AP1119

0.5A Positive Low Dropout Fixed-Mode Regulator With EN Function

■ Features

- 1.3V maximum dropout at full load current
- Fast transient response
- Output current limiting
- Built-in thermal shutdown
- Packages: SOT89-5L
- Good noise rejection
- 5-Terminal device with fixed 1.5V, 1.8V, 2.5V, 3.3V, 5.0V, 9.0V, 12V output.

■ Applications

- PC peripheral
- Communication
- CDROM..

■ General Description

AP1119 is a low dropout positive adjustable or fixed-mode regulator with minimum of 0.5A output current capability. The product is specifically designed to provide well-regulated supply for low voltage IC applications such as high-speed bus termination and low current 3.3V logic supply. AP1119 is also well suited for other applications such as VGA cards. AP1119 is guaranteed to have <1.3V dropout at full load current making it ideal to provide well regulated fixed outputs of 1.5 to 12V with up to 18V input supply. The AP1119 offers a TTL – Logic compatible enable pin.

■ Pin Descriptions

NAME	FUNCTION
GND	Ground
Vout	The output of the regulator. A minimum of 10uF capacitor must be connected from this pin to ground to insure stability.
Vin	The input pin of regulator. Typically a large storage capacitor is connected from this pin to ground to insure that the input voltage does not sag below the minimum dropout voltage during the load transient response. This pin must always be 1.3V higher than Vout in order for the device to regulate properly.
EN	The input pin of regulator. TTL/CMOS compatible input Logic high = disable output, Logic Low or open =Enable output. (internal Pull-down resistor ~ 100K).

Note1: See thermal regulation specifications for changes in output voltage due to heating effects. Line and load regulation are measured at a constant junction temperature by low duty cycle pulse testing. Load regulation is measured at the output lead = 1/18" from the package.

Note2: Line and load regulation are guaranteed up to the maximum power dissipation of 5W. Power dissipation is determined by the input/output differential and the output current. Guaranteed maximum power dissipation will not be available over the full input/output range.

Note3: Quiescent current is defined as the minimum output current required maintain regulation. At 12V input/output differential the device is guaranteed to regulate if the output current is greater than 10mA.

Technical drawing of a mechanical part, showing a top view and a side view. The top view is a rectangle with a central vertical slot and two side slots. The side view is a trapezoid with a central vertical slot and two side slots. Dimensions are labeled as follows:

- A: Total width of the top view.
- B: Total height of the side view.
- C: Width of the central slot in the top view.
- D: Width of the central slot in the side view.
- E: Height of the central slot in the side view.
- F: Height of the side slots in the side view.
- G: Total width of the side view.
- H: Width of the central slot in the side view.
- I: Width of the side slots in the side view.
