

DATA SHEET

SKY12324-73LF: 0.5-4.0 GHz Two-Bit Digital Attenuator (4 dB LSB)

Applications

- Cellular telephone base stations
- Test instrumentation
- Wireless data level control circuits

Features

- Four dB LSB steps to 12 dB
- Single, positive control voltage per bit
- Low insertion loss
- Small SOT-6 package (MSL1, 260 °C per JEDEC J-STD-020)

Skyworks offers lead (Pb)-free, RoHS (Restriction of Hazardous Substances)-compliant packaging.

Description

The SKY12324-73LF is a two-bit GaAs pHEMT digital attenuator in a low-cost SOT-6 package. The two attenuation bits, 4 and 8 dB, can be independently switched into or out of the signal path according to the magnitudes of the control voltages applied to the two high impedance control voltage inputs. The RF ports are internally matched to 50 Ω and are fully bilateral.

The SKY12324-73LF is ideally suited for use in applications where excellent attenuation accuracy, low insertion loss, and excellent intermodulation distortion performance are required.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

Table 1. SKY12324-73LF Signal Descriptions

Pin #	Name	Description	Pin #	Name	Description
1	J2	RF port. Must be DC blocked.	4	V1	DC control voltage. High input impedance control port for the 8 dB bit. The high control voltage applied to this pin must be within 0.2 V of the supply voltage applied to pin 3 or the part may be permanently damaged. The low control voltage is 0 V nominal.
2	GND	RF ground. Must be AC-coupled to ground.	5	N/C	No connect
3	J1	RF port. Must be DC blocked.	6	V2	DC control voltage. High input impedance control port for the 4 dB bit. The high control voltage applied to this pin must be within 0.2 V of the supply voltage applied to pin 3 or the part may be permanently damaged. The low control voltage is 0 V nominal.

Table 2. SKY12324-73LF Absolute Maximum Ratings

Parameter	Symbol	Minimum	Maximum	Units
RF input power ($V_{CTL} = 0/8$ V)	P_{IN}		+31	dBm
Supply voltage	V_S		8	V
Control voltage	V_{CTL}	−0.2	+8.0	V
Operating temperature	T_{OP}	−40	+85	°C
Storage temperature	T_{STG}	−65	+150	°C

Note: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY12324-73LF are provided in Table 2. Electrical specifications are provided in Table 3.

Typical performance characteristics of the SKY12324-73LF are illustrated in Figures 3 through 8.

The state of the SKY12324-73LF is determined by the logic provided in Table 4.

Evaluation Board Description

The SKY12324-73LF Evaluation Board is used to test the performance of the SKY12324-73LF digital attenuator. An assembly drawing for the Evaluation Board is shown in Figure 9. A schematic diagram is shown in Figure 10.

Package Dimensions

The PCB layout footprint for the SKY12324-73LF is provided in Figure 11. Figure 12 shows the package dimensions for the 6-pin SOT-6, and tape and reel dimensions are provided in Figure 13.

Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

THE SKY12324-73LF is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.
