

TOSHIBA CCD LINEAR IMAGE SENSOR CCD(Charge Coupled Device)

TCD1201D

The TCD1201D is a high sensitive and low dark current 2048-elements linear image sensor. The sensor can be used for POS handscanner.

The device is operated by only 5V power supply, and mounted in 22-pin cerdip package with hermetic sealed optical glass window.

FEATURES

- Number of Image Sensing Elements : 2048
- Image Sensing Element Size : 14μm by 200μm on 14μm centers
- Photo Sensing Region : High sensitive and low dark current pn photodiode
- Clock : 2 phase (5V)
- Package : 22 pin cerdip

Weight : 4.4g (Typ.)

MAXIMUM RATINGS (Note 1)

CHARACTERISTIC	SYMBOL	RATING	UNIT
Clock Pulse Voltage	V_{ϕ}	- 0.3~8	V
Shift Pulse Voltage	V_{SH}		V
Reset, Boost Pulse Voltage	V_{RS}, V_{BT}		V
Power Supply Voltage	V_{OD}		V
Operating Temperature	T_{opr}	- 25~60	°C
Storage Temperature	T_{stg}	- 40~100	°C

(Note 1) All voltage are with respect to SS terminals (Ground).

● TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.

(Note 2) Sensitivity for LED (660nm) is 600V / lx·s (Typ.)

(Note 3) Measured at 50% of SE (Typ.)

$$\text{Definition of PRNU : PRNU} = \frac{\Delta \bar{x}}{\bar{x}} \times 100 (\%)$$

Where $\bar{x}$ is average of total signal outputs and $\Delta \bar{x}$ is the maximum deviation from $\bar{x}$ under uniform illumination.

(Note 4) V_{SAT} is defined as minimum saturation output voltage of all effective pixels.

$$\text{(Note 5) Definition of SE : SE} = \frac{V_{SAT}}{R} \text{ (lx·s)}$$

(Note 6) V_{MDK} is defined as maximum dark signal voltage of all effective pixels.

(Note 7) Definition of DR : $DR = \frac{V_{SAT}}{V_{MDK}}$

V_{MDK} is proportional to t_{INT} (Integration Time).

So the shorter t_{INT} condition makes wider DR value.

(Note 8) DC signal output voltage and DC compensation output voltage are defined as follows:

TYPICAL DRIVE CIRCUIT

CAUTION**1. Window Glass**

The dust and stain on the glass window of the package degrade optical performance of CCD sensor.

Keep the glass window clean by saturating a cotton swab in alcohol and lightly wiping the surface, and allow the glass to dry, by blowing with filtered dry N₂.

Care should be taken to avoid mechanical or thermal shock because the glass window is easily to damage.

2. Electrostatic Breakdown

Store in shorting clip or in conductive foam to avoid electrostatic breakdown.

3. Incident Light

CCD sensor is sensitive to infrared light.

Note that infrared light component degrades resolution and PRNU of CCD sensor.

4. Lead Frame Forming

Since this package is not stout against mechanical stress, you should not reform the lead frame.

We recommend to use a IC-inserter when you assemble to PCB.
