector Number register.

#### 13. READ DMA Ext (code: 25h);

This command allows the host to read data using the DMA data transfer protocol.

#### 14. READ MULTIPLE (code: C4h);

This command performs similarly to the READ SECTORS command. Interrupts are not generated on each sector, but on the transfer of a block which contains the number of sector per block is defined by the content of word 59 in the IDENTIFY DEVICE response.

#### 15. READ MULTIPLE EXT (code: 29h);

This command performs similarly to the READ SECTORS command. The number of sectors per block is defined by a successful SET MULTIPLE command. If no successful SET MULTIPLE command has been issued, the block is defined by the device's default value for number of sectors per block as defined in bits (7:0) in word 47 in the IDENTIFY DEVICE information.

#### 16. READ NATIVE MAX ADDRESS (code: F8h);

This command returns the native maximum address. The native maximum address is the highest address accepted by the device in the factory default condition.

#### 17. READ NATIVE MAX ADDRESS EXT (code: 27h);

This command returns the native maximum address.

#### 18. READ SECTOR(S) (code: 20h or 21h);

This command reads from "1" to "256" sectors as specified in the Sector Count register. A sector count of "0" requests "256" sectors transfer. The transfer begins at the sector specified in the Sector Number register.

#### 19. READ SECTOR(S) EXT (code: 24h);

This command reads from "1" to "65536" sectors as specified in the Sector Count register. A sector count of "0" requests "65536" sectors transfer. The transfer begins at the sector specified in the Sector Number register.

#### 20. READ VERIFY SECTOR(S) (code: 40h or 41h);

This command is identical to the READ SECTORS command, except that DRQ is never set and no data is transferred to the host.

#### 21. READ VERIFY SECTOR(S) EXT (code: 42h);

This command is identical to the READ SECTORS command, except that DRQ is never set and no data Specifications subject to change without notice, contact your sales representatives for the most update information.

is transferred to the host.

#### 22. RECALIBRATE (code: 1Xh);

This command return value is select address mode by the host request.

#### 23. SECURITY DISABLE PASSWORD (code: F6h);

This command transfers 512 bytes of data from the host. Table defines the content of this information. If the password selected by word 0 match the password previously saved by the device, the device shall disable the Lock mode. This command shall not change the Master password. The Master password shall be reactivated when a User password is set.

#### 24. SECURITY ERASE PREPARE (code: F3h);

This command shall be issued immediately before the SECURITY ERASE UNIT command to enable device eraseing and unlocking.

#### 25. SECURITY ERASE UNIT (code: F4h);

This command transfer 512 bytes of data from the host. Table## defines the content of this information. If the password does not match the password previously saved by the device, the device shall reject the command with command aborted.

The SECURITY ERASE PREPARE command shall be completed immediately prior to the SECURITY ERASE UNIT command.

#### 26. SECURITY FREEZE LOCK (code: F5h);

This command shall set the device to frozen mode. After command completion any other commands that update the device Lock mode shall be command aborted. Frozen shall be disabled by power-off or hardware reset.

If SECURITY FREEZE LOCK is issued when the drive is in frozen mode, the drive executes the command and remains in frozen mode.

#### 27. SECURITY SET PASSWORD (code: F1h);

This command transfer 512 bytes of data from the host. Table defines the content of this information. The data transferred controls the function of this command. Table defines the interaction of the identifier and security level bits.

#### 28. SECURITY UNLOCK (code: F2h);

This command transfer 512 bytes of data from the host. Table (as Disable Password) defines the content of this information.

If the Identifier bit is set to Master and the device is in high security level, then the password supplied shall be compared with the stored Master password. If the device is in maximum security level then the unlock shall be rejected.

If the identifier bit is set to user then the device shall compare the supplied password with the stored User password.

If the password compare fails then the device shall return command aborted to the host and decrements the unlock counter. This counter shall be initially set to five and shall be decremented for each password mismatch when SECURITY UNLOCK is issued and the device is locked. When this counter reachs zero then SECURITY UNLOCK and SECURITY ERASE UNIT command shall be aborted unitl a power-on or a hardware reset.

#### 29. SEEK (code: 7Xh);

This command performs address range check.

#### 30. SET MAX ADDRESS (code: F9h);

After successful command completion, all read and write access attempts to address greater than specified by the successful SET MAX ADDRESS command shall be rejected with an IDNF error. IDENTIFY DEVICE response words (61:60) shall reflect the maximum address set with this command.

Specifications subject to change without notice, contact your sales representatives for the most update information.

#### 31. SET MAX ADDRESS EXT (code: 37h);

After successful command completion, all read and write access attempts to address greater than specified by the successful SET MAX ADDRESS command shall be rejected with an IDNF error. IDENTIFY DEVICE response words (61:60) shall reflect the maximum address set with this command.

#### 32. SET FEATURE (code: EFh);

This command is used by the host to establish parameters that affect the execution of certain device features.

#### 33. SET MULTIPLE MODE (code: C6h);

This command enables the device to perform READ and Write Multiple operations and establishes the block count for these commands.

#### 34. SLEEP (code: 99h or E6h);

This command causes the module to set BSY, enter the Sleep mode, clear BSY and generate an interrupt.

#### 35. SMART READ DATA (code: B0h with Feature register value of D0h);

This command returns the Device SMART data structure to the host.

#### 36. SMART ENABLE/DISABLE AUTO SAVE (code: B0h with Feature register value of D2h);

This command enables and disables the optional attribute autosave feature of the device.

#### 37. SMART EXECUTE OFF\_LINE (code: B0h with Feature register value of D4h);

This command cause the device to immediately initiate the optional set of activities that collect SMART data in an off-line mode and then save this data to the device's non-volatile memory, or execute a self-diagnostic test routine in either captive or off-line mode.

#### 38. SMART READ LOG (code: B0h with Feature register value of D5h);

This command returns the specified log data to the host.

#### 39. SMART ENABLE OPERATION (code: B0h with Feature register value of D8h);

This command enables access to all SMART capabilities within the device. Prior to receipt of this command SMART data are neither monitored nor saved by the device.

#### 40. SMART DISABLE OPERATION (code: B0h with Feature register value of D9h);

This command disables all SMART capabilities within the device including any and all timer and event count functions related exclusively to this feature. After command acceptance the device shall disable all SMART operations.

After receipt of this command by the device, all other SMART commands including SMART DISABLE OPERATION commands, with exception of SMART ENABLE OPERATIONS, are disabled and invalid and shall be command aborted by the device.

#### 41. SMART RETURN STATUS (code: B0h with Feature register value of DAh);

This command cause the device to communicate the reliability status of the device to the host.

#### 42. STANDBY (code: E2h);

This command causes the module to set BSY, enter the Standby mode, clear BSY and return the interrupt immediately.

#### 43. STANDBY IMMEDIATE (code: E0h);

This command causes the module to set BSY, enter the Standby mode, clear BSY and return the interrupt immediately.

#### 44. WRITE BUFFER (code: E8h);

This command enables the host to overwrite contents of the module's sector buffer with any data pattern desired.

#### 45. WRITR DMA (code: CAh or CBh);

This command writes from "1" to "256" sectors as specified in the Sector Count register using the DMA data transfer protocol. A sector count of "0" requests "256" sectors transfer. The transfer begins at the sector specified in the Sector Number register.

#### 46. WRITR DMA EXT (code: 35h);

This command writes from "1" to "65536" sectors as specified in the Sector Count register using the DMA data transfer protocol. A sector count of "0" requests "65536" sectors transfer. The transfer begins at the sector specified in the Sector Number register.

#### 47. WRITE MULTIPLE (code: C5h):

This command is similar to the WRITE SECTORS command. Interrupts are not presented on each sector, but on the transfer of a block which contains the number of sectors defined by Set Multiple command.

#### 48. WRITE MULTIPLE EXT (code: 39h);

This command is similar to the WRITE SECTORS command. Interrupts are not presented on each sector, but on the transfer of a block which contains the number of sectors defined by Set Multiple command.

#### 49. WRITE SECTOR(S) (code: 30h);

This command writes from "1" to "256" sectors as specified in the Sector Count register. A sector count of "0" requests "256" sectors transfer. The transfer begins at the sector specified in the Sector Number register.

#### 50. WRITE SECTOR(S) EXT (code: 34h);

This command writes from "1" to "65536" sectors as specified in the Sector Count register. A sector count of "0" requests "65536" sectors transfer. The transfer begins at the sector specified in the Sector Number register.

#### 51. WRITE SECTOR(S) W/O ERASE (code: 38h);

This command writes from "1" to "256" sectors as specified in the Sector Count register. A sector count of "0" requests "256" sectors transfer. The transfer begins at the sector specified in the Sector Number register.

#### 52. WRITE VERIFY (code: 3Ch);

This command is similar to the WRITE SECTOR(S) command, except that each sector is verified before the command is completed.

# 7. System Power Consumption

# 7.1 Supply Voltage

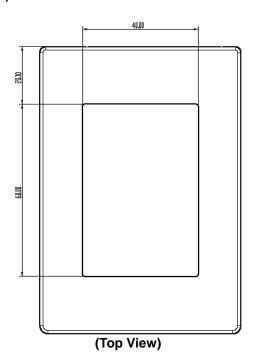

Parameter	Rating
Operating Voltage	5V +/- 5%
Max. Ripple	100mV, 0~30MHz

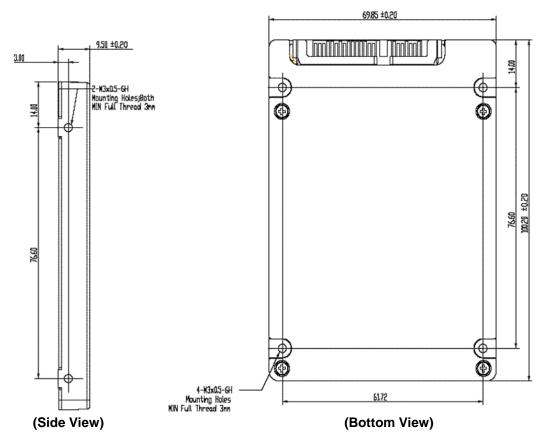

# 7.2 Power Consumption

Parameter	Value
Standby	0.2W
Read Operating	4.7W
Write Operation	1.4W

# 8. Physical Dimension 2.5" SATA SSD (Unit: mm)

# **Appendix: Part Number Table**

Product	Advantech PN
SQF 2.5" SATA SSD 8G SLC (0~70°C)	SQF-S25S4-8G-S5C
SQF 2.5" SATA SSD 16G SLC (0~70°C)	SQF-S25S8-16G-S5C
SQF 2.5" SATA SSD 32G SLC (0~70°C)	SQF-S25S8-32G-S5C
SQF 2.5" SATA SSD 64G SLC (0~70°C)	SQF-S25S8-64G-S5C
SQF 2.5" SATA SSD 128G SLC (0~70°C)	SQF-S25S8-128G-S5C
SQF 2.5" SATA SSD 8G SLC (-40~85°C)	SQF-S25S4-8G-S5E
SQF 2.5" SATA SSD 16G SLC (-40~85°C)	SQF-S25S8-16G-S5E
SQF 2.5" SATA SSD 32G SLC (-40~85°C)	SQF-S25S8-32G-S5E
SQF 2.5" SATA SSD 64G SLC (-40~85°C)	SQF-S25S8-64G-S5E
SQF 2.5" SATA SSD 128G SLC (-40~85°C)	SQF-S25S8-128G-S5E
SQF 2.5" SATA SSD 16G MLC (0~70°C)	SQF-S25M4-16G-S5C
SQF 2.5" SATA SSD 32G MLC (0~70°C)	SQF-S25M8-32G-S5C
SQF 2.5" SATA SSD 40G MLC (0~70°C)	SQF-S25M5-40G-S5C
SQF 2.5" SATA SSD 64G MLC (0~70°C)	SQF-S25M8-64G-S5C
SQF 2.5" SATA SSD 128G MLC (0~70°C)	SQF-S25M8-128G-S5C
SQF 2.5" SATA SSD 256G MLC (0~70°C)	SQF-S25M8-256G-S5C
SQF 2.5" SATA SSD 512G MLC (0~70°C)	SQF-S25M8-512G-S5C
SQF 2.5" SATA SSD 16G MLC (-40~85°C)	SQF-S25M4-16G-S5E
SQF 2.5" SATA SSD 32G MLC (-40~85°C)	SQF-S25M8-32G-S5E
SQF 2.5" SATA SSD 40G MLC (-40~85°C)	SQF-S25M5-40G-S5E
SQF 2.5" SATA SSD 64G MLC (-40~85°C)	SQF-S25M8-64G-S5E
SQF 2.5" SATA SSD 128G MLC (-40~85°C)	SQF-S25M8-128G-S5E
SQF 2.5" SATA SSD 256G MLC (-40~85°C)	SQF-S25M8-256G-S5E
SQF 2.5" SATA SSD 512G MLC (-40~85°C)	SQF-S25M8-512G-S5E
